Preferred Rwy 17/35. Rgt hand circuits Rwy 17 & 26 (CAR 602.96). Fixed-wing circuit alt 5000 ASL; acft climb rwy hdg to 4500' before turning. Circuit tng flts & maint engine run-ups proh 06-14Z†. Maint engine run-ups proh on main apron. Aprt ltd to propeller driven acft and chapter 3 jets 40,000 lbs GTOW max wingspan 79'. Ctc opr for noise abatement procedures. See VTA & Planning section for Cremona CFA & Pigeon CFA.

ATS REQUIREMENTS:

Pilots to close VFR flt plns with Edmonton FIC (phone or FISE freq) when practicable or request closure from ATC.

ARRIVALS:

All arrivals fr north, south or west are to report at 6000 ASL prior to entering Class C airspace in reference to VFR Call-up or VFR Check points.

All arrivals fr Calgary are to report at Crowfoot Centre at 5500 ASL.

Arrivals from CYA 226/227:

For Rwy 08 (South Ghost Route): Report Ghost Lake Village, not below 6000 ASL. From the village fly southeast to Jumpingpound Gas Plant then intercept final approach over Highway 22.

For Rwy 17 (North Ghost Route): Report Wildcat Gas Plant, not below 6000 ASL. From the Wildcat Gas Plant, fly southeast along the Bow River to Cochrane. Continue southeast to join right base.

For Rwy 26 (North Ghost Route): Report Wildcat Gas Plant, not below 6000 ASL. From the Wildcat Gas Plant fly southeast along the Bow River to Cochrane. Turn towards the control tower to intercept right downwind.

For Rwy 35 (South Ghost Route): Report Ghost Lake Village, not below 6000 ASL. From the village fly southeast to Jumpingpound Gas Plant then towards the control tower to intercept left downwind.

DEPARTURES:

All departures to the north, south and west: Expect routings via Lochend Lake, Elbow Springs, Roundabout, Petrocan, Cochrane Lake, or as directed by ATC

To Calgary: as directed by ATC.

Rwy 08/Rwy 35 (North Ghost Route): Follow the Bow River to Cochrane then to Wildcat Gas Plant.

Rwy 17 (South Ghost Route): Fly to the Petrocan Gas Station then northwest to Jumpingpound Gas Plant until over Ghost Lake Village.

Rwy 26 (South Ghost Route): Climb straight out to Highway 22 then northwest to Jumpingpound Gas Plant until over Ghost Lake Village.

HELI PRO:

All heli ctc grp control freq 121.8 for dep instructions. No hover tng adj to active rwys. Hover tng & arr/dep not auth on uncontrolled twys.

Arr/dep: Pads A&C, Twys A, C & D north of C, Rwy

All heli dep to follow published routes unless auth by twr.

Heli circuits: Rwy 08 active - use Rwy 08 circuit or use circuit to thld Rwy 35.

Rwy 17/35 active - use Rwy 26 circuit or use circuit to active rwy.

Rwy 26 active - use Rwy 26 circuit or use circuit to thld Rwy 17 at 4500 ASL or below.

Bragg Route I/B - proceed to Elbow Springs remaining south of hwy 8 then direct the tower remaining east of 17/35 centreline, altitude assigned by ATC.

Bragg Route O/B - proceed to Elbow Springs remaining east of 17/35 centreline then westbound south of hwy 8, altitude assigned by ATC.

NOISE:

Aircraft to maintain 5500' til commencing final descent. Avoid overflight of noise sensitive areas.

CAUTION

Narrow twys, high volume fixed-wing acft; heli acft use twys A, C & D north of C for tkof & ldg. Bird activity and wildlife in vic of A/D.

ALBERTA**AERODROME/FACILITY DIRECTORY****CALGARY / YYC CALGARY INTL AB (Cont'd)****CYYC****PRO (Cont'd)****DE-ICING PROCEDURES:**

1. Contact CALGARY DE-ICE on 129.5 for assignment to EAST or WEST pad no later than 30 min prior push-back with aircraft type and the type of treatment required.
2. Follow normal push-back procedures and advise Apron Advisory EAST or WEST DE-ICE pad has been assigned.
3. East Pad - Enter from Twy J at Twy JQ. When instructed by GROUND CONTROL, contact PAD CONTROL on 129.125 prior to entering pad.
4. West Pad - Enter from Twy J at Twy JV. When instructed by GROUND CONTROL, contact PAD CONTROL on 122.35 prior to entering pad.
5. Follow PAD CONTROL instructions, signboards and guidance lines to the assigned staging position or de-icing bay and confirm "BRAKES SET" when in position with nosewheel on stopbar.
Caution: The wingtip to tail clearance for acft taxiing in the EAST pad from JQ behind staged acft is only assured when the staged acft nosewheel is on the stopbar as guided by the signboards.
6. If assigned a staging bay, monitor PAD CONTROL until further instructed.
7. When directed by PAD CONTROL, contact ICEMAN (East 123.025, West 122.725) and confirm "BRAKES SET, AIRCRAFT CONFIGURED FOR DE-ICE."
8. When de-ice is complete, do not move aircraft. When directed by ICEMAN, contact PAD CONTROL on assigned frequency.
9. Advise PAD CONTROL when ready to taxi. PAD CONTROL will assign appropriate GROUND CONTROL frequency to obtain taxi clearance.
10. Queuing is not permitted on Twy J, staging positions are provided on both EAST and WEST pads, reference DE-ICE Facility diagram.

See CAP for additional directions & restrictions.

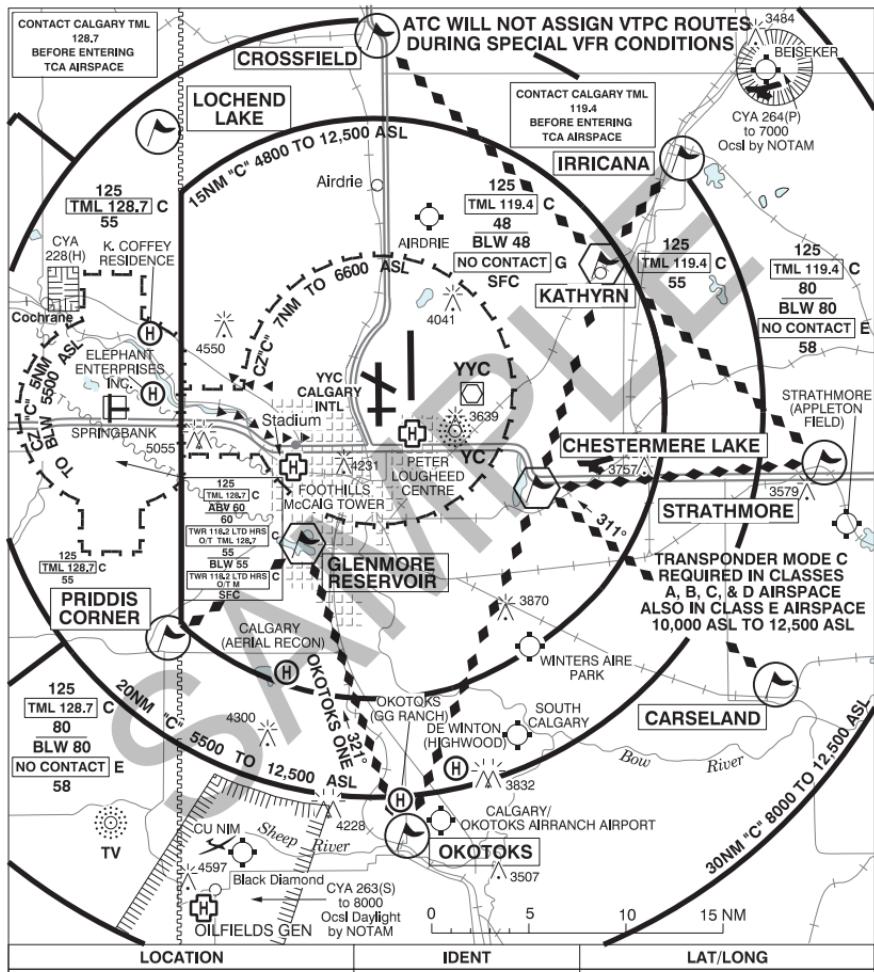

CAUTION

Coyotes at large on apt. Extv waterfowl activity vic A/D year round.

Rgt hand circuits Rwy 30 (CAR 602.96). TRANSPONDER MANDATORY - Acft operating in Edmonton Class C require a discrete transponder code which may be obtained by filing a flt plan or itinerary or ctc 888-358-7526 at least 30 min prior to entering. Pilots to close VFR flt plans with Edmonton FIC (phone or FISE freq) when practicable or request closure fr ATC. For VFR routes see Edmonton VTPC or as directed by ATC.

NOISE ABATEMENT:

Turbo jet/Turbo fan acft

DEP: All Rwy NADP 1 or 2 (Noise Abatement Dep Proc). Rwy 12 no rgt turns W of the "LEDUC" NDB.

ARR: Avoid flying over the Town of Leduc below 5000' ASL.

REDUCED VISIBILITY PROCEDURES (RVR less than 2600 to 1200 ft)

If any portion of the airport drops below $\frac{1}{2}$ SM or 2600 RVR but is at or above $\frac{1}{4}$ SM or 1200 RVR, the airport is considered to be operating in RVOP with no restrictions to aircraft or vehicles.

If any portion of the airport drops below $\frac{1}{4}$ SM or 1200 RVR, provided the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR, the following procedures shall be implemented:

- Any runway that is below $\frac{1}{4}$ SM or 1200 RVR will not be used for arrivals or departures.
- Restrictions apply to vehicles and aircraft on the manoeuvring area. Only one aircraft, helicopter or vehicle will be given permission to operate on the manoeuvring area at any given time (except as permitted below under Vehicle Exceptions).
- Towing of aircraft on the manoeuvring area is not permitted

Departures

An aircraft may be taxied for departure if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility drops below $\frac{1}{4}$ SM or 1200 RVR after taxi clearance was issued, the aircraft may continue to taxi.

An aircraft may depart during RVOP operations provided the RVR serving the departure runway is at or above $\frac{1}{4}$ SM or 1200 RVR.

Arrivals

An aircraft may land and taxi if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

Arrivals will be in accordance with applicable approach minima or approach ban considerations. After landing, the aircraft may taxi provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility for the runway of intended use drops below $\frac{1}{4}$ SM or 1200 RVR after an arriving aircraft crosses the final approach fix (FAF), the aircraft may land and taxi in.

ATS REQUIREMENTS:

PPR for all photo flt or survey work in Class C airspace within 35NM of CYEG. Map of survey/photo flt area rqrd. CTC ATC 1-888-358-7526 at least 2 hrs prior to ETD.

ALBERTA

AERODROME/FACILITY DIRECTORY

EDMONTON INTL AB (Cont'd)

CYEG

PRO

Vehicle Exceptions

A group of vehicles may be considered one movement provided they are traveling together and use a single call sign.

Vehicles are permitted to operate on an inactive runway. Once vehicles are established and restricted to remain on the inactive runway, RVOP may resume on the remaining manoeuvring area.

Emergency vehicles responding to emergency situations are exempt.

FLIGHT TRAINING RESTRICTIONS:

Circuits not auth. PPR for IFR and simulated IFR tng flts, ctc ATC 888-358-7526 no more than 24 hrs prior to ETD. Tng flts rstd to medium wt category or greater.

HELI OPS:

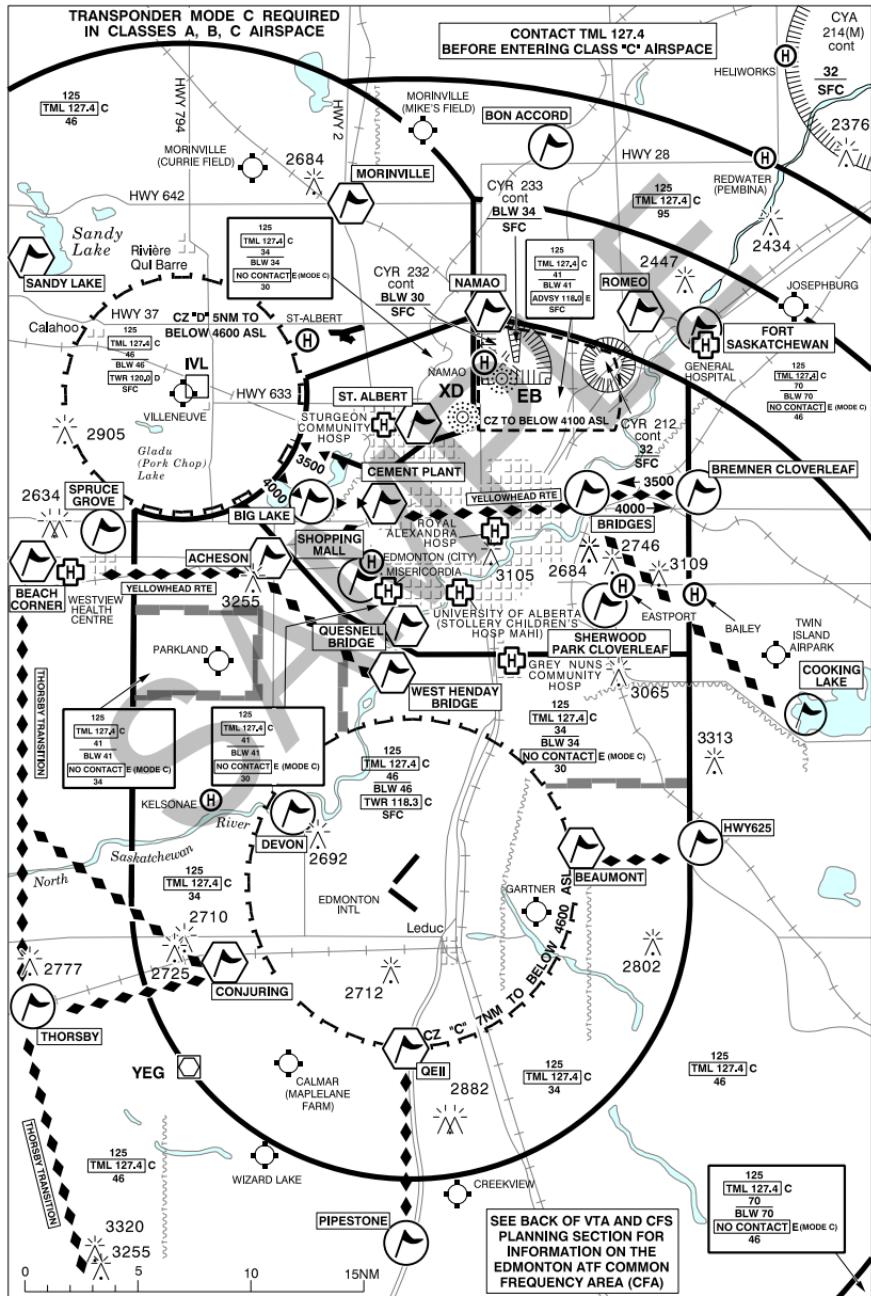

All heli ctc gnd ctl for dep instructions.

Due to high density ops on Apron II, heli flt over Twy S restricted to 100 AGL or above.

Avoid flt over acft or pedestrians.

COMMON FREQUENCY AREA:

Within 25NM of CYQF, and outside of the CZ/MF, pilots should familiarize themselves with the use of the Alberta - Red Deer Common Frequency Area (see CFS Planning Section) and use the common frequency 122.875.

ARRIVAL PROCEDURES

Obtain the ATIS message on 124.0 prior to establishing contact on 118.5.

If able, pilots are required to turn on navigation, anti-collision, and landing lights while operating within the CZ/MF.

During Class D operations (13-05Z‡), pilots are expected to follow the inbound instructions assigned by CYQF Tower.

During Class E operations (05-13Z‡), pilots are expected to advise CYQF Radio of their arrival intentions.

Arriving aircraft are expected to enter the CZ/MF at 4000 ASL.

Fixed wing aircraft operating at speeds of 120 knots or greater are expected to join a 10NM straight-in final approach.

Fixed wing aircraft operating at speeds less than 120 knots are expected to fly the appropriate inbound VFR route and to join the circuit as published based on the runway being used.

VFR Routes from the N-E-S

Runway 12 & 17:

Fly inbound via the appropriate route to SLACKS then direct CYQF to join the circuit via UPWIND and RIGHT DOWNWIND.

Runway 30 & 35:

Fly inbound via the appropriate route to SLACKS then direct CYQF to join the circuit via UPWIND and LEFT DOWNWIND.

ALBERTA**AERODROME/FACILITY DIRECTORY****RED DEER VFR TERMINAL PROCEDURES CHART (Cont'd)****VFR Routes from the SW-W-NW**

Runway 12:

Fly inbound via the COLONY route to join RIGHT BASE.

Runway 17:

Fly inbound via the COLONY route to join RIGHT DOWNWIND.

Runway 30:

Fly inbound via the COLONY route to join LEFT DOWNWIND.

Runway 35

Fly inbound via the SYLVAN route to join LEFT DOWNWIND.

CIRCUIT ENTRY PROCEDURES

When approaching the runway from the upwind side, join the downwind leg abeam a point approximately midway between each end of the runway.

DEPARTURE PROCEDURES

To reduce the risk of conflict with aircraft inbound, aircraft departing the circuit are expected to fly on runway heading until above 4000 ASL before commencing a turn in any direction.

TRANSITING THE ZONE

Due to potentially high volumes of traffic and increased frequency congestion, pilots are encouraged to fly above or around the zone.

If flight through the zone is necessary, transiting aircraft should remain east of the airport and follow HWY 2 (Queen Elizabeth II) at an altitude NOT BELOW 5000 ASL to minimize potential conflicts with other aircraft in the circuit, and traffic transiting to and from the training areas.

A2 GENERAL**SPECIAL NOTICES**

This space will be used to direct the attention of subscribers to new or amended procedures. Notices will normally be carried for two issues. In the event that there are no special notices, the word "NONE" will be centered within the SPECIAL NOTICES box. Special notices applicable to the military only will be preceded by the word "MILITARY".

Aircraft Group Number (AGN)

As a result of changes introduced to the TP312 5th Edition - AERODROME STANDARDS and RECOMMENDED PRACTICES, aeronautical publications will be updated to include information on the certification level of the various parts of the airport. This will be accomplished through the use of Aircraft Group Number or 'AGN' methodology. The purpose of AGN is to provide a simple method for relating key aerodrome technical specifications with the characteristics of the critical aircraft for which the aerodrome or part thereof is provided. These characteristics include:

- (a) Wingspan (with consideration of the aircraft approach speed category);
- (b) Outer main gear span; and
- (c) Tail height.

NOTE: The outer main gear width is the aircraft characteristic relating to runway and taxiway widths, wingspan relates to taxiway strip widths, and wingspan with an approach speed consideration relates to runway strip and safety area widths.

- (1) Depending on the airfield element being addressed, an aircraft may have more than one AGN; due to physical aircraft characteristics (wing span, outer main gear span), or approach speed influence;
- (2) AGN information will be included in the Canada Flight Supplement within the relevant RWY CERT and TWY CERT sections;
- (3) All certified airport operators will be required to submit an update regarding the certification level of the various parts of the certified aerodrome (airport). This is necessary so that aircrews may ascertain the aerodrome as being "...suitable for the intended operation" as currently required under 602.96 (2) (b) of the CAR.

The application of these changes to Aerodrome/Facility Directory, Section B of the CFS will occur after January 3rd, 2019.

This special notice will remain published until amendments to Section B of the CFS are complete.

Publication of Private Meteorological Reports and Services Information

Starting October 10, 2019, NAV CANADA will be amending the depiction in the CFS for meteorological reports and services provided by private meteorological service providers.

Users can expect to see changes to the FLT PLN - WX section for individual aerodromes in accordance with the changes outlined in Section A - GENERAL.

As new data continues to be received from each aerodrome that provides private meteorological services, publishing of the new specified format for any given aerodrome may not have occurred yet. It is recommended that users confirm ahead with the aerodrome operator the type and availability of meteorological reports and services that can be received by UNICOM (AU) while this special notice is in effect.

For more information about these changes, consult the WEATHER SERVICES - OBSERVATIONS in Section A - GENERAL.

This Special Notice will remain in effect until publication changes have been completed for all aerodromes with private meteorological service providers.

Modification of Distance and Bearing of Significant Obstructions to Nearest Community

Effective 5 November 2020 there will be a modification to CFS Planning section for Significant Obstructions

Previously, under "Location", this section provided distance and direction to the nearest **community**. The section now provides distance and direction to the nearest **aerodrome**.

A6 GENERAL**PREFACE**

The Canada Flight Supplement is a joint civil/military publication issued every 56 days. It contains information on land and some water aerodromes and is used as a reference for the planning and safe conduct of air operations. It is published and produced by NAV CANADA's Aeronautical Information Services and distributed by NAV CANADA's Aeronautical Publication Sales and Distribution Unit. The distribution for DND is through the Canadian Forces Publication Depot.

The information contained in this supplement is current only to the date of submission for printing. A NOTAM may amend or cancel the information in this document, therefore the NOTAM must be consulted to ensure that current information is used for flight operations.

To alert users of new information or changes to information in the B section from the previous issue, a vertical line will be portrayed to the left and extending the full length of the new/revised data.

CORRECTIONS (CIVIL)

NAV CANADA is responsible for all Canadian civil aeronautical information, however, the Canadian Aviation Regulations make it mandatory for aerodrome operators to report all changes to the CFS information to the Minister of Transport. To that end, correspondence can be sent to one of the following Transport Canada addresses.

Pacific Region

- Transport Canada
Aerodrome Safety
400-3600 Lysander Lane
Richmond, BC V7B 1C3
Tel: 604-666-8777 Fax: 855-618-6288

NAV CANADA is responsible for all Canadian civil aeronautical information. Any publication errors, omissions, anomalies, suggestions or comments on the air navigation system can be passed through any ATS facility or directly through our Customer and Stakeholder Services at:

NAV CANADA
Customer and Stakeholder Services
77 Metcalfe Street
Ottawa, ON K1P 5L6
Tel: 1-800-876-4693 (within North America)
Fax: 1-613-563-3426
E-mail: service@navcanada.ca
Regular hours of operation 0800-1800 (EST/EDT)

All aeronautical data questions should be directed to:

NAV CANADA
AIS Data Collection
PO BOX 9824 STN T CSC
OTTAWA ON K1G 9Z9
Tel: 1-866-577-0247
Fax: 1-613-248-4093
E-mail: aisdata@navcanada.ca

CORRECTIONS (MILITARY)

Military commanders are responsible for inspecting entries covering facilities under their jurisdiction. They are to submit corrections by e-mail at: aso@forces.gc.ca. Tel: 613-248-4129/4130/4117.

COMMENTS ON AIR NAVIGATION SYSTEM

To report any concerns about the safety or quality of services provided by NAV CANADA please contact the local NAV CANADA Site Manager or Customer and Stakeholder Services at:

NAV CANADA Customer and Stakeholder Services
Tel: 1-800-876-4693
(within North America)
Fax: 1-613-563-3426
E-mail: service@navcanada.ca
Regular hours of operation: 0800-1800 (EST/EDT)

CHANGE OF ADDRESS (CIVIL PILOTS)

Write to: NAV CANADA, Aeronautical Publications, Sales & Distribution Unit, P.O. Box 9840, Station T, Ottawa ON, Canada K1G 6S8. To facilitate the change of address, enclose an address label bearing your name and address from a recent mailing or state your subscription account number.

A8 GENERAL

PROCUREMENT

CIVIL

Individual purchases

Individual copies of the Canada Flight Supplement can be obtained from the network of distributors and suppliers or directly from NAV CANADA. The distributors are listed on NAV CANADA's Aeronautical Publications, Sales and Distribution Unit Web site at www.navcanada.ca and in the Canada Flight Supplement, Section C, Aeronautical Chart Distributors. You can also call Aeronautical Publications at 1-866-731-PUBS (7827) for the distributor nearest you.

Subscription

Subscription to the Canada Flight Supplement is available through:

NAV CANADA
Aeronautical Publications
Sales & Distribution Unit
P.O. Box 9840
Station T
Ottawa ON Canada K1G 6S8
Tel (toll free): 1-866-731-PUBS (7827)
Fax (toll free): 1-866-740-9992
Fax (local): 613-563-4049
E-mail: aeropubs@navcanada.ca
www.navcanada.ca (see Aeronautical Products)

Price: \$99.00 for seven issues plus shipping and handling plus applicable taxes. Visa, American Express and MasterCard are accepted and all sales are final. Please allow 10 days for delivery of your initial issue. If your subscription does not arrive 3 days prior to the effective date, please call NAV CANADA.

MILITARY: The applicable CFAO 36-17 was cancelled in 1998 with a replacement DAOD still pending. In the interim, any questions regarding entitlement or demands for specific FLIPs can be addressed to MCE/GI&S Sqn/ASO at: aso@forces.gc.ca Tel: 613-248-4129/4130/4117.

US MILITARY: See chapter 11 of DOD FLIP General Planning (G.P.)

ABBREVIATIONS AND ACRONYMS (Cont'd)

Flt Pln	- Flight Plan
FM	- Frequency Modulation
FOD	- Foreign Object Damage
freq	- frequency
fr	- from
Fri	- Friday
FSS	- Flight Service Station
FSII	- Fuel System Icing Inhibitor
G	- Grid
gal	- gallon
GCA	- Ground Controlled Approach
GCI	- Ground Control Intercept
Gen	- General
gnd	- ground
GND ADV	- Ground advisory service
gnd con	- ground control
GNSS	- Global Navigation Satellite System
Govt	- Government
GP	- Glide Path
GPI	- Ground Point of Interception
GRVL	- gravel
gr wt	- gross weight
GS	- Glide Slope
GTOW	- Gross Take Off Weight
GV	- Gravitation
H	- Hour
H24	- continuous operation
HAA	- Height Above Aerodrome
hdlg	- handling
HAT	- Height Above TDZE
hdg	- heading
Heli	- Heliport, helicopter
HF	- High Frequency
hgt	- height
hg	- hangar
Hg	- Inches of Mercury
hi	- high
HIAL	- High Intensity Approach Lighting
HIRL	- High Intensity Runway Lights
HLA	- High Level Airspace
hol(s)	- holiday(s)
Hosp	- Hospital
HQ	- Headquarters
HR	- High Level Air Route
hr	- hour
hvy	- heavy
Hwy	- Highway
IAIP	- Integrated Aeronautical Information Package
ICAO	- International Civil Aviation Organization
ID	- Idaho, USA

ident	- identification
IFF	- Identification Friend or Foe
IFR	- Instrument Flight Rules
IFSS	- International Flight Service Station
ILS	- Instrument Landing System
IMC/imc	- Instrument Meteorological Conditions
inbd	- inbound
Inc	- Incorporated
INF	- Inland Navigational Fix
info	- information
inop	- inoperative
INS	- Inertial Navigation System
inst	- instrument
intl	- international
ints	- intensity
intsv	- intensive
intxn	- intersection
IRU	- Inertial Reference Unit
ISA	- International Standard Atmosphere
J	- High Level Airway
Jan	- January
JASU	- Jet Acft Starting Unit
JB	- Jet Barrier
JMC	- Joint Meteorological Centre
Jul	- July
Jun	- June
kHz	- Kilohertz
kph	- kilometres per hour
kt	- knots
kW	- Kilowatt
lat	- latitude
lb(s)	- pound(s)
lcl	- local
lctd	- located
lczr	- localizer
LDA	- Landing Distance Available
ldg	- landing
LF	- low frequency
lgt	- light or lighting
lgtd	- lighted
LOC	- Localizer for Non-Precision Approach Procedures
loc	- located, location
long	- longitude
ltd	- limited
lvl	- level
LVOP	- Low Visibility Operations Plan
LWIS	- Limited Weather Information System
m	- metres

unsched	- unscheduled		
u/s	- unserviceable		
USA	- United States of America		
USAF	- United States Air Force		
USB	- Upper Side Band		
USN	- United States Navy		
UTC	- Coordinated Universal Time		
VAGGS	- Visual Alignment Guidance System (a system of azimuth guidance for approach)		
var	- variation		

ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM

NOTE: When quoting another publication in the text of a NOTAM, quoted text may contain abbreviations and acronyms extracted from the publication which may differ from the list below.

ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM		ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM (Cont'd)	
ABN	- Aerodrome beacon	BFR	- Before
ABV	- Above	BLDG	- Building
ACC	- Area Control Centre or area control	BLW	- Below
ACFT	- Aircraft	BRKG	- Braking
ACT	- Active or activated or activity	BTN	- Between
AD	- Aerodrome	C	- Centre (preceded by runway designation number to identify a parallel runway)
ADIZ	- Air defence identification zone	C	- Degrees Celsius (Centigrade)
ADJ	- Adjacent	CAT	- Category
ADS-B	- Automatic dependent surveillance - broadcast	CH	- Channel
ADS-C	- Automatic Dependent Surveillance - Contract	CHEM	- Chemical solution or ice control chemical
ADZ	- Advise	CL	- Centreline
AFT	- After (time or place)	CLR	- Clear(s) or cleared to or clearance
AGL	- Above ground level	CLRD	- Cleared (Runway cleared - as used in SNOWIZ)
AIC	- Aeronautical Information Circular	CLSD	- Close or closed or closing
AIP	- Aeronautical Information Publication	CNL	- Cancelled
ALS	- Approach lighting system	COM	- Communications
ALT	- Altitude	COND	- Condition
AMDT	- Amendment (AIP Amendment)	CONST	- Construction or constructed
AMSL	- Above Mean Sea Level	CPDLC	- Controller-pilot data link communications
AP	- Airport	CRFI	- Canadian runway friction index
APAPI	- Abbreviated precision approach path indicator	CTA	- Control area
APCH	- Approach	CTC	- Contact
APN	- Apron	CTL	- Control
APR	- April	CUST	- Customs
APRX	- Approximate or approximately	CYA	- Canadian Class F airspace, advisory area
ARR	- Arrive or arrival	CYD	- Canadian Class F airspace, danger area
ASDA	- Accelerate stop distance available	CYR	- Canadian Class F airspace, restricted area
ATC	- Air traffic control (in general)	DA	- Decision altitude
ATFM	- Air traffic flow management	DEC	- December
ATIS	- Automatic terminal information service	DEG	- Degrees
ATS	- Air traffic services	DEP	- Depart or departure
AUG	- August	DEST	- Destination
AUTH	- Authorized or authorization	DH	- Decision height
AVBL	- Available or availability	DIST	- Distance
AVGAS	- Aviation gasoline	DLA	- Delay or delayed
AWY	- Airway	DME	- Distance measuring equipment
AZM	- Azimuth	DOM	- Domestic
BCN	- Beacon (aeronautical ground light)	DRG	- During
BCST	- Broadcast	DTHR	- Displaced runway threshold

ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM (Cont'd)		ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM (Cont'd)	
E	- East or eastern longitude	HELI	- Heliport (following heliport name in NOTAM text for heliport with an alpha-numeric location indicator)
EMERG	- Emergency	HGT	- Height or height above
ENE	- East-north-east	HOL	- Holiday
ENR	- En route	HR	- Hours
EQPT	- Equipment	HYDRO	- Water aerodrome (following aerodrome name in French NOTAM text for water aerodrome with an alpha-numeric location indicator)
ESE	- East-south-east	IAF	- Initial approach fix
EST	- Estimated (following date-time group)	ID	- identify or identifier
ETA	- Estimated time of arrival or estimating arrival	IDENT	- identification
ETD	- Estimated time of departure or estimating departure	IFR	- Instrument flight rules
EXC	- Except	ILS	- Instrument landing system
EXER	- Exercises or exercising or to exercise	IMC	- Instrument meteorological condition
EXP	- Expect or expected or expecting	INFO	- Information
FAC	- Facilities	INS	- Inch or inches (dimensional unit)
FAF	- Final approach fix	INSTR	- Instrument
FATO	- Final approach and take off area	INT	- Intersection
FAX	- Facsimile transmission	INTL	- International
FCST	- Forecast	INTST	- Intensity
FEB	- February	JAN	- January
FIC	- Flight Information Centre	JUL	- July
FIR	- Flight information region	JUN	- June
FL	- Flight level	KG	- Kilograms
FLR	- Flares	KT	- Knots
FLT	- Flight	L	- Left (preceded by runway designation number when identifying a parallel runway)
FLW	- Follow(s) or following	LDA	- Landing distance available
FM	- From	LDG	- Landing
FMS	- Flight management system	LGT	- Light(s) or lighting
FPM	- Feet per minute	LGTD	- Lighted
FREQ	- Frequency	LNAV	- Lateral Navigation
FRI	- Friday	LOC	- Localizer
FSS	- Flight Service Station	LPV	- Localizer Performance with Vertical guidance
FT	- Foot or feet (dimensional unit)	LTD	- Limited
GLD	- Glider	LVL	- Level
GND	- Ground	MAG	- Magnetic
GNSS	- Global navigation satellite system	MAINT	- Maintenance
GP	- Glide path	MAR	- March
GPS	- Global positioning system	MAX	- Maximum
GRVL	- Gravel	MDA	- Minimum descent altitude
H24	- Continuous day and night service	MEA	- Minimum Enroute Altitude
HAPI	- Helicopter approach path indicator	MEDEVAC	- Medical Evacuation
HBN	- Hazard beacon		
HDG	- Heading		
HEL	- Helicopter		

**ABBREVIATIONS AND ACRONYMS
USED IN CANADIAN NOTAM (Cont'd)**

MEHT	- Minimum Eye Height over Threshold (for visual approach slope indicator systems)
MET	- Meteorological or meteorology
METAR	- Aerodrome routine meteorological report
MIL	- Military
MIN	- Minutes
MNPS	- Minimum Navigation Performance Specifications
MOC	- Minimum obstacle clearance (required)
MOCA	- Minimum obstacle clearance altitude
MON	- Monday
MSA	- Minimum sector altitude
MSG	- Message
N	- North or northern latitude
NAT	- North Atlantic
NAV	- Navigation
NAVAID	- Navigation aid
NDB	- Non-directional radio beacon
NE	- North-east
NGT	- Night
NM	- Nautical miles
NNE	- North-north-east
NNW	- North-north-west
NOV	- November
NPA	- Non-precision approach
NW	- North-west
OBS	- Observe(d) or observation
OBST	- Obstacle or obstruction
OCA	- Oceanic control area
OCT	- October
OPN	- Open or opening or opened
OPR	- Operator or operate or operative or operating or operational
OPS	- Operations
PAPI	- Precision approach path indicator
PAR	- Precision approach radar
PCT	- Percent
PERM	- Permanent
PN	- Prior notice required
PPR	- Prior permission required
PRKG	- Parking
PROC	- Procedure
PSR	- Primary surveillance radar
PWR	- Power
QUAD	- Quadrant

**ABBREVIATIONS AND ACRONYMS
USED IN CANADIAN NOTAM (Cont'd)**

R	- Right (preceded by runway designation number when identifying a parallel runway)
RAG	- Runway arresting gear
RAIM	- Receiver autonomous integrity monitoring
RCL	- Runway centre line
RCLL	- Runway centre line light(s)
RDL	- Radial
RDO	- Radio
REC	- Receive or receiver
REDL	- Runway edge light(s)
REF	- Reference to... or refer to
RENL	- Runway end light(s)
RMK	- Remark
RNAV	- Area Navigation
RNP	- Required navigation performance
RSC	- Runway surface condition
RSR	- Enroute Surveillance Radar
RTE	- Route
RTHL	- Runway threshold light(s)
RTZL	- Runway touchdown zone light(s)
RVR	- Runway visual range
RVSM	- Reduced vertical separation minimum (1000 ft between FL290 and FL410)
RWY	- Runway
S	- South or southern latitude
SAR	- Search and rescue
SAT	- Saturday
SDBY	- Stand by
SE	- South-east
SEP	- September
SFC	- Surface
SID	- Standard instrument departure
SKED	- Schedule or scheduled
SR	- Sunrise
SS	- Sunset
SSE	- South-south-east
SSR	- Secondary Surveillance Radar
SSW	- South-south-west
STAR	- Standard instrument arrival
SUN	- Sunday
SUP	- Supplement (AIP Supplement)
SVC	- Service message or service
SVCBL	- Serviceable
SW	- South-west
TACAN	- Tactical air navigation aid
TAF	- Aerodrome forecast

A18 GENERAL

ABBREVIATIONS AND ACRONYMS USED IN CANADIAN NOTAM (Cont'd)	
TAR	- Terminal Area Surveillance Radar
TCH	- Threshold crossing height
TDZ	- Touchdown zone
TEL	- Telephone
TEMPO	- Temporary or temporarily
TFC	- Traffic
THR	- Threshold
THRU	- Through
THU	- Thursday
TKOF	- Take-off
TLOF	- Touchdown and lift-off area
TODA	- Take-off distance available
TORA	- Take-off run available
TRANS	- Transmits or transmitter
TUE	- Tuesday
TWR	- Aerodrome Control Tower or aerodrome control
TWY	- Taxiway
UDF	- Ultra high frequency direction-finding station
UNL	- Unlimited
UNREL	- Unreliable
U/S	- Unserviceable
VAR	- Magnetic variation
VASIS	- Visual approach slope indicator system
VCY	- Vicinity
VDF	- Very high frequency direction-finding station
VFR	- Visual flight rules
VIS	- Visibility
VMC	- Visual meteorological conditions
VNAV	- Vertical Navigation
VOR	- Very high frequency omnidirectional radio range
VORTAC	- VOR and TACAN combination
W	- West or western longitude
WAAS	- Wide area augmentation system
WATER	- Water aerodrome (following aerodrome name in NOTAM text for water aerodrome with an alpha-numeric location indicator)
WDI	- Wind direction indicator
WED	- Wednesday
WIP	- Work in Progress
WNW	- West-north-west
WSW	- West-south-west
WX	- Weather

LIST OF ABANDONED AERODROMES/HELIPORTS

Abandoned aerodromes are listed until such a time as all reference to the aerodrome has been removed from the VFR charts. If the aerodrome was a heliport, the abbreviation (Heli) follows the aerodrome name.

A40 GENERAL

LIST OF ABANDONED AERODROMES/HELIPORTS (Cont'd)

In some instances a land aerodrome, although abandoned, remains highly recognizable from the air and, as such, becomes an excellent land mark. Under these circumstances, abandoned aerodromes of this nature can remain on the aeronautical charts for some time and, therefore, they continue to appear in the abandoned aerodrome list. Such aerodromes are shown on VFR charts as "abandoned".

Land aerodromes which are in operation and are highly recognizable from the air for a significant part of the year, but for which no information is able to be published in the Aerodrome/Facility Directory, do not appear in the abandoned aerodrome list. Such aerodromes are, however, shown on VFR charts as "status unknown".

FUEL AND OIL WEIGHTS

Fuel and lubricating oil product specifications indicate a density range for each product. The density values shown below are based on maximum density limit for each product. The actual fuel weight for specific conditions can and should be obtained from the dealer supplying the fuel. Consult the certified batch analysis (CBA).

LBS PER LITRE/ IMP GAL/U.S. GAL

Fuel	Temp	- 40°C	- 20°C	0°C	15°C	30°C
Aviation Kerosene CAN/CGSB-3.23 (JET A, JET A-1)		1.93 8.80 7.32	1.90 8.65 7.19	1.87 8.50 7.09	1.85 8.39 7.00	1.83 8.27 6.91
Aviation Wide Cut Fuel CAN/CGSB-3.22 (JET B)		1.85 8.38 6.99	1.82 8.24 6.88	1.79 8.11 6.78	1.77 8.01 6.68	1.74 7.92 6.60
Aviation Gasoline (AvGAS) CAN/CGSB-3.25 Grades 80, 100LL		1.69 7.68 6.41	1.65 7.50 6.26	1.62 7.33 6.12	1.59 7.20 6.01	1.56 7.07 5.90

Lubricating oil	Temp	- 10°C	0°C	10°C	20°C	30°C
Piston Engine 65 Grade		1.98 8.98 7.46	1.97 8.92 7.46	1.95 8.85 7.38	1.94 8.78 7.33	1.92 8.71 7.28
120 Grade		2.01 9.10 + 7.59	1.99 9.03 7.54	1.97 8.96 7.46	1.96 8.88 7.41	1.94 8.82 7.35

Turbine engine lubricating oil densities at 15°C

3cS oils 2.09 lbs/litre; 9.4 lbs/imp gal; 7.92 lbs/U.S. gal.

5cS oils 2.15 lbs/litre; 10.1 lbs/imp gal; 8.14 lbs/U.S. gal.

A50 GENERAL

TIME CHECKS – HF FREQUENCIES

CANADIAN TIME SIGNALS – Station CHU, Ottawa, Ontario, operates continuously on the following frequencies: 3330 kHz, 7850 kHz and 14670 kHz. The bilingual voice announcement which is heard each minute takes the form: "CHU CANADA – COORDINATED UNIVERSAL TIME-TEMPS UNIVERSEL COORDONNÉ – HOURS – MINUTES – HEURES – MINUTES" (English on even minutes, French on odd) and on the hour: "CHU CANADA – COORDINATED UNIVERSAL TIME - TEMPS UNIVERSEL COORDONNÉ – HOURS EXACTLY – HEURES PRÉCISES".

AMERICAN TIME SIGNALS – WWV and WWVH continuously broadcast nominal frequencies and time consistent with the internationally agreed upon time scale, Coordinated Universal Time (UTC), on the following frequencies: WWV - 2.5, 5, 10, 15 and 20 MHz, WWVH - 2.5, 5, 10 and 15 MHz. The voice announcement which is heard each minute takes the form: "At the tone - fourteen hours, thirty five minutes Coordinated Universal Time".

GLOSSARY FOR VFR CHARTS (Cont'd)

FRENCH	ENGLISH
Lac	Lake
Lagune	Lagoon
Lagune pour égouts	Sewage lagoon
Ligne de haute tension	Power Transmission Line
Ligne de partage des eaux (Position approximative)	Crest of watershed (Position approximate)
Limite des courbes intermédiaires de 200 pieds	Limits of 200 foot intermediate contours
Marais	Marsh
Marécage	Swamp
Montagne	Mountain
Nord	North
Ouest	West
Papeterie	Paper Mill
Péninsule	Peninsula
Phare	Lighthouse
Piste de courses	Race Track
Pointe	Point
Pont	Bridge
Poste de transformateurs	Transformer Station
Quai	Wharf
Rapides	Rapids
Récif	Reef
Réservoirs de pétrole	Oil tanks
Ruisseau	Creek, Stream
Sable	Sand
Sentier d'hiver	Winter trail
Sommet	Peak
Stade	Stadium
Submergé	Submerged
Sud	South
Terrain de golf	Golf Course
Terrain d'expérience pour véhicules	Vehicle Testing Ground
Toundra	Tundra
Tour	Tower
Tour de garde-feu	Fire Tower
Tour d'observation	Lookout tower
Tracé approximatif	Approximate alignment
Traversée de câble	Cable crossing
Traversier	Ferry
Usine de ciment	Cement plant

GENERAL CHART LEGEND

VFR Chart Symbols (VTA, VNC)

(Only those symbols which may be difficult to interpret are shown)

BOUNDARIES

International	
Provincial, State, Territorial	
National and Provincial Parks	
Wildlife Refuge	
Limit of the Territorial Sea	
Outer Limit of Fishing Zone	

WATER FEATURES

Non-perennial Lake	
	or
Non-perennial stream or coastline	
Waterfalls, Rapids	
Dams	
Locks	
Rocks-bare or awash	
Swamp or marsh	
Land subject to inundation	
String bog	
Rocky reef (ledge)	
Reservoir (depicted in blue)	

LAND FEATURES

Esker	
	or
Moraine	
	or
Dykes	
Sand (deposits, raised beaches)	
Cliff or depression	

GROUND TRANSPORTATION

Divided highway	
Primary road	
Secondary road	
Trail or cut line	
Single track railroad (with station)	
Double track railroad (with yard)	
Railway abandoned	

RELIEF

Critical spot elevation (in feet)	
Spot elevation (in feet)	
Spot elevation (based on unreliable data)	
Mountain pass	

MISCELLANEOUS

Tunnel	
Lookout tower	
Building (unless otherwise labelled)	
Chimney, silo, water tank etc. (label)	
Wells other than water (label)	
Mine	
Racetrack	
Pipeline (underground labelled)	
Power transmission line	
	or
Aerial cableway, ski lift, conveyor belt or similar feature	
EVEN Cruising altitude indicated by pointed end of box.	
CAUTION BLASTING AREA Do not overfly at less than 3000' AGL.	

A54 GENERAL

**AERODROME SKETCH AND VFR TERMINAL PROCEDURES CHART (VTPC)
LEGEND**

All distances in nautical miles. Runway dimensions in feet. Elevations in feet above sea level. Bearings are magnetic except when labelled G for Grid or T for True. ALL AERODROME SKETCHES ARE ORIENTED ON TRUE NORTH. (If symbols not found, consult VFR chart symbols). Text or symbols will be depicted as white on black where they coincide with buildings or other areas depicted with solid black

AERODROME SURFACES

Turnaround bay	
Hard surface runway	
Under construction, closed or abandoned surface	
Sand, gravel, turf, etc., runway	
Ski, ultra-light, glider strip (activity labelled)	
Displaced runway threshold	
	or
Taxiway, apron or holding bay	
Taxiway designator	

LIGHTS

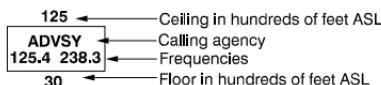

Aerodrome beacon (rotating or strobe)	
Hazard beacon	
Obstruction light	
Obstructions (heights ASL unless otherwise noted)	
Landing direction indicator	
Wind direction indicator	
Lighting annotations: F-fixed, Fl-flashing, Occ-occulting, R-red, G-green, Bl-blue	
Lights are white unless otherwise annotated	

APPROACH LIGHTING

Refer to Section A Lighting

VFR checkpoint prior to CZ entry, within a CZ, or prior to entry of special use airspace.	

NOTE: When cleared to orbit the aircraft should remain within 2NM of the Call-up/Checkpoint in the direction of the arrow. It is recommended that all turns be made to the left.

Heliport (Where FATO & TLOF are embedded or coincidental)	
Hospital heliport (Where FATO & TLOF are embedded or coincidental)	
FATO (Where TLOF is not coincidental)	
Heliport parking pad	
Soaring	
Hang gliding	
Ultra-light aircraft operations	
Training	
Parachuting	
Land Aerodrome	
Water Aerodrome	
Aerodrome Status Unknown	
Abandoned Aerodrome	

VFR TERMINAL PROCEDURES CHART (VTPC)

The purpose of the VTPC is to give an overall perspective of Control Zones or any area around aerodromes as specified by the OCC. The VTPC will be published where important information cannot be adequately described by the sketch or text. It is not for the purpose of precise navigation, therefore, the applicable VFR aeronautical chart should be used for air navigation. The VTPC can be interpreted using the appropriate symbology legend in this section. For purposes of clarity, only the highest obstacle within each quadrant of the applicable area is shown on the VTPC.

AERODROME SKETCH

The aerodrome sketch, when provided, depicts the aerodrome and its immediate environs as seen from the air and should be used in conjunction with the text. It is intended as a guide for pilots in VFR conditions.

Symbology used on sketches can be interpreted by using the chart legends found in this section. Trees, power lines, obstacles, etc., shown in the sketch in the vicinity of runways should be taken into consideration when assessing an aerodrome. Known obstacles 300 feet AGL or higher, not within the shadow of an adjacent higher obstacle, as well as those lower than 300 feet AGL that are considered significant to VFR flight conditions are shown on the sketch. A significant obstacle is any man-made fixed object which has vertical significance in relation to adjacent surrounding features and which is considered a potential hazard to the safe passage of aircraft. The Obstacle Clearance Circle (OCC) reflects the highest known obstacle and is fully explained in this section. It should be noted that the aerodrome sketch depicts a smaller area than does the OCC. When an aerodrome is preceded by a VFR Terminal Procedures Chart (VTPC), topography will not be depicted on the sketch.

Aerodromes which are certified (see General Section - **OPERATOR**) meet obstacle clearance criteria in the immediate approach and take-off areas of a runway. Registered aerodromes have not been assessed and should be viewed accordingly.

OBSTACLE CLEARANCE CIRCLE (OCC)

The obstacle clearance circle is a guide for pilots operating VFR within close proximity to aerodromes and should not be construed as providing minimum descent altitudes.

The single altitude associated with OCC, determined by adding 1000' to the highest obstruction (ASL) located within the same geographic area that the circle describes and rounded up to the next 100 foot increment, is shown. An obstacle may be a man-made structure or a topographic height feature.

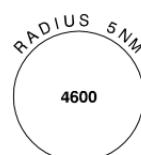

The Control Zone radius is indicated on the upper outer circumference of the circle along with the class of airspace (see Planning Section) that the Control Zone has been designated. The altitude ASL that the zone extends up to will also be shown. Should the zone depart from the standard cylindrical shape, the note "shape irregular" shall be indicated on the lower outer circumference.

The centre of the circle describes the centre of the aerodrome.

The obstacle clearance circle is not applicable to heliports.

ALL HEIGHTS ASL

A56 GENERAL

AERODROMES AND FACILITIES LEGEND - ANNOTATIONS & CODES**CANADIAN AVIATION REGULATIONS (CAR)**

With the promulgation of the CAR, some of the information in SECTIONS B, C, E and F of the Canada Flight Supplement has been incorporated by reference. Therefore, whenever there is a reference in the CAR to information that is "specified by the Minister in the Canada Flight Supplement", that information will form part of the regulation and will have the same effect in law. The following information in SECTION B has been so specified by the Minister:

RUNWAY AND/OR HELI DATA (RWY DATA, HELI DATA):

Operating Restrictions that are specified by the Minister (CAR 602.96) in order to comply with the Airport Certificate issued for the aerodrome/heliport will be indicated, e.g.,

HELI DATA	Parking Pad 4: Ngt use - Rstd to prkg only (CAR 602.96)
COMMUNICATIONS (COMM):	
The designation of an MF Area is indicated by the MF entry, e.g.,	
COMM MF	radio 118.7 04-12Z‡ 5NM 3100 ASL (CAR 602.98)
Within MF Areas, MF Reporting Requirements (CAR 602.98) are mandatory.	
PROCEDURES (PRO):	
Mandatory right hand circuit procedures (CAR 602.96) are indicated, e.g.,	
PRO	Rgt hand circuits rwys 22, 28 & 34 (CAR 602.96)
Operating Restrictions that are specified by the Minister (CAR 602.96) in order to comply with the Airport Certificate issued for the aerodrome/heliport will be indicated, e.g.,	
PRO HELI	Rstd to arr/dep 250° fr heliport only (CAR 602.96)
Mandatory Noise Operating Criteria and/or Noise Restricted Runway (CAR 602.105 or 602.106) are indicated by the NOISE entry, e.g.,	
PRO NOISE	Noise Operating Criteria (CAR 602.105) Noise Restricted Runway (CAR 602.106)

AERODROMES AND FACILITIES LEGEND - ANNOTATIONS & CODES (Cont'd)

LOCATION

The name of community aerodrome serves when geographic location is not reflected in the aerodrome name, or the name of Canadian Forces aerodrome. Name of aerodrome when different from community name. Province if within Canada. State if within U.S.A., Country if outside U.S.A. or Canada.

MONTRÉAL / ST-HUBERT QC

CYHU

If the aerodrome is for helicopter use only, the word "Heli" will appear in parenthesis following the aerodrome name.

Location indicator

Province/Territory	Two Letter Code
Newfoundland & Labrador	NL
New Brunswick	NB
Nova Scotia	NS
Prince Edward Island	PE
Quebec	QC
Ontario	ON
Manitoba	MB
Saskatchewan	SK
Alberta	AB
British Columbia	BC
Yukon Territory	YT
Northwest Territories	NT
Nunavut	NU

REFERENCE (REF)

Aerodrome Geometric Centre Coordinates	Location from community	MAG VAR 2003 unless otherwise indicated	Aeronautical charts on which the aerodrome and/or its Nav Aid are or will be depicted. NOTE: The "Air" in the AIR5000 series visual navigation charts is abbreviated to "A" e.g. AIR5001 will be shown as A5001.
REF	N45 28 05 W73 44 30 GV10°W UTC-5(4) LO1 LO9 T1 CAP RCAP OC	2.25SW 25°E (2012) Elev 00' A5003	Obstacle charts when available, Aerodrome Obstacle Charts ICAO Type A provide the data necessary to enable an operator to comply with the operating limitations of ICAO Annex 6 Chapter 5.
Gravitation		A/D Elevation (where relief data is unreliable, the term "aprx" will be added). Aerodrome elevation is the highest point on the usable landing surface, expressed in feet ASL. (00) elevation represents sea level.	
Time Zone Factor			
Location has an IFR approach published in the Canada Air Pilot			
Location has a Restricted Instrument Approach (RIP) published in the Restricted Canada Air Pilot (RCAP)			

A58 GENERAL**TIME ZONE FACTOR**

Time zone factors are shown for each aerodrome under the **REF** sub-heading. The Coordinated Universal Time (UTC) zone factor will be given, expressed as a plus or minus value, followed by the Daylight Saving Time value in parenthesis, if applicable, e.g., UTC-6 or UTC-5(4).

Certain portions of Canada operate on "Standard Time" between 0200 hrs local time on the first Sunday in November to 0200 hrs local time on the second Sunday in March, and on "Daylight Saving Time" between 0200 hrs local time on the second Sunday in March to 0200 hrs local time on the first Sunday in November. There is a one hour difference between the two which is indicated by the additional time zone factor in parenthesis.

Canada is divided into six time zones shown below together with their respective time zone factors:

(a)	Newfoundland	-3 1/2 (2 1/2)	(d)	Central	-6	(5)
(b)	Atlantic	-4 (3)	(e)	Mountain	-7	(6)
(c)	Eastern	-5 (4)	(f)	Pacific	-8	(7)

TIMES OF OPERATION

The Standard Time hours of operation of facilities and services are indicated in UTC, expressed as "Z" time. If applicable, the Daylight Saving Time (DT) hours of operation will be indicated by the symbol "‡" following the UTC hours of operation. The symbol "‡" indicates that during periods of Daylight Saving Time, the operating hours will be one hour earlier than shown, e.g., **ARFF** | 10-04Z‡ means that the DT hours will be 09-03Z.

If for some reason Daylight Saving Time hours of operation were to differ from Standard Time hours of operation, then the actual hours would be listed in parenthesis, e.g., **ARFF** | 10-04Z (DT 08-02Z). When no DT symbol "‡" is listed, or when no DT hours are quoted in parenthesis, it indicates that the facilities or services operate year round on Standard Time only.

To determine the hours of operation of facilities and services in local time subtract the appropriate time zone factor from the UTC times shown.

Example:

TORONTO / OSHAWA EXECUTIVE AIRPORT ON UTC-5 (4)

COMM	TWR	120.1 (V) 1130-0330Z‡
-------------	------------	-----------------------

During Standard Time period: 1130-0330Z -5 = 0630-2230 local time.

During Daylight Saving Time period, "‡" means (DT 1030-0230Z),

i.e., one hour earlier than shown: 1030-0230Z -4 = 0630-2230 local time.

OPERATOR (OPR)

Aerodrome operator *lodger unit*

OPR	TC (DND) 123-456-7890	Cert	Ldg fees	NVIS OPS AUTH	PPR
------------	-----------------------	------	----------	---------------	-----

AERODROME STATUS

Certified (Cert)

An aerodrome for which an airport or heliport certificate is issued, requiring the operator to maintain and operate the site in accordance with applicable Transport Canada standards. Regular inspections are conducted by Transport Canada to confirm compliance. Certified heliports that have met additional global exemption conditions included in their certificate may be published as NVIS OPS AUTH and may be utilized by NVIS authorized helicopters operators.

Registered (Reg)

An aerodrome listed in the Supplement which is not certified as an airport. Registered aerodromes are not subject to an ongoing inspection program. Pilots intending to use these aerodromes should obtain current information from the owner/operator.

Military (Mil)

An aerodrome that is owned and operated by DND and is not certified or inspected by Transport Canada. All military aerodromes require prior permission (PPR) for civilian aircraft. The utilization of any DND aerodrome/heliport, including those listed as abandoned, as well as, DND facilities for the purpose of storing petroleum products (POL), is strictly prohibited without written approval of DND.

AERODROME STATUS (Cont'd)

Request for utilization of any DND aerodrome/heliport, or, storing POL on DND facilities is to be addressed to:

National Defence Headquarters

Directorate Aerospace Equipment Program Management

Radar and Communication System

101 Colonel By Drive

Ottawa ON

K1A 0K2

NOTES:

Prior Permission Required (PPR)

Where the acronym "PPR" is shown, the aerodrome owner's or operator's permission is required prior to use, except in cases of emergency.

Prior Notice Required (PN)

Where the acronym "PN" is shown, the aerodrome owner or operator is to be notified prior to use in order that current information on the aerodrome may be provided.

Landing Fees

Where "Ldg fees" is listed, the aerodrome operator charges a fee to all users for using the aerodrome. The exact fee can be established by contacting the operator.

PUBLIC FACILITIES (PF)

PF	A-1,2,3,4 Avbl 12-23Z B-5
-----------	---------------------------

The following codes indicate the availability of public facilities, they may be used singly or in groups, however, the numerals shall always follow the letters.

- A These facilities are available in the terminal building (when taxi is shown after this letter it indicates a direct line is available in the terminal building or a taxi stand exists).
- B These facilities are on the aerodrome.
- C These facilities exist within 5 nm of aerodrome.
- D These facilities exist within 30nm of aerodrome.
- 1 Telephone.
- 2 Food.
- 3 Taxi.
- 4 Medical facilities (minimum available is that provided by a Registered nurse).
- 5 Accommodation (rental).
- 6 Car rental.
- 7 Public Wi-Fi.
- 8 Public Internet Access.

CUSTOMS (CUST)

CUST	AOE/24 888-226-7277 excess of 15 pax PN 14-21Z Mon-Fri
-------------	--

CUSTOMS DESIGNATORS

AOE refers to Airport of Entry, and designates all aerodromes where customs and immigration services are available from the Canada Border Services Agency (CBSA).

Aerodromes with capacity limitations are indicated by a number preceded by a forward slash, e.g., AOE/44. Where an aerodrome is indicated to be limited to a capacity of 15, it refers to an authorized CBSA Airport of Entry and exit for general aviation air traffic only, e.g., privately operated or small charter aircraft carrying no more than 15 passengers and crew and their baggage.

A60 GENERAL

AOE/CAN Airport of entry designated for CANPASS private and corporate permit holders only that are from Canada or the USA.

Some airport authorities have entered into cost recovery agreements with the CBSA in order to provide service in certain circumstances, including service during the hours posted in this directory. Please consult airport authorities for more information about how cost recovery may apply to your particular situation.

CBSA (CUSTOMS AND IMMIGRATION) PROCEDURES

(a) Pilots must land at a CBSA authorized Airport of Entry (AOE) and a flight plan must be filed for all trans-border flights with NAV CANADA (CAR 602.73).

(b) Aerodromes which are designated as an AOE with CBSA services available are indicated in the Aerodrome/Facility Directory. "ADCLUS" notifications on flight plans will no longer be accepted and pilots of general aviation aircraft are required to make their own arrangements for CBSA clearance by calling 1-888-226-7277 at least 2 hours but not more than 48 hours before flying into Canada. See AIP GEN 1.2.

Pilots are also cautioned that for flight arrivals outside of the established hours, CBSA service may not always be available and, if service is made available, call-out charges may be levied.

(c) **Telephone Reporting Centre program:** Travellers on a Canadian or U.S. registered private, company-owned, or small non-scheduled charter aircraft carrying no more than 15 passengers, arriving directly from the United States, may use a telephone reporting system to receive permission from a border services officer to enter Canada. The pilot must provide advance notification of arrival and information on all passengers and goods onboard to the CBSA at least 2 hours but not more than 48 hours before flying into Canada by calling the Telephone Reporting Centre at 1-888-226-7277. See AIP GEN 1.2.

Pilots are reminded that providing advance notification of arrival in Canada to the CBSA Telephone Reporting Centre does not fulfill their flight planning requirements and that a flight plan must be filed for all trans-border flights with NAV CANADA.

(d) For those flights commencing outside the geographical areas covered under the 1-888-226-7277 number (North America), the following number is available:

Hamilton, ON Tel: 905-679-2073 Fax: 905-308-8740

For more information on telephone reporting please refer to the Coming to Canada by Small Aircraft or Recreational Boat publication available at the following web address:

<http://www.cbsa-asfc.gc.ca/publications/pub/bsf5061-eng.html>

(e) Where, due to weather conditions or other emergency, the aircraft lands at a place which is not designated as a place for CBSA reporting, the pilot shall call 1-888-226-7277 or the nearest office of the Royal Canadian Mounted Police as soon as possible.

(f) **Military:** Flights should enter Canada via an AOE unless previously arranged with the CBSA. "ADCLUS" notification on flight plans will no longer be accepted. Military crews must always make their own arrival and CBSA clearance arrangements with the local CBSA office by telephone, by letter or via HF communication (through a Wing Ops, phone patch, etc.).

Agreements between Wings and local CBSA offices may vary; therefore, contact applicable Wing Ops for local procedures. The telephone number of the nearest local CBSA office may be requested by calling 1-888-226-7277. For those flights commencing outside the geographical areas covered under 1-888-226-7277 number, refer to paragraph. (d), above.

(g) Medical evacuation flights (MEDEVAC) should enter Canada via a staffed AOE or AOE/15 within the hours of operations listed in the CFS. All arrangements for CBSA clearance should be done through the CBSA Telephone Reporting Centre (1-888-226-7277) at least 2 hours prior to landing, or, in cases of medical emergency flights, as soon as the information becomes available.

CBSA (CUSTOMS AND IMMIGRATION) PROCEDURES (Cont'd)

- (h) **U.S. Customs:** U.S. Customs and Border Protection (CBP) requires private aircraft pilots or their designees arriving in the United States from a foreign port or location destined for a U.S. port or location, or departing the United States to a foreign port or location, to transmit electronically to CBP passenger manifest information for each individual traveling on board the aircraft. The CBP requires private aircraft pilots or their designees to provide additional data elements when submitting a notice of arrival and requires private aircraft pilots or their designees to submit a notice of departure. Private aircraft pilots or their designees will be required to submit the notice of arrival and notice of departure information to CBP in the same transmission as the corresponding arrival or departure passenger manifest information via the Electronic Advance Passenger Information System (eAPIS) or an approved alternate system. Data must be received by CBP no later than 60 minutes before an arriving private aircraft departs from a foreign location destined for the United States and no later than 60 minutes before a private aircraft departs a U.S. airport or location for a foreign port or place. ADCUS and CANPASS notification on flight plans departing the U.S. or Canada will no longer be accepted. Private pilots or their designees are required to set up an eAPIS account at least five days prior to their first transborder flight. For additional information consult the CBP web site at www.cbp.gov

The publication "U.S. Customs and Border Protection Guide for private flyers" outlines special arrangements and restrictions applicable to American airports. This publication is available online at the following address www.cbp.gov/xp/cgov/travel/pleasure_boats/private_flyers/

FLIGHT PLANNING (FLT PLN)

DUAT		Sky High Flying Club	

NOTAM:

The term "(bil)" preceding the term "NOTAM FILE" indicates that all services listed below are offered bilingually. When bilingual services are limited, the term "(bil)" will precede the appropriate service.

The term "NOTAM FILE" followed by 4 letters indicates the 4-letter location indicator under which NOTAMJ (Aircraft Movement Surface Condition Reports (AMSCR) NOTAM) may be obtained by query/response using the Aeronautical Fixed Telecommunication Network (AFTN). For more information on how to obtain NOTAM, NOTAM Regions and dissemination categories, consult AIP Canada (ICAO).

FLIGHT INFORMATION CENTRE (FIC):

Flight Information Centres provide pre-flight and flight information services en-route (FISE). The services include the provision of, or consultation on, pilot weather briefings, meteorological information, aeronautical information, aeronautical broadcasts, flight planning and VFR alerting, flight regularity message service, and other associated information services.

For access to services provided by the FICs, the following telephone numbers are available toll-free within Canada only:

1-866-WXBRIEF (1-866-992-7433). Calls to this number are routed to the FIC that serves the area from where the call originates.

1-866-GOMÉTÉO (1-866-466-3836). All calls to this number are routed to Québec FIC. This number is intended for the provision of bilingual services.

A62 GENERAL

FLIGHT INFORMATION CENTRE (FIC): (Cont'd)

Due to limitations of some telecommunication service providers, cellular and satellite telephone calls may not be connected to 1-866-WXBRIEF/GOMÉTÉO. Should this occur, the following list of unique toll free numbers provides direct toll-free access (from within Canada and the continental United States) to the FICs. If callers are unable to reach the FIC using these toll-free numbers, we have also included in this list the long distance toll numbers that will send the caller directly to the same queue as if they called 1-866-WXBRIEF or 1-866-GOMÉTÉO.

Kamloops FIC:	1-866-541-4101 or 250-376-8392
Edmonton FIC:	1-866-541-4102 or 780-890-8386
Winnipeg FIC:	1-866-541-4103 or 204-983-8407
London FIC:	1-866-541-4104 or 519-452-4040
Quebec FIC (bilingual service):	1-866-541-4105 or 418-871-8678

AREA CONTROL CENTRE (ACC):

At specified locations the ACC provides weather information (hourly and special reports only) and NOTAM, and also accepts flight plans. Collect calls will be accepted from locations not having air traffic services communications facilities. At other locations, the ACC accepts the filing of flight plans directly by Fax, and this is indicated by the following note: "flt pln by Fax 123-456-7890".

MILITARY (MIL):

Military flight planning facility; normally restricted to military use only. Canadian NOTAM information is available on the DWAN at <http://met.forces.gc.ca>, and online at <http://www.flightplanning.navcanada.ca>. International NOTAMs are available on the DWAN and online at <http://www.notams.jcs.mil> and <http://www.notams.faa.gov>.

COMMUNITY AERODROME RADIO STATION (CARS):

Ground stations using the call sign "AIRPORT RADIO" are usually operated by Community Aerodrome Radio Stations (CARS). Airport Radio (APRT RDO) service is provided by Observer/Communicators (O/Cs) who are certified to conduct aviation weather observations and radio communications to facilitate aircraft departures and arrivals (O/Cs are authorized to provide an altimeter setting for an instrument approach) at uncontrolled aerodromes (see TC AIM RAC).

The frequencies used by APRT RDO/CARS and the hours of operation (if less than H24) are listed under **COMM**, e.g., **APRT RDO I** 122.1 (V) 13-21Z‡ Mon & Wed-Fri, 16-24Z‡ Tue, exc federal observed hols.

WEATHER (WX):

For civil aviation purposes, NAV CANADA is responsible for the dissemination of weather information, observations and forecasts to meet the needs of a safe and efficient air navigation system.

The pilot briefing service is available by telephone.

Online weather is available from the NAV CANADA web site at:
<http://www.flightplanning.navcanada.ca>.

For military aviation purposes, the Canadian Forces Weather and Oceanographic Service has the same responsibilities. Military weather services are normally restricted to military use only. Military weather services are available on the DWAN at <http://met.forces.gc.ca>. Military air crew briefing services are available through a toll free telephone number at 1-800-WXMETEO (equates to 1-800-996-3836), CSN 432-2613, or regular phone number at (506) 422-2613

Observed weather information, observations and forecasts originating from any non-NAV CANADA or non-military weather service are considered to be provided by a private meteorological service provider.

WEATHER SERVICES - OBSERVATIONS

Surface Weather Observations in METAR format, made by human observers or by an Automated Weather Observation System (AWOS), are taken within 1.6 nautical miles of the aerodrome centre.

The AWOS is a vigilant and precise weather observation system. Sky condition, cloud amount, visibility and precipitation are determined from a sampling of a small volume of air at and above the AWOS. As a result the weather must occur in the sampling area to be 'seen' and reported by the system. It may take 15 minutes or more for the weather to actually cross the sensor before it is

detected and the algorithms can begin processing the data. This factor and the location of the AWOS itself, can on occasion contribute to the reported weather observation differing from the current weather in the vicinity of the aerodrome.

If a meteorological station location indicator differs from an aerodrome/heliport location indicator or the station is more than 1.6 NM from an aerodrome/heliport, and the services provided are used for air navigation purposes, the distance, direction and/or location indicator of the meteorological station will be provided.

WX METAR H24 (CWAA)

WX METAR H24 4.5SW (CWAB)

The following weather reports and services are listed for the applicable sites in the CFS under "FLT PLN" and "WX":

METAR	METAR and SPECI weather observation program taken by a qualified human observer that produces an hourly METAR or SPECI coded report that is disseminated beyond local aerodrome area through approved telecommunication network. METAR hours will be included.
METAR AUTO	METAR and SPECI weather observation program taken by a stand-alone Automated Weather Observation System (AWOS) that produces an hourly METAR or SPECI coded report that is disseminated beyond local aerodrome area through approved telecommunication network. (see *NOTE for NC AWOS enhancements). AWOS systems located outside of the Canadian Lightning Detection Network coverage area do not receive lightning data and therefore are unable to report thunderstorm or lightning data and therefore are unable to report thunderstorm or lightning activity.
LWIS	Limited Weather Information System (LWIS) - Automated weather system which produces an hourly LWIS coded report that is disseminated beyond local aerodrome area through approved telecommunication network. The coded LWIS report only contains wind speed, direction, temperature, dew point and altimeter setting. (See *NOTE for NC LWIS enhancements).
AUTO	An Automated weather system that does not meet requirements to produce METAR, SPECI or LWIS coded reports that is disseminated beyond local aerodrome area through approved telecommunication network. These systems can report a variety of observed weather elements. Contact the Aerodrome Operator (OPR) for further information on the specifics of the system.
ALTIMETER	Altimeter setting report derived from two aircraft altimeters. The private altimeter setting report is a weather service provided in support of an Approach UNICOM (AU). Contact the Aerodrome Operator (OPR) for further information on the specifics of the service.
WIND	Human assessment of wind speed and direction. The private wind speed and direction report is a weather service provided in support of an Approach UNICOM (AU). Contact the Aerodrome (OPR) for further information on the specifics of the service.
WxCam	Indicates that a NAV CANADA Aviation Weather Camera is installed at the site. Still images are transmitted to the NAV CANADA Aviation Weather Web Site at 10-minute intervals.
Webcam	Indicates that one or more cameras not belonging to NAV CANADA have been installed at this location. Contact the Aerodrome Operator (OPR) for further information on the specifics of the camera system.

Stand-alone METAR AUTO and LWIS reports are available during published hours through normal meteorological information systems. At some sites an automated voice broadcast of the latest observation is available via VHF transmitter. In these cases, the VHF frequency is displayed in the **COMM** box (e.g. **COMM AWOS 124.7**, **COMM AUTO 122.025**). In cases where ALTIMETER and/or WIND is broadcast through a UNICOM (AU), the frequency is displayed in the **COMM** box (e.g. **COMM ATF UNICOM (AU) 122.7**).

A64 GENERAL

HOURS OF OPERATION

The hours of coverage for METAR, METAR AUTO, AUTO, LWIS, ALTIMETER and/or WIND are given (e.g. METAR 09-21Z). At sites where coverage is 24 hours, the coverage is listed as H24 (e.g. METAR H24, METAR AUTO H24). At sites where there is a combination of weather programs, the coverage will be listed as METAR xx-xxZ O/T METAR AUTO or LWIS (e.g. METAR 12-20Z O/T LWIS). Sites providing unspecified limited hours of coverage will be listed as ltd hrs (e.g. ALTIMETER ltd hrs). Contact the Aerodrome Operator (OPR) for further information on the specifics of the hours of operation.

*NOTE:

NAV CANADA's Automated weather system network (NC AWOS and NC LWIS) features include:

- **Thunderstorm Reporting** (NC AWOS) at sites within the domain of the Canadian Lightning Detection Network (CLDN). Thunderstorm activity, based on the proximity of the lightning strike(s) to the site, is to be reported as:
 - TS - Thunderstorm (at site), if lightning detected at 6sm or less;
 - VCTS - Thunderstorm in Vicinity, if lightning detected from > 6-10sm; and
 - LTNG DIST (direction) if lightning detected from >10 - 30sm, Lightning Distant with octant compass cardinal direction shall be reported in "Remarks" e.g. LTNG DIST NE, S, SW
 - LTNG DIST ALL QUADS - Lightning Distant All Quadrants will be reported in "Remarks" if lightning is detected in four or more octants.
- **Ice-Resistant Anemometer** (NC AWOS and NC LWIS) - Ice-resistant technology essentially eliminates anemometer performance degradation due to freezing precipitation, freezing fog or snow contamination.
- **Density Altitude reporting capability** (NC AWOS and NC LWIS) - Density altitude at the site is reported in hundreds of feet in the "Remarks" section of the observation if it is above aerodrome elevation.
- **Laser Ceilometer** (NC AWOS) - NC AWOS is capable of reporting cloud bases up to 25,000 ft.
- **Improved "Obstructions to Vision" reporting capability** (NC AWOS) - NC AWOS is capable of reporting Haze (HZ); Mist (BR); Fog (FG); Freezing Fog (FZFG); and Blowing Snow (BLSN).
- **Voice Generator Sub-System** (VGSS) - VHF transmission of weather report to pilots.
- **Runway Visual Range (RVR) reporting** (NC AWOS) at sites where RVR sensors are installed.
- **Remote Maintenance capability** (NC AWOS and LWIS) enables the remote monitoring, resetting, and upgrading of systems.
- **Updated weather algorithms** reduce the number of 'nuisance' SPECI reports (NC AWOS).
- **Digital aviation weather cameras (WxCam)** are installed at many NC AWOS, NC LWIS sites, and at stand-alone locations.

Sites in the Canada Flight Supplement (CFS) where aviation weather cameras are installed will have this service identified by using the term "**WxCam**" under the "**FLT PLN - WX**" section of the listing.

All METAR, SPECI and WxCam images are available on the NAV CANADA Aviation Weather Web Site (AWWS) at www.flightplanning.navcanada.ca.

WEATHER SERVICE - FORECASTS

Aerodrome Forecasts (TAF) are normally issued every 6 hours during periods when observations are being made. They are normally valid for 12 hours; however, the actual TAF validity period is part of the Aerodrome Forecast text.

The hours of coverage for TAF forecasts are given. Not all TAFs are issued at the same time by a Canadian Meteorological Aviation Centre of Environment Canada or Canadian Forces Weather and Oceanographic Service. TAF issue times are therefore given, e.g., TAF 24 hrs, issue times: 00, 06, 12, 18Z.

PILOT TO METRO SERVICE (PMSV):

The Canadian Forces operates a PMSV at selected bases to provide military aircrew direct radio contact with local Meteorological (Met) Sections. Details of this service and the actual frequencies to be used are listed under **COMM**, e.g., **PMSV I** 344.6. Where this service is available, the note "(see COMM)" is added to the WX entry.

CANADIAN FORCES OPERATIONAL WEATHER BRIEFING

Military aircrew requiring an operational weather briefing can contact the Joint Meteorological Centre (JMC) using the toll free number 1-800-WXMETEO (equates to 1-800-996-3836), CSN 432-2613 or regular phone number at (506) 422-2613.

Military air crew can also contact the JMC to arrange for a briefing by DWAN e-mail at "+GAG JMC Remote Brief Req@Joint Met Centre@Gagetown" or internet e-mail at "GAGJMCRemoteBriefReq@forces.gc.ca".

These services are intended for military aircrew who have an operational need for weather information and find themselves without access to other weather services. This service may be interrupted by higher priority operations.

DIRECT USER ACCESS TERMINAL (**DUAT**):

Direct User Access Terminals may have graphic/alphanumeric weather or NOTAM information available and may permit the filing of flight plans. The specific installation sites are listed under **FLT PLN**, e.g.,

DUAT	Sky High Flying Club
-------------	----------------------

SERVICES

The information contained under this sub-heading indicates what is usually available to General Aviation within the confines of the aerodrome or airport. If a service/function or item is not listed then in all probability it does not exist. Absence of information indicates non availability. Information on services at an aerodrome is provided by the company or individual offering that service. Transport Canada is not responsible for such information.

Call out charges

Where "Call out chgs" is listed, the aerodrome operator charges a fee to all users who make use of one or more services at the aerodrome. The exact fee can be established by contacting the operator.

A66 GENERAL

SERVICES	Call out chg may be levied for one or more services.

MG-3	AKI of 91.0	(Grade 3)
MG-4	AKI of 93.0	(Grade 4)
(D)	Fuel available from drum only.	
IP	Into Plane	
AP	Along Plane	
SP	Single Point Refuelling	
HPR	High Pressure Refuelling	
FSII	Fuel System Icing Inhibitor: The term (FSII avbl) shall immediately follow the fuel to which it refers (JA, JA-1 or JB). Indicates FSII available at airport and is either: already in the fuel (premixed); or, can be added on request. When delivery method required, contact fuel supplier at airport.	

NOTES:

- (a) 100LL (Blue) AVGAS, available in all NATO countries and at several locations in Canada. Use at 100/130 (Green) power settings.
- (b) ASTM – American Society for Testing and Materials.
- (c) U.S. Spec., MIL-DTL-83133 applies, CAN/CGSB 3.24 grade F-34, F-44.
- (d) AKI=Anti-Knock Index.
- (e) +100 additive = Thermal Stability Additive. NATO code S-1749

DND CONTRACT FUEL

When purchasing aviation fuel products in Canada, military aircrew shall make maximum use of DND into-plane contracts. Government of Canada credit cards shall only be used where DND into-plane contracts are not available or in any emergency situation.

DND fuel contract is indicated in brackets e.g. (CON I IP F-44). Details of contractor are under **MIL CON**.

CON	Contract	S	Shell
I	Imperial Oil	SP	Single point refuelling
P	Petro Canada	HPR	High pressure refuelling

Note 1: At civilian locations, the following services, although made available by the contractor, are not covered in the DND's Fuel Contract and shall be paid for by alternate means (e.g. credit card, cash) by the user:

Marshalling, chocking and chock removal.

Refuelling of aircraft by qualified personnel.

Placement and removal of ladder or stairs.

Fluids provided for the replenishment of aircraft Fluid Systems.

Replenishment of gaseous oxygen systems.

Cleaners provided for the cleaning of canopy or windscreen.

Positioning and operating of energizer or air start units for starting.

Towing if tow bar available.

Provide or arrange for de-icing of aircraft surfaces.

Provide or arrange for aircraft storage.

Note 2: Marshalling may not be available immediately, but may be provided on a requested basis, as availability of contractor personnel permits. Pilots must use discretion as to whether to manoeuvre their aircraft unassisted or to wait till a marshaller is available.

A68 GENERAL**OIL:****CIVIL OIL LISTINGS**

AIRCRAFT RESCUE AND FIRE-FIGHTING (ARFF)

STATUS (Participating or Designated)	CRITICAL CATEGORY (acft category will be referred to as category)	Availability of higher acft CAT for fire-fighting	Hrs of ops when less than H24
ARFF	DESIGNATED CAT 6 (CAT 7 1 hr PN) 1100-0500Z‡, O/T 519-452-4000 call out chg. Discrete emerg freq 122.675		

NOTES**Participating and Designated airport or aerodrome.**

At a land aerodrome or airport, in order to assist air operators subject to CARs 602.96 (6), the term "DESIGNATED" or "PARTICIPATING" precedes the Critical Category inside the ARFF annotation.

ARFF Critical Category

The operator of an airport or aerodrome providing the aircraft rescue and fire-fighting services publishes a number which corresponds to the critical category for fire-fighting available to respond to an aircraft emergency at the airport or aerodrome. This number is found inside the ARFF annotation.

ARFF Hours of Operation**Airports and aerodromes**

The aerodromes or airports providing ARFF publish in this document the hours during which an aircraft rescue and fire-fighting service is operated under the ARFF annotation. The absence of published hours following an ARFF Critical Category number denotes a 24 hour service.

ARFF Discrete Communication

The capability to communicate on a discrete frequency is normally available at airports that provide Aircraft Rescue and Fire-Fighting (ARFF) services, contact ATS.

ARFF Extinguishing Agent and Vehicle Requirements

The following table identifies the critical category for aircraft rescue and fire-fighting as it relates to the aircraft size, the quantities of water and complementary extinguishing agents, the minimum number of aircraft rescue and fire-fighting vehicles and the total discharge capacity. For ease of interpretation, the table is a combination of the two tables found in CAR 303.

Acft Category	Acft Overall Length	Maximum Fuselage Width	Quantity of water (in litres)	Quantity of Complementary agents (in kilograms)	Minimum Number of ARFF Vehicles	Total Discharge Capacity (in litres per minute)
1	less than 9 m	2 m	230	45	1	230
2	at least 9 m but less than 12 m	2 m	670	90	1	550
3	at least 12 m but less than 18 m	3 m	1200	135	1	900
4	at least 18 m but less than 24 m	4 m	2400	135	1	1800
5	at least 24 m but less than 28 m	4 m	5400	180	1	3000
6	at least 28 m but less than 39 m	5 m	7900	225	2	4000
7	at least 39 m but less than 49 m	5 m	12 100	225	2	5300
8	at least 49 m but less than 61 m	7 m	18 200	450	3	7200
9	at least 61 m but less than 76 m	7 m	24 300	450	3	9000
10	at least 76 m	8 m	32 300	450	3	11 200

Military Airports

When published in this document, the ARFF services provided by the Department of National Defence (DND) are at least equivalent to those provided at civilian airports. DND ARFF Categories include interior fire-fighting and rescue capabilities whereas the Transport Canada ARFF requirements do not.

SUPPORTING FLUIDS, SYSTEMS AND OXYGEN (SUP FL)

ADI	Anti-Detonation Injection Fluid—reciprocating engine
D-Ice	De-icing fluid
A-Ice	Anti-icing fluid
PRESAIR	Air compressors rated 3000 PSI or more
LPOX	Low pressure oxygen servicing
HPOX	High pressure oxygen servicing
LHOX	Low and High pressure oxygen servicing
LOX	Liquid oxygen servicing
OXRB	Oxygen replacement bottles

NOTE: A combination of the above terms is used to indicate complete oxygen servicing available, i.e., LHOX-RB, meaning Low and High pressure oxygen servicing and replacement bottles; and LPOX-RB only, meaning Low pressure oxygen replacement bottles only, etc.

STARTER PROBES

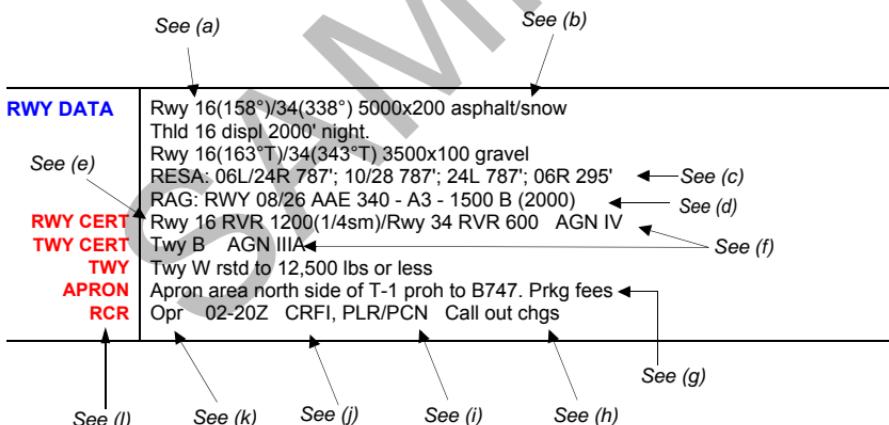

Starter probes for A4 and F8 acft are available at most, but not all USN/USMC jet air stations. Probe availability is indicated on JASU line, e.g.,(A4, F8 probes), (A4 probe). Absence of indicates non-availability.

MILITARY ADVISORY (MIL ADV)**PRIVATE ADVISORY (PVT ADV)****RUNWAY AND/OR HELI DATA (RWY DATA, HELI DATA)**

For land aerodromes, the **RWY DATA** sub-heading will always be shown; the **HELI DATA** sub-heading may also be shown if applicable. For aerodromes which are exclusively heliports, only the sub-heading **HELI DATA** will be shown.

Operating restrictions that are specified by the Minister in order to comply with Airport Certificate issued for the aerodrome/heliport will be indicated by (CAR 602.96).

In Southern and Northern Domestic Airspace runways are identified by two-digit runway number designators followed by "L" "R" or "C" if required. Runways are listed in pairs and by decreasing order of runway length.

- (a) Rwy designation, actual magnetic or true bearing, length & width, type of surface, operational restriction.
- (b) Indicates runway is in operation during winter months for ski equipped aircraft.
- (c) Dimension of the Runway End Safety Area applicable to the specified runway.
- (d) Arrestor cable type.
- (e) An entry of "RVR 1200(1/4sm)" indicates that the runway meets the requirements for runway and taxi operations below RVR 2600(1/2sm) down to and including RVR 1200(1/4sm).
 An entry of "RVR 600" indicates that the runway meets the requirements for runway and taxi operations below RVR 1200(1/4sm) down to and including RVR 600.
- NOTE: For the purpose of aircraft taxiing only, an RVR 600 visibility condition equates to a reported ground visibility of 1/8sm.
- An entry of "Day only" indicates that the specified level of service is only approved for day operations.
- An entry of "Night only" indicates that the specified level of service is only approved for night operations.
- The absence of "Day only" or "Night only" indicates that the level of service is approved for both day and night operations.

If no runway visibility range (RVR) is published for the runway, then the operations are limited to a visibility of 2600(1/2sm) and above.

Where required, special reduced/low visibility restrictions or procedures for pilots will be published in the appropriate aeronautical publication(s). Runways certified for reduced visibility procedures (RVR 2600(½ sm) down to and including RVR 1200(¼ sm) do not necessarily require special pilot procedures and may not have special procedures published.

This information only indicates the level of service the aerodrome provides in regards to runway and taxi operations in reduced or low visibility conditions. In order to operate below RVR 2600(1/2sm) pilots and Air Operators must ensure they meet all other applicable regulatory requirements, including landing minima, take-off minima, published departure and noise abatement procedures.

Military aircraft operations are governed by military flying orders. Civil pilots and civil Aerodrome Operators should therefore be aware that, in reduced/low visibility conditions, military aircraft may be operating below the published level of service when civil aircraft operations may actually be prohibited in such conditions. The preceding applies equally to military as well as civil aerodromes.

An entry of "AGN IV" indicates that the runway is certified as meeting requirements with respect to the obstacle free environment to support the airborne and ground operation of aircraft having wingspans less than 52.12m (171 feet).

See the following table for a breakdown of wingspans into AGN groupings. The determination of the AGN is made with reference to the V_{ref} obtained with the aeroplane at maximum landing weight and configured with the maximum allowable landing flap. It does not include any operational adjustments to V_{ref} due to environmental conditions (steady state wind, gusts or icing, etc.) or aircraft abnormal or emergency configuration (slats or flaps jam, etc.).

Runway Obstacle Free Environment	
Wing Span	Aircraft Group Number
Less than 14.94 m (49')	I (for approach speed CAT C or D use AGN IIIB)
14.94 m up to but not including 24.10 m (79')	II (for approach speed CAT C or D use AGN IIIIB)
24.10 m up to but not including 36.00 m (118')	IIIA (for approach speed CAT C or D use AGN IIIB)
36.00 m up to but not including 52.12 m (171')	IIIB (includes groups I - IIIA with C & D approach speeds)
52.12 m up to but not including 65.23 m (214')	IV
65.23 m up to but not including 79.86 m (262')	V
	VI

Category	A or COPTER	B	C	D	E
Speeds	up to 90 kt	91 to 120 kt	121 to 140 kt	141 to 165 kt	above 165 kt

The AGN will only be published for those taxiways having a lower AGN than of the runway with the highest certification level.

See the following table for Taxiway AGN.

Taxiway Obstacle Free Environment	
Wing Span	Aircraft Group Number
Less than 14.94 m (49')	I
14.94 m up to but not including 24.10 m (79')	II
24.10 m up to but not including 36.00 m (118')	IIIA / IIIB
36.00 m up to but not including 52.12 m (171')	IV
52.12 m up to but not including 65.23 m (214')	V
65.23 m up to but not including 79.86 m (262')	VI

- (f) An Aircraft Group Number is used to communicate the maximum aircraft wingspan and approach speed category for the part of a certified aerodrome (airport) that is assessed.
- (g) Where "Prkg fees" is listed, the aerodrome operator charges a fee to all users who park at the aerodrome. The exact fee can be established by contacting the operator.

A74 GENERAL

- (h) Where "Call out chgs" is listed, the aerodrome operator charges a fee to all users who make use of one or more services at the aerodrome. The exact fee can be established by contacting the operator.
- (i) For civil aerodromes, indicates PLR and/or PCN information is available from the operator. ACN/PCN for military aerodromes; actual PCN values and/or Mil Rwy Bearing Capacity Codes may be listed. Where PLR/PCN (or ACN/PCN) is not indicated, it means that the aerodrome surfaces have not been assessed. If an aircraft weight restriction is desirable in these cases, a statement restricting runways to aircrafts of certain weights may be listed, e.g., Rwy 28 restricted to aircrafts of a GTOW of under 7000 lbs.
- (j) Canadian Runway Friction Index availability (see table).
- (k) Agency and telephone number if different from operator.
- (l) Runway Condition Report. The organization that is capable of providing the condition of the runway.

HELI DATA

At all heliports the safety area is an obstacle free area that is considered non-supporting and no surface type will be indicated.

At elevated or rooftop heliports the FATO may be non-supporting and will be indicated if the condition exists.

Heliport Data will be published based on three possible scenarios:

1. FATO & TLOF (where FATO and TLOF are embedded): FATO dimensions and surface type, TLOF dimensions and surface type. May be followed by Safety Area dimensions.

Example:

HELI DATA	FATO 85' dia CONC TLOF 30' dia CONC Safety Area 144' x 100'
------------------	---

2. FATO/TLOF (where FATO and TLOF are coincidental [same size]): FATO/TLOF dimensions and surface type. May be followed by Safety Area dimensions.

Example:

HELI DATA	FATO/TLOF 60' x 60' ASPH Safety Area 74' x 74'
------------------	---

3. FATO where TLOF is not coincidental: FATO dimensions and surface type. May be followed by Safety Area dimensions.

Example:

HELI DATA	FATO 85' dia CONC Safety Area 144' x 100'
------------------	--

The above dimensions may be followed by:

- Heliport restrictions and maximum helicopter overall length
- Parking Pad dimensions, surface type, and pad restrictions
- Type of elevated heliport where applicable

Example:**HELI DATA**

FATO 85' dia CONC TLOF 30' dia CONC Safety Area 144' x 100'
20,500 lbs Max heli overall length 57'
Parking Pad 1: 30' dia ASPH 11,400 lbs
Parking Pad 2: 40' dia METAL 20,500 lbs
Parking Pad 3: 40' dia GRASS 11,400 lbs

CANADIAN ARRESTING SYSTEMS

The following list identifies current operational arresting systems in use by the Canadian DND.

(a) CABLE

(i) Bi-Directional

BAK-12	Rotary Friction Brake
AAE 44B-3H	Water Twister
*AAE 340-A3-1000	Water Squeezer
*AAE 340-A3-1500	Water Squeezer
BLISS 500S	Rotary Friction Brake

*Systems are identical except for runouts which are 1000' and 1500' respectively.

(ii) Uni-Directional

E-5	Chain Type
-----	------------

(b) BARRIER

(i) Bi-Directional

NIL

(ii) Uni-Directional

MA-1A

Webb barrier between stanchions attached to a chain energy absorber. Designed primarily for main strut engagement but tests reveal successful hook back-up capability.

(c) BARRIER/CABLE

Combination BARRIER/CABLE arresting systems are not available in Canada.

FOREIGN ARRESTING SYSTEMS

Caution: Canadian evaluation of the systems listed below has not been verified. Where a foreign arresting system is shown as having a Canadian equivalent this information is offered as a guide only and does not indicate that either system meets the technical specifications of the other. The comparison is based on best available data at time of publication but is not to be construed as clearance for use. Obtain clearance from tower prior to landing.

A76 GENERAL

(a) CABLE

System Identification	Nearest Canadian Equivalent Energy Capacity
BAK-6	AAE 340-A3-1000
BAK-9	AAE 340-A3-1000
BAK-13	None
E-14	AAE 340-A3-1000
E-28	None
M-2	None
M-21	UNI 700
AAE-44B-2H	AAE 44B-3H
SAF 21.2	None
SAFH 12.3	None
HKB	None
AAE-44B-2C	BAK-12
AAE-44B-2D	None
BLISS 500 S6	BLISS 500 S
BLISS 500 S8	BAK-12
RHAG Mk 1	None
PUAG Mk 21	None
SPRAG	None

BEFAB 21:2	None
AAE 34B-1C	AAE 340-A3-1000
BEFAB 6:3	Unknown
BEFAB 12:3	Unknown
Jet-Stop	AAE 340-A3-1000

(b) BARRIER

System Identification	Nearest Canadian Equivalent Energy Capacity
AAE-44B-2C/A-30 (Net)	None
F-30 ROLBA (Net)	None
F-30 ROLBATWIN (Net)	None
F-40 BLISS S6 (Net)	None
F-40 BLISS S8 (Net)	None
RAF MK5 (Net)	MA1A
RAF MK6	None
RAF MK12	None
RAF MK12A	None
BEFAB 6:3 (Net)	Unknown
BEFAB 12:3 (Net)	MA1A

(c) BARRIER/CABLE

Nil.

- (d) The following devices are used in conjunction with some aircraft arresting system:
- BAK-11 Pop-up engaging device with a mechanical energy absorber (BAK-9, BAK-12) to engage main landing struts.
 - BAK-14 A device that raises a hook cable out of a slot in the runway surface and is remotely positioned for engagement by the tower on request.

AIRCRAFT OPERATING FLIGHT MANUAL

Refer to current aircraft operating/flight manuals for specific engagement weight and speed criteria based on aircraft structural restrictions and arresting system limitations. Up to 15 minutes advance notice may be required for rigging arresting systems for approach end engagement. MA 1A system may not be used for approach end engagements.

LOCATION OF ARRESTING SYSTEMS

Systems which have a bi-directional capability and can be used for emergency approach and engagement are indicated by the letter 'B' which will immediately follow the system type. The value in parenthesis indicates the distance from the end of the runway where the system is located.

Up to 15 minutes advance notice may be required for rigging arresting systems for approach end engagement. MA-1A system may not be used for approach end engagements.

Caution: Taxiing, taking-off or landing over arresting cables may cause damage to certain types of aircraft.

MILITARY RUNWAY WEIGHT BEARING CAPACITY CODES

NOTE: Military aerodromes only.

S	-	Single-wheel landing gear
T	-	Twin-wheel landing gear (C9A, etc.)
ST	-	Single Tandem landing gear (C-130, etc.)
TT	-	Twin Tandem landing gear (B-52, C-135, etc.)
TDT	-	Twin Delta Tandem landing gear (C5)
DDT	-	Double Dual Tandem (E4A, 747)
SWL	-	Single wheel loading
PSI	-	Pounds per square inch
AUW	-	All up weight. Maximum weight bearing capacity irrespective of landing gear configuration.

Runway weight bearing capacity (gross weight of aircraft) is determined by adding "000" to the figure following S, T, ST, TT, TDT, or DDT. Gross weights are given for the principle runway and taxiway system. Unless specifically noted, operations on other paved areas should be cleared on an individual basis. The simplified form expresses the load limit for the most severe aircraft within each undercarriage group and, therefore, may be restrictive for other less severe undercarriages. Decisions to permit repeated operations of a particular aircraft in excess of the stated load limit should be based on a more complete form of runway strength rating such as the PCN system.

A78 GENERAL

THE AIRCRAFT CLASSIFICATION & PAVEMENT CLASSIFICATION NUMBER SYSTEM (ACN/PCN)

1. The ACN/PCN system is the ICAO standard method of reporting pavement strength for pavements with bearing strengths greater than 12,500 lbs (5700 kg).
2. Aircraft Classification Number (ACN) is an indicator of the weight of an aircraft relative to a pavement. ACN values for C.F. aircraft are available in applicable Aircraft Operating Instructions (AOI's). By comparing the ACN to the PCN one can determine if an aircraft of specific mass should operate on a particular section of pavement. Provided the ACN is less than or equal to the PCN of the aircraft, unlimited use is permitted. When the ACN exceeds the PCN, criteria are established for controlling overload operations.
3. Pavement Classification Number (PCN) is established by an engineering assessment expressing the load capacity of a pavement for unrestricted operations. For runways that have been evaluated under the ACN/PCN system, the PCN will be shown as a five part code (i.e. PCN 80 R/B/W/T). Details of the coded format are as follows:
 - (1) The PCN NUMBER - The reported PCN indicates that an aircraft with an ACN equal or less than the reported PCN can operate on the pavement subject to the tire pressure code limitation (para 4).
 - (2) The type of pavement:
R - Rigid
F - Flexible
 - (3) The pavement subgrade category:
A - High
B - Medium
C - Low
D - Ultra-low
 - (4) The maximum allowable tire pressure is reported by either:
W - Unlimited, no tire pressure limitation
X - High, limited to 1.75 MPa 254 psi
Y - Medium, limited to 1.25 MPa 181 psi
Z - Low, limited to 0.50 MPa 73 psi
 - (5) Pavement evaluation method:
T - Technical evaluation
U - By experience of aircraft using the pavement

NOTE: Prior permission from the airport controlling authority is required when the ACN of the aircraft exceeds the published PCN or aircraft tire pressure exceeds the published limits.

NOTE: ACN/PCN values are depicted in this publication for military aerodromes only. For other aerodromes, contact the operator.

AIRCRAFT LOAD RATING/PAVEMENT LOAD RATING (ALR/PLR) SYSTEM

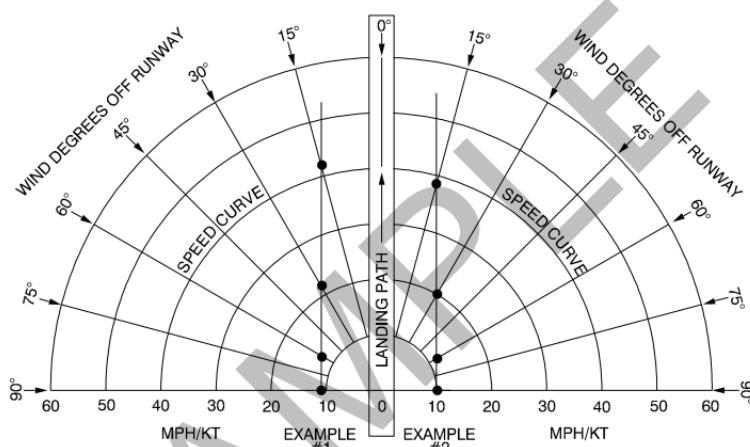

The Aircraft Load Rating/Pavement Load Rating (ALR/PLR) system for reporting runway pavement strengths is based on Transport Canada's design procedures for airfield pavements. From a pavement structural viewpoint, an aircraft can operate on an airport pavement provided that the Aircraft Load Rating (ALR) is equal to or less than the Pavement Load Rating (PLR) and the tire pressure of the aircraft does not exceed the tire pressure restriction (if any) assigned to the pavement. For information regarding PLR values, contact the airport operator.

CROSS-WIND LANDING LIMITATIONS – LIGHT AIRCRAFT

Approximately 10% of all aircraft accidents involving light aircraft in Canada are attributed to pilot failure to compensate for cross-wind conditions on landing.

Aircraft of United States manufacture are designed to withstand groundlooping tendencies on landing in 90-degree cross-winds up to a velocity equal to 0.2 (20 per cent) of their stalling speed.

This information in conjunction with the known stalling speed of a particular aircraft makes it possible to use the cross-wind component graph printed below to derive a "general rule" for most light aircraft manufactured in the United States. Aircraft Owner's Manual may give higher or limiting cross-winds. Examples of the method used in this interpolation are shown below:

EXAMPLE #1 – Aircraft with a stalling speed of 60 MPH.

Wind-degree Off Runway

Permissible Wind Speeds

90-degrees	(0.2 x 60 MPH stalling speed)	12 MPH
60-degrees	Using cross-wind component graph	14 MPH
30-degrees	Using cross-wind component graph	24 MPH
15-degrees	Using cross-wind component graph	45 MPH

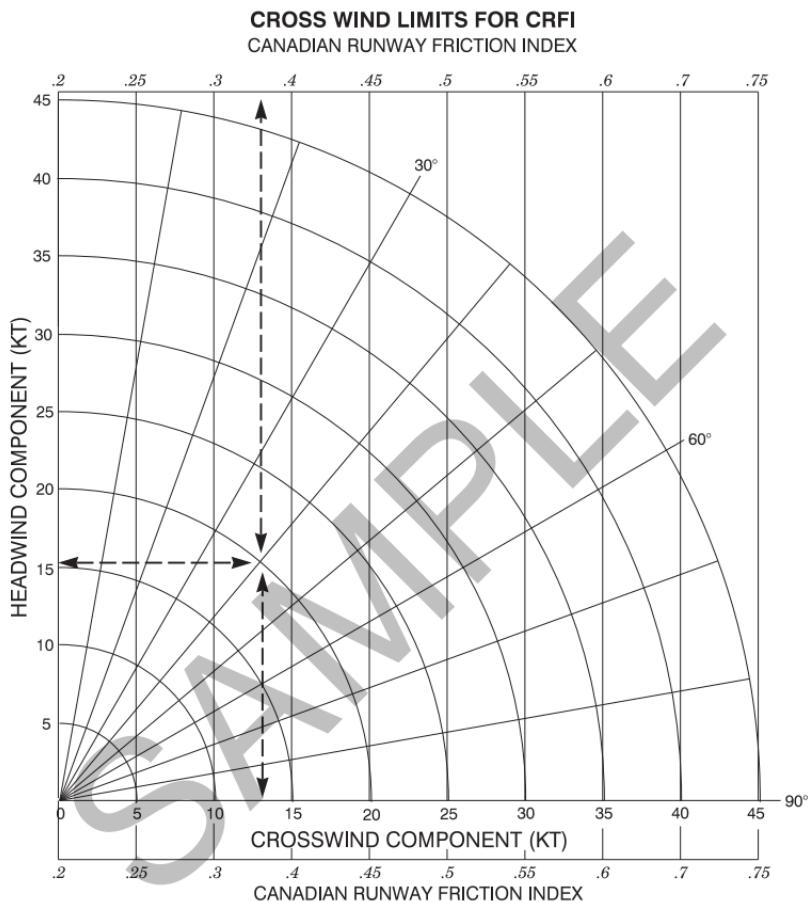

EXAMPLE #2 – Aircraft with a stalling speed of 50 Kt.

Wind-degree

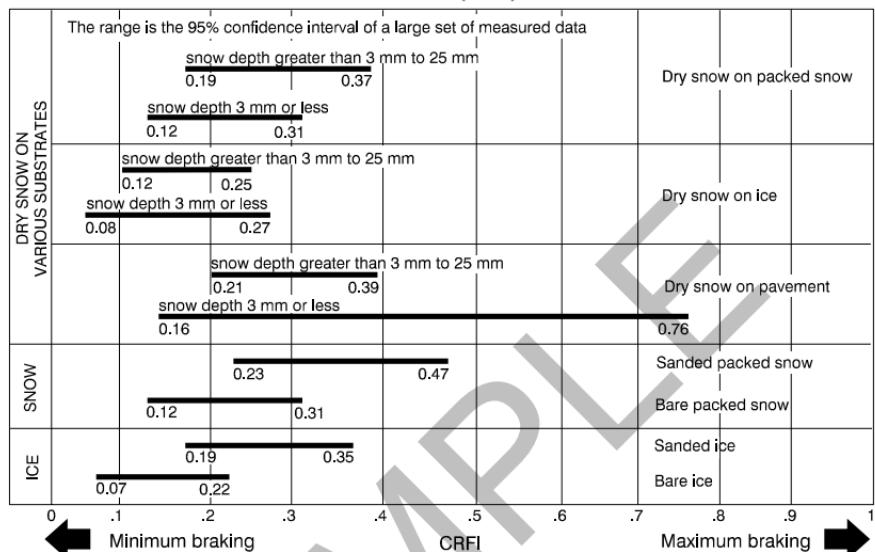

Permissible Wind Speeds

90-degrees	(0.2 x 50 Kt stalling speed)	10Kt
60-degrees	Using cross-wind component graph	12Kt
30-degrees	Using cross-wind component graph	20Kt
15-degrees	Using cross-wind component graph	38Kt

A80 GENERAL

RUNWAY SURFACE CONDITION (RSC) AND CRFI EQUIVALENT

MINIMUM AND MAXIMUM CRFIs FOR VARIOUS SURFACES

SURFACE	LOWER CRFI LIMIT	UPPER CRFI LIMIT
Bare Ice	No Limit	0.3
Bare Packed Snow	0.1	0.4
Sanded Ice	0.1	0.4
Sanded Packed Snow	0.1	0.5
Dry Snow on Ice (depth 3 mm or less)	No limit	0.4
Dry Snow on Ice (depth 3 mm to 25 mm)	No limit	0.4
Dry Snow on Packed Snow (depth 3 mm or less)	0.1	0.4
Dry Snow on Packed Snow (depth 3mm to 25 mm)	0.1	0.4
Dry Snow on Pavement (depth 3 mm or less)	0.1	Dry Pavement
Dry Snow on Pavement (depth 3 mm to 25 mm)	0.1	Dry Pavement

AIRCRAFT MOVEMENT SURFACE CONDITION REPORTS

NOTAMs on Aircraft Movement Surface Condition Reports (AMSCR) are issued to alert pilots to natural surface contaminants, such as snow, ice or slush, which could affect aircraft braking performance. The RSC section of the report provides runway surface information describing the runway condition in abbreviated plain language, while the CRFI section describes braking action quantitatively using numerical format as described in section TC AIM AIR.

Because of mechanical and operational limitations, runway friction readings produced by decelerometer devices may result in inaccurate readings under certain surface conditions. As a result, runway friction readings will not be taken and a CRFI will not be provided to air traffic services (ATS) or pilots when any of the following conditions are present:

- (a) the runway surface is simply wet or damp with no other type of contaminant present;
 - (b) there is a layer of slush on the runway surface with no other type of contamination condition present;
 - (c) there is wet snow on the runway surface that when stepped on or driven on splatters, turns to slush, or results in the presence of visible water;
- or

A82 GENERAL

- (d) there is dry snow or wet snow on the runway surface exceeding 2.5 centimetres (1 inch) in depth.

When available, a CRFI reading will be issued along with the RSC in order to provide an overall descriptive picture of the runway condition.

A NOTAMJ (AMSCR NOTAM) is provided when:

- (a) there is frost, snow, slush or ice on a runway;
- (b) there are snow banks, drifts or windrows on or adjacent to a runway;
- (c) sand or ice control chemicals are applied to or removed from a runway;
- (d) the cleared runway width falls below published width;
- (e) the runway lights are obscured or partially obscured by contaminants;
- (f) there is a significant change in runway surface conditions including a return to bare and dry conditions;
- (g) as per required minimum inspection frequency.

When a deposit is present but the depth is not measurable, the word "TRACE" is used. Otherwise, the depth is expressed in inches or feet or both. Whole values are used when the depth is above 1 inch (1 INS). When the depth is less than 1 inch, the decimal system is used.

If provided by the Airport Authorities, conditions of taxiways and aprons are disseminated in the NOTAMJ.

The maximum validity of NOTAMJ is 24 hours. After this period, NOTAMJ are no longer considered valid and a new NOTAMJ must be issued as required. If after 24 hours a NOTAMJ is not replaced or cancelled by the aerodrome authority, the NOTAMJ is cancelled by NAV CANADA.

When clearing is not under way or expected to commence within the next 30 minutes, a notation such as "Clearing expected to start at (time in UTC)" will be added to the RSC report. When the meteorological conditions are such that the runway surface conditions are changing frequently, the NOTAM will include the agency and telephone number to contact for the current runway conditions. RSC/CRFI information may be broadcasted on the ATIS or available as a voice advisory from the control tower at controlled aerodromes and from the FSS at uncontrolled aerodromes where airport advisory service or RAAS is provided.

Application of the Canadian Runway Friction Index (CRFI).

1. The recommended landing distances in Table 1 are based on a 95% level of confidence. A 95% level of confidence means that in more than 19 landings out of 20, the stated distance in Table 1 will be conservative for properly executed landings with all systems serviceable on runway surfaces with the reported CRFI.
2. Table 1 will also be conservative for turbojet and turboprop-powered aeroplanes with reverse thrust, and additionally, in the case of turboprop-powered aeroplanes, with the effect obtained from discing.
3. The recommended landing distances in the CRFI Table 1 are based on standard pilot techniques for the minimum distance landings from 50 ft, including a stabilized approach at V_{ref} using a glideslope of 3° to 50 ft or lower, a firm touchdown, minimum delay to nose lowering, minimum delay time to deployment of ground lift dump devices and application of brakes, and sustained maximum antiskid braking until stopped.
4. Landing field length is the landing distance divided by 0.6 (turbojets) or 0.7 (turboprops). If the Aeroplane Flight Manual (AFM) expresses landing performance in terms of landing distance, enter the table from the left-hand column. However, if the AFM expresses landing performance in terms of landing field length, enter the table from one of the right-hand columns, after first verifying which factor has been used in the AFM.

Application of the Canadian Runway Friction Index (CRFI)

- The recommended landing distances in Table 2 are based on a 95% level of confidence. A 95% level of confidence means that in more than 19 landings out of 20, the stated distance in Table 2 will be conservative for properly executed landings with all systems serviceable on runway surfaces with the reported CRFI.
- The recommended landing distances in Table 2 take into account the reduction in landing distances obtained with the use of discing and/or reverse thrust capability for a turboprop-powered aeroplane and with the use of reverse thrust for a turbojet-powered aeroplane. Table 2 is based on the Table 1 recommended landing distances with additional calculations that give credit for discing and/or reverse thrust. Representative low values of discing and/or reverse thrust effect have been assumed, hence the data will be conservative for properly executed landings by some aeroplanes with highly effective discing and/or thrust reversing systems.
- The recommended landing distances in CRFI Table 2 are based on standard pilot techniques for the minimum distance landings from 50 ft, including a stabilized approach at V_{ref} using a glideslope of 3° to 50 ft or lower, a firm touchdown, minimum delay to nose lowering, minimum delay time to deployment of ground lift dump devices and application of brakes and discing and/or reverse thrust, and sustained maximum antiskid braking until stopped. In Table 2, the air distance from the screen height of 50 ft to touchdown and the delay distance from touchdown to the application of full braking remain unchanged from Table 1. The effects of discing/reverse thrust were used only to reduce the stopping distance from the application of full braking to a complete stop.

4. Landing field length is the landing distance divided by 0.6 (turbojets) or 0.7 (turboprops). If the AFM expresses landing performance in terms of landing distance, enter the table from the left-hand column. However, if the AFM expresses landing performance in terms of landing field length, enter the table from one of the right-hand columns, after first verifying which factor has been used in the AFM.

LIGHTING

The **LIGHTING** sub-heading describes the types of runway lighting available for individual runways at land aerodromes and for pads at heliports (heliport lighting systems are described at the end of this section).

In Southern and Northern Domestic Airspace operational runways are identified by two-digit runway number designators followed by "L", "R" or "C" if required. For land aerodrome lighting, the individual runway designator is followed by a short dash and approach lighting, then by threshold and runway lighting within parentheses, and finally by visual approach system types. All of these are in coded form and can be identified by using the legend. Runways are listed in pairs and by increasing order of designators, e.g., 05L-23R, 05R-23L, and 10-28.

At some aerodromes the lighting systems may be left on continuously, however many aerodromes are lighted only on request or by radio (ARCAL). The method and times of operation are therefore described for non-continuous systems.

Aerodrome Beacon: At some aerodromes the aerodrome beacon is also operated by the ARCAL system. At these sites the aerodrome beacon may therefore be selected "ON" by keying the microphone in the sequence specified in this Supplement for activating the type J or type K ARCAL system. The aerodrome beacon will then commence the 15 minute timed operating cycle with the other aerodrome lighting.

Some aerodromes may use retro-reflective markers in place of lights to mark the edges of a runway or helipad. A fixed white light or strobe light will be installed at each end of the runway to assist pilots in locating and aligning the aircraft with the runway, so that the aircraft landing lights will be reflected by the markers. Retro-reflective markers are indicated by the code "RR".

Aircraft Radio Control of Aerodrome Lighting

AIRCRAFT RADIO CONTROL OF AERODROME LIGHTING (ARCAL)

Type J To operate all aerodrome lighting for duration of approximately 15 minutes key microphone 5 times within 5 seconds. The timing cycle may be restarted at anytime by repeating the keying sequence.

NOTE: Some systems will indicate when the duration period is over by flashing once, then remaining on for a further 2 minutes before extinguishing completely. Other systems offer no indication that the period is ending. The control system may operate H24 or between sunset and sunrise.

Type K To operate all aerodrome lighting for a duration of approximately 15 minutes, key microphone 7 times initially. This will ensure all lights are on maximum intensity. The intensity may be adjusted up or down to any one of three settings by keying the microphone 7, 5, or 3 times within 5 seconds for high, medium, or low intensity settings respectively. The timing cycle may be restarted at any time by repeating the initial keying sequence. Where Runway Identification Lights (code AS) are available, keying the microphone three times on the appropriate frequency will turn them off.

COMMUNICATIONS (COMM)

The term "(bil)" when placed after the term "COMM" indicates that all services listed below are offered bilingually. When bilingual services are limited, the term "(bil)" will precede the appropriate service.

FREQUENCIES:

A frequency followed by an "X" means the frequency can be requested through the control agency under which it is listed. If there are other limitations placed upon availability of frequencies, these will be indicated. Frequencies published followed by the letter "T" or "R" indicate that the facility will only transmit or receive respectively on that frequency; when followed by the letter "P" the frequency is a back-up for precision approach radar (see "NAVIGATION" section for this legend). When VHF frequencies are quoted to three places of decimals it indicates 25KHZ separation. HF frequencies used by the Canadian Flight Service Stations are capable of SSB J3E emission only. Frequencies printed in bold type indicate a high altitude frequency (starting at FL180 and above, unless otherwise indicated).

EMERGENCY FREQUENCIES:

Within this Supplement emergency frequencies are listed within this directory as (V) indicating 121.5 (U) indicating 243.0 and (E) indicating 121.5 and 243.0.

CALL SIGN:

The aerodrome name as published in the CFS is used to form the call sign of an associated ground station. When the aerodrome name is different from the community (location) name, it is published following the community name and separated by an oblique (/). For unique cases where the call sign is different from the aerodrome name, the call sign will be added before the frequency.

Where "tfc" (traffic) is indicated (after the call sign in unique cases), a ground station may not necessarily exist. An advisory broadcast transmission should be made in this instance.

FLIGHT ADVISORY AND INFORMATION SERVICE:

NAV CANADA operates flight service stations and flight information centres that provide flight advisory and information services to enhance flight safety and efficiency. These services are obtained by calling the appropriate FSS or FIC followed by the word RADIO. The services provided by FSSs and FICs are listed below. Details concerning these services are presented in TC AIM RAC.

(a) Flight service stations and flight information centres (RADIO)

FSSs are located at selected aerodromes across Canada. They provide airport advisory service, vehicle control service and VHF direction finding. These services are primarily intended for the arrival and departure phases of a flight to an aerodrome within an MF area, and for transit through an MF area, served by an FSS.

FICs are established at various locations across Canada. They provide pilot briefing service, flight information service en route (FISE), aeronautical broadcast service, VFR flight plan alerting service and flight regularity message service. These services are intended for pre-flight planning and for the en route phase of flight.

FSSs and FICs provide alerting emergency assistance service and NOTAM information service. Selected units may also provide remote aerodrome advisory service (RAAS), vehicle advisory service and weather observation service.

(b) Remote Communications Outlet (RCO)

A remote communications outlet (RCO) is a transceiver remotely established from an FSS or FIC for the provision of communications between aircraft and the FSS or FIC. An RCO enables an FSS to provide RAAS for aerodromes located within an MF area and an FIC to provide FISE on a FISE frequency.

At FISE RCO sites where a FISE frequency and 126.7 (bcst) are indicated, the 126.7 MHz frequency is unmonitored and inactive. However, 126.7 MHz communications equipment is available at these RCO sites and flight service specialists at the FIC will selectively activate the 126.7 MHz RCO transceiver when required in order to provide the aeronautical broadcasting service (SIGMET, urgent PIREP safety messages) or to conduct communication searches for overdue aircraft. When the 126.7 MHz transceiver is selected, the FISE transceiver is activated also for simultaneous broadcast on both frequencies.

At aerodromes where RAAS is provided part-time, during the hours that RAAS is not provided, information required to conduct an instrument approach (wind direction/speed, altimeter setting, runway condition), special VFR approvals (for sites within control zones) and IFR departure clearances, may be obtained from the FIC via the FISE RCO frequency or from the ACC via the PAL frequency, as appropriate. In addition, when RAAS is not provided, vehicles operators will be monitoring the MF while on the manoeuvring area of the aerodrome. Pilots will communicate directly with the vehicle operators to obtain the vehicle's position and operator intentions for coordinating the aircraft's arrival or departure. An RCO may also be used to accept position reports and relay ATC clearances.

NOTE: See TC AIM RAC for details.

(c) Dial-up Remote Communications Outlet (DRCO)

A DRCO is a standard RCO which has had a dial-up unit installed to connect the pilot with a flight information centre via a commercial telephone line. The line is "opened" or "activated" by the pilot or by the flight information centre.

Activation of the system by the pilot is accomplished via the aircraft radio transmitter by keying the microphone button 4 times with a deliberate and constant action on the published DRCO frequency. The microphone push-to-talk button should be held down a fraction of a second (1/4 is optimum) for each keying action with no more than 1 second between each action. The entire process should take slightly less than 10 seconds. The remote dial-up unit is designed to accept this constant and deliberate action to reduce the possibility of inadvertent activation from other sources. Consequently, if a microphone is keyed more than 4 times or too rapidly (or too slowly), the system will not activate.

Once the communication link has been established, the DRCO equipment will answer the pilot with a pre-recorded voice message: "Link Established". The link can only be deactivated by the ATS unit.

Activation of the DRCO - Pilot Procedures

- (i) Select the published RCO frequency on the aircraft radio transceiver.
- (ii) Key the radio microphone distinctly 4 times in a row, with no more than 1 second between each keying. If the keying procedure is successful, the pilot will hear a dial tone, signalling pulses (e.g., touch tones), and finally a ringing signal (see Note).
If the keying procedure has been successful, but the line is not available, the equipment will automatically disconnect, and the message "Try Again" will be broadcast.
- (iii) Wait for the DRCO equipment to answer with the pre-recorded voice message "Link Established". This reply confirms that the phone link with ATS has been established. The pilot must now initiate the radio conversation as per standard radiotelephony practices e.g., "Quebec Radio, this is CESSNA GOLF ALFA DELTA TANGO, over". It is important to note that the ATS Specialist may be performing other duties (e.g., working on another frequency or taking a weather observation) and may not be able to acknowledge the pilot's radio call right away.
- (iv) The RCO line can only be disconnected by the ATS unit.
- (v) A "Call Terminated" message indicates that the telephone line has been inadvertently disconnected.

NOTE: If the dial tone, signalling, and ringing are not heard, the pilot can assume that either:

- (i) the RCO is not within the radio range of the aircraft's transceiver; or
- (ii) the RCO line has already been opened, and there is a pause in the communication between the pilot of another aircraft and the ATS unit. The pilot may assume that the line is open and attempt to initiate communications with ATS.

If no reply is received from ATS within a reasonable time interval, the pilot should attempt the keying procedure when in closer proximity to the RCO site.

MANDATORY FREQUENCY (MF):

The designation of an MF Area is indicated by the **MF** entry, e.g.,

COMM	MF	radio 118.7 04-12Z‡ 5NM 3100 ASL (CAR 602.98)
-------------	-----------	---

Within MF Areas, MF Reporting Requirements (CAR 602.98) are mandatory.

Transport Canada has designated a Mandatory Frequency (MF) for use at selected uncontrolled aerodromes or aerodromes that are uncontrolled between certain hours. Aircraft operating within the area in which MF is applicable (MF area), on the ground or in the air, shall be equipped with a functioning radio capable of maintaining two-way communication, and specified reporting procedures shall be followed.

An MF area will be established at an aerodrome if the traffic volume and mix of aircraft traffic at that aerodrome is such that there would be a safety benefit derived from implementing MF procedures. There may or may not be a ground station in operation at the aerodrome for which the MF area has

A94 GENERAL

been established. When a ground station is in operation, for example an FSS, an RCO through which RAAS is provided, a CARS or an approach UNICOM (AU) then all aircraft reports that are required for operating within, and prior to entering an MF area, shall be directed to the ground station. However, when the ground station is not in operation, then all aircraft reports that are required for operating within, and prior to entering an MF area, shall be broadcast.

At aerodromes where a MF is located and the volume of traffic is such that a second frequency is needed to alleviate frequency congestion, the Minister may exempt pilots from the requirements of CAR 602.97(2), 602.98(1) and 602.99 and specify airport operating restrictions in the Canada Flight Supplement (CFS) for use of a ground advisory (GND ADV) frequency; used for the provision of traffic information, pre-taxi clearances and other advisory information.

Pilots must still adhere to CAR 602.100 to 602.103 inclusive.

The radius from the aerodrome centre and the vertical limit of the airspace above sea level (ASL) within which the Mandatory Frequency (MF) applies will also be shown in the **MF** entry.

AERODROME TRAFFIC FREQUENCY (ATF):

An Aerodrome Traffic Frequency (ATF) is published in the Supplements and is normally designated for active, uncontrolled aerodromes that do not meet the criteria for mandatory frequencies. This is to ensure that all radio equipped aircraft operating on the ground or within the specified (ATF) area, are listening on a common frequency and following a common reporting procedure.

The ATF will normally be the frequency of the ground station (UNICOM or airport radio) where one exists or 123.2 MHz where a ground station does not exist.

The radius from the aerodrome center and the vertical limit of the airspace above sea level (ASL) within which the ATF applies, will be shown in the **COMM** sub-heading.

MF/ATF INITIAL CONTACT ON ARRIVAL:

In accordance with CAR 602.97 (1) and (2), the pilot-in-command of a VFR or IFR radio-equipped aircraft operating within an MF area shall maintain a listening watch on the mandatory frequency specified for use in the MF area.

In accordance with CAR 602.101 (a), the pilot-in-command of a VFR aircraft arriving at an uncontrolled aerodrome that lies within an MF shall report before entering the MF area and, where circumstances permit, shall do so at least five minutes before entering the area, giving the aircraft's position, altitude and estimated time of landing and the pilot-in-command's arrival procedure intentions.

In accordance with CAR 602.104 (2) (a) (i), the pilot-in-command of an IFR aircraft who intends to conduct an approach to or a landing at an uncontrolled aerodrome, shall report the pilot-in-command's intentions regarding the operation of the aircraft five minutes before the estimated time of commencing the approach procedure, stating the estimated time of landing.

These procedures should also apply to aerodromes with ATF frequency.

UNCONTROLLED AERODROMES WITHOUT A PUBLISHED ATF:

Where no ATF has been published in the Supplements, the common frequency for the broadcast of aircraft position and pilot intentions when flying in the vicinity of an uncontrolled aerodrome is 123.2 MHz.

UNICOM:

Universal Communications (UNICOM) is an air-ground communications facility operated by a private agency to provide Private Advisory Station (PAS) service at uncontrolled aerodromes. At these locations the choice of frequencies are 122.7, 122.8, 123.0, 123.3, 123.5, 122.35, 122.95, 123.35, 122.725, 122.775 and 122.825 MHz.

The use of all information received from a UNICOM station is entirely at the discretion of the pilot. The frequencies are published in aeronautical information publications as a service to pilots, but Transport Canada takes no responsibility for the use made of a UNICOM frequency.

An approach UNICOM (AU) is an air-ground communications service that can provide approach and landing information to IFR pilots. The meteorological service provider is required to ensure that:

(a) meteorological instruments used to provide the approach and landing information meet the requirements stipulated under CAR 804.01(1)(c) or the applicable exemption; and

(b) UNICOM operators meet the training requirements stipulated under CAR 804.01(1)(c) or the applicable exemption.

Where the above standards are met, the AU operator may provide a station altimeter setting for the conduct of an instrument procedure. The wind speed and direction for the conduct of a straight-in

landing from an instrument approach, may or may not be provided at those facilities. Refer to the FLT PLN WX section to determine availability of wind speed and direction as well as altimeter settings from AU services.

Operators providing AU services may also advise pilots of the runway condition and the position of vehicles or aircraft on the manoeuvring area.

An AU will be indicated as "UNICOM (AU)" in the Canada Air Pilot and the Canada Flight Supplement.

AIRPORT RADIO (APRT RDO):

Airport Radio service is provided by Observer/Communicators (O/Cs) who are certified to conduct aviation weather observations and radio communications to facilitate aircraft departures and arrivals (O/Cs are authorized to provide an altimeter setting for an instrument approach) at uncontrolled aerodromes (see TC AIM RAC).

SOARING ACTIVITIES:

The frequency 123.4 MHz is allocated to soaring activities which include balloons, gliders, sailplanes, ultralights and hang gliders. It may also be designated as an ATF at aerodromes operated primarily for the purpose of soaring.

MILITARY FLIGHT ADVISORY UNIT (MFAU):

The designation of an MFAU is indicated by the MF entry at MIL A/D's, e.g.:

COMM	MF	Namao advsy 118.0 ltd hrs O/T tfc 118.0 5 NM 3400 ASL
-------------	-----------	---

DND operates MFAU, which provide flight information services that enhance flight safety and efficiency. These services are available by calling the appropriate station, followed by "Advisory" (i.e. "Namao Advisory"). MFAU provide enroute flight information, airport advisory, ground control, field condition reports, flight planning, alerting service, navigation assistance, NOTAMs, PIREPs, and weather reports. An MFAU may be used to accept and relay VFR and IFR position reports and ATC clearances.

MFAUs provide positive Ground Control - This is different than vehicle control as it also applies to aircraft on the ground. They also provide visual signals to aircraft in flight. The visual signals carry the same meaning as detailed in the TC AIM; however, they are accepted at pilots discretion. They are not control instructions; they are advisory only.

A96 GENERAL**LISTING OF NAVIGATION FACILITIES**

All navigation facilities are listed in Section D, Radio Navigation and Communications, under **RADIO NAVIGATION AIDS BY INDICATOR**.

Navigation facilities that are associated with an aerodrome, in that they serve as instrument approach aids, have the same name, or are within 5NM of the aerodrome, are also listed under the **NAV** sub-heading for that aerodrome. Facilities located farther than 5NM from an aerodrome which provide an operational advantage (i.e., remote aerodrome) may also be listed under the **NAV** sub-heading. However, no navigation facility is listed under the **NAV** sub-heading if it exceeds 25NM from the A/D, unless it is used for an IAP.

Navigation facilities which do not fit into these categories are listed in Section D, Radio Navigation and Communications, under **RADIO NAVIGATION AIDS BY LOCATION**.

NOTE: Pilots wishing to use geographic coordinates in decimal format can refer to Section D under **RADIO NAVIGATION AIDS BY INDICATOR**.

AUXILIARY CODES:

These codes may appear after frequencies of navigation facilities either singly or in multiples and signify the following:

- A ATIS (Automatic Terminal Information Service)
- T An ATC agency (except PAR) can transmit on this navigation frequency but not receive
- L NDB power output less than 50 watts
- M NDB power output 50 to less than 2000 watts
- H NDB power output 2000 watts or more
- Z 75MHz station location marker or fan marker

PRECISION APPROACH RADAR (PAR):

All military PAR's operate continuously during Instrument Metereological conditions unless otherwise indicated.

PROCEDURES (PRO)

PRO	<p>Arr 2000 ASL, dep 1500 ASL. Ski ops proh. Use Heli routes as depicted on Montréal VTPC or as directed by ATC. Noise Operating Criteria (CAR 602.105): A. Rwy 11 preferential. B. Dep rwy 29: climb on rwy centreline til 1000 ASL. C. Touch & go landings rwy 29 are not permitted btwn 23-06 (lcl time). Noise Restricted Runway (CAR 602.106): Circuits rwy 29, climb on rwy centreline, left turn to follow the P-line & route 337 til abeam shopping centre, then left turn downwind for circuit rwy 29.</p>
------------	--

*Helicopter procedures Noise Operating Criteria/
Noise Restricted Runway*

The **PRO** sub-heading deals with circuit patterns and heights, specific VFR routes within zones, restrictions to certain types of traffic, other aerial activities within zones, specific helicopter procedures and Noise Operating Criteria/Noise Restricted Runway.

Operating restrictions that are specified by the Minister in order to comply with Airport Certificate issued for the aerodrome/heliport will be indicated by (CAR 602.96).

Circuits are left hand patterns unless mandatory right hand patterns are specified (CAR 602.96), e.g.,

PRO	Rgt hand circuits rwys 22, 28 & 34 (CAR 602.96)
------------	---

Regulatory Noise Operating Criteria and/or Noise Restricted Runway are indicated by (CAR 602.105) or (CAR 602.106) respectively. For further information on Mandatory Noise Operating Criteria and/or Noise Restricted Runway, refer to AIP AD 2.21.

Approach/departure pathways are identified by arr/dep bearing(s) from heliport, slope in percent (if provided), classification (H1, H2 or H3) and any other restrictions.

Heliport Classification:

H1: Helicopters permitted to use an H1 heliport (arr/dep) shall be multi-engined and capable of remaining at least 4.5 m (15 feet) above all obstacles within the approach/departure area when operating in accordance with their Aircraft Flight Manual with one engine inoperative.

H2: Helicopters permitted to use an H2 heliport (arr/dep) shall be multi-engined.

H3: H3 heliport (arr/dep) available for single-engined or multi-engined helicopters.

This sub-heading is used in conjunction with the Aerodrome Sketch and with the VFR Terminal Procedures Chart (VTPC) when one is provided.

PRO	Arr/dep 053° & 233° fr heli, slope 16% (H2) Arr/dep 270° to 040°, slope 4.5% (H1) Arr/dep 105° fr heli, slope 6% (H3), day use only Arr/dep 356° fr heli, slope 12% (H2), day/night use Arr/dep 140° fr heli, slope 12% (H2), NVIS rqrdr for night use (CAR 602.96)
------------	---

CAUTION

Brief information describing conditions of a permanent (90 days or more) nature, regarding aeronautical facilities or hazards, knowledge of which is essential for the safe operation of aircraft.

C2 PLANNING**FLIGHT PLAN / FLIGHT ITINERARY**

The following lists the order of filing:

1. Aircraft identification (aircraft registration mark, flight number or radio call sign)
2. Flight rules
3. Type of flight
4. Number (if more than one)
5. Type of aircraft
6. Wake turbulence category
7. Equipment and capability (see page C3)
8. Departure aerodrome
9. Time of departure (UTC) proposed/actual
10. Cruising speed
11. Altitude / Level
12. Route
13. Destination aerodrome
14. Estimated elapsed time enroute (hrs & min)
15. SAR time*
16. Alternate aerodrome(s) (if required)
17. Other information
18. Endurance (hrs & min)
19. Total no of persons on board
20. Type of emergency locator transmitter*
21. Survival equipment (type, jackets, dinghies)
22. Aircraft colour and markings
23. Remarks (regarding other survival equipment)
24. Arrival report - where it will be filed*
25. Name and number or address of person or company to be notified if SAR action initiated*
26. Pilot's name
27. Pilot's licence no (Canadian pilot licence only)*

* Not required in an ICAO flight plan/flight itinerary.

MIL: Flights originating from locations where no DND flight planning facilities are available will file the NAV CANADA Canadian Flight Plan and Flight Itinerary form as described herein.

See TC AIM RAC Flight Planning for detailed instructions in completing the NAV CANADA form.

VFR POSITION REPORTS

Reports not required (except ADIZ reports) but will assist search and rescue if needed. Report to a Flight Information Centre or a Flight Service Station. In uncontrolled airspace report on the published FISE frequency and also broadcast on 126.7.

1. Identification
2. Position
3. Time over
4. Altitude
5. VFR Flight Plan
6. Destination

IFR POSITION REPORTS

1. Identification
 2. Position
 3. Time
 4. Altitude
 5. Type of flight plan or flight itinerary*
 6. Next reporting point and ETA**
 7. Name only of the next succeeding reporting point
 8. Remarks
- * If providing position reports via Automatic Dependant Surveillance (ADS) it is not necessary to indicate the type of flight plan.
- ** If the time estimate for the next applicable reporting point differs from the previously reported estimate by three minutes or more, a revised estimated time should be notified as soon as possible to the appropriate Air Traffic Services (ATS) unit.

CONTENTS OF AN ARRIVAL REPORT

1. The aircraft registration mark, flight number or radio call sign
2. The type of flight plan or flight itinerary
3. The departure aerodrome
4. The arrival aerodrome
5. The date and time of arrival

PIREP

1. Location of phenomena in relation to NAVAID or aerodrome or coordinates and time
2. Altitude
3. Aircraft type
4. Cloud (Base, Amount, Top)
5. Temperature
6. Wind direction and speed
7. Turbulence (intensity, type, altitude)
8. Icing (intensity, type, altitude)
9. Remarks

EQUIPMENT PREFIXES AND SUFFIXES

AIRCRAFT

- /H – HEAVY, to indicate an aircraft type with a maximum certificated takeoff mass of 136,000 kg (300,000 lbs) or more.
- /M – MEDIUM, to indicate an aircraft type with a maximum certificated takeoff mass of less than 136,000 kg (300,000 lbs) but more than 7,000 kg (15,500 lbs).
- /L – LIGHT, to indicate an aircraft type with a maximum certificated takeoff mass of 7,000 kg (15,500 lbs) or less.

Separate the type of aircraft and wake turbulence category from the COM/NAV equipment by a hyphen (-), then, following the COM/NAV suffixes add a forward slash (/) and denote the SSR equipment.

(a) COM/NAV equipment

INSERT one letter as follows:

N – if no COM/NAV approach aid equipment for the route to be flown is carried, or the equipment is unserviceable

or

S – if standard COM/NAV/approach aid equipment for the route to be flown is carried and serviceable (see Note 1),

and/or

INSERT one or more of the following letters to indicate the serviceable COM/NAV/approach aid equipment and capabilities available (see Note 6):

A	GBAS landing system	L	ILS
B	LPV (APV with SBAS)	M1	ATC SATVOICE (INMARSAT)
C	LORAN C	M2	ATC SATVOICE (MTSAT)
D	DME	M3	ATC SATVOICE (Iridium)
E1	FMC WPR ACARS	O	VOR
E2	D-FIS ACARS	P1	CPDLC RCP 400
E3	PDC ACARS	P2	CPDLC RCP 240
F	ADF	P3	SATVOICE RCP 400
G	(GNSS) (see Note 2)	P4-P9	Reserved for RCP
H	HF RTF	R	PBN approved (see Note 4)
I	Inertial Navigation	S	Standard Equipment (see Note 1)
J1	CPDLC ATN VDL Mode 2 (see Note 3)	T	TACAN
J2	CPDLC FANS 1/A HF DL	U	UHF RTF
J3	CPDLC FANS 1/A VDL Mode 4	V	VHF RTF
J4	CPDLC FANS 1/A VDL Mode 2	W	RVSM approved
J5	CPDLC FANS 1/A SATCOM (INMARSAT)	X	MNPS approved
J6	CPDLC FANS 1/A SATCOM (MTSAT)	Y	VHF with 8.33 kHz channel spacing capability
J7	CPDLC FANS 1/A SATCOM (Iridium)	Z	Other equipment carried or other capabilities (see Note 5)
K	(MLS)		

Any alphanumeric characters not indicated above are reserved.

C4 PLANNING

EQUIPMENT PREFIXES AND SUFFIXES (Cont'd)

NOTES:

1. If the letter S is used standard equipment is considered to be VHF RTF, VOR and ILS, unless another combination is prescribed by the appropriate ATS authority.
2. ICAO: If the letter "G" is used, the types of external GNSS augmentation, if any, are specified in "Other Information" following the indicator NAV/ and separated by a space.
Canadian: When using the letter "G" on an IFR flight plan, the GNSS receiver must be approved in accordance with the requirements specified in AIP Canada (ICAO) ENR 4.3. IFR-certified receivers are not mandatory for VFR flights. Pilots are encouraged to use the letter "G" on VFR flight plans when using any type of GNSS to assist VFR navigation.
3. See RTCA/EUROCAE Interoperability Requirements Standard For ATN Baseline 1 (ATN B1 INTEROP Standard - DO-280B/ED-110B) for data link services air traffic control clearance and information/air traffic control communications management/air traffic control microphone check.
4. If the letter R is used, the performance based navigation levels that can be met are specified in "Other Information" following the indicator PBN/. Guidance material on the application of performance based navigation to a specific route segment, route or area is contained in the Performance-Based Navigation Manual (Doc 9613).
5. If the letter "Z" is used, specify in "Other Information" the other equipment carried, or other capabilities, preceded by COM/, NAV/ and/or DAT, as appropriate.
6. Capabilities comprise the presence of relevant serviceable equipment on board the aircraft; equipment and capabilities commensurate with flight crew qualifications and, where applicable, authorization from the appropriate authority.

Surveillance equipment and capabilities

INSERT N if no surveillance equipment for the route to be flown is carried, or the equipment is unserviceable, OR

INSERT one or more of the following descriptors, to a maximum of 20 characters, to describe the serviceable surveillance equipment and/or capabilities on board:

SSR Modes A and C

- A Transponder - Mode A (4 digits-4096 codes)
- C Transponder - Mode A (4 digits-4096 codes) and Mode C

SSR Mode S

- E Transponder - Mode S, including aircraft identification, pressure-altitude and extended squitter (ADS-B) capability
- H Transponder - Mode S, including aircraft identification, pressure-altitude and enhanced surveillance capability
- I Transponder - Mode S, including aircraft identification, but no pressure-altitude capability
- L Transponder - Mode S, including aircraft identification, pressure-altitude, extended squitter (ADS-B) and enhanced surveillance capability
- P Transponder - Mode S, including pressure-altitude transmission, but not aircraft identification capability
- S Transponder - Mode S, including both pressure-altitude and aircraft identification capability
- X Transponder - Mode S with neither aircraft identification nor pressure-altitude capability

NOTE: Enhanced surveillance capability is the ability of the aircraft to down-link aircraft derived data via a Mode S transponder.

EQUIPMENT PREFIXES AND SUFFIXES (Cont'd)**ADS-B**

- B1 ADS-B with dedicated 1090 MHz ADS-B "out" capability
- B2 ADB-B with dedicated 1090 MHz ADS-B "out" and "in" capability
- U1 ADS-B "out" capability using UAT
- U2 ADS-B "out" and "in" capability using UAT
- V1 ADS-B "out" capability using VDL Mode 4
- V2 ADS-B "out" and "in" capability using VDL Mode 4

ADS-C

- D1 ADS-C with FANS 1/A capabilities
- G1 ADS-C with ATN capabilities

Alphanumeric characters not indicated above are reserved.

Example: ADE3RV/HB2U2V2G1

NOTE: Additional surveillance application should be listed in "Other Information" following the indicator SUR/.

Any other necessary information in the sequence shown hereunder, in the form of the appropriate indicator selected from those defined hereunder, followed by an oblique stroke and the information to be recorded.

STS/ Reason for special handling by ATS, e.g. a SAR mission, as follows.

ALTRV: for a flight operated in accordance with an altitude reservation.

ATFMX: for a flight approved for exemption from ATFM measures by the appropriate ATS authority.

FFR: for fire-fighting.

FLCTK: for a flight check for calibration of NAVAIDS.

HAZMAT: for a flight carrying hazardous material.

HEAD: for a flight with Head of State status.

HOSP: for a medical flight declared by medical authorities.

HUM: for a flight operating on a humanitarian mission.

MARSA: for a flight for which a military entity assumes responsibility for separation of military aircraft.

MEDEVAC: for a life critical medical emergency evacuation.

NONRVSM: for a non-RVSM capable flight intending to operate in RVSM airspace.

SAR: for a flight engaged in a search and rescue mission.

STATE: for a flight engaged in military, customs or police services.

Other reasons for special handling by ATS shall be denoted under the designator "RMK".

PBN/ Indication of RNAV and/or RNP capabilities: Include as many of the descriptors below as possible that apply to the flight, up to a maximum of eight entries, i.e. no more than 16 characters.

C6 PLANNING**RNAV Specifications to be Indicated in Flight Plan Item 18: Other Information**

A1	RNAV 10 (RNP 10)
B1	RNAV 5 all permitted sensors
B2	RNAV 5 GNSS
B3	RNAV 5 DME/DME
B4	RNAV 5 VOR/DME
B5	RNAV 5 INS or IRS
B6	RNAV 5 LORAN C
C1	RNAV 2 all permitted sensors
C2	RNAV 2 GNSS
C3	RNAV 2 DME/DME
C4	RNAV 2 DME/DME/IRU
D1	RNAV 1 all permitted sensors
D2	RNAV 1 GNSS
D3	RNAV 1 DME/DME
D4	RNAV 1 DME/DME/IRU

RNP Specifications to be Indicated in Flight Plan Item 18: Other Information

L1	RNP 4
O1	Basic RNP 1 all permitted sensors
O2	Basic RNP 1 GNSS
O3	Basic RNP 1 DME/DME
O4	Basic RNP 1 DME/DME/IRU
S1	RNP APCH
S2	RNP APCH with baro VNAV
T1	RNP AR APCH with RF (special authorization required)
T2	RNP AR APCH without RF (special authorization required)

ICAO has not yet allocated a two-digit alphanumeric character to describe RNP 2 under the PBN/ indicator. For an RNP 2 capable flight, enter a Z in item 10 and spell out "RNP2" after NAV/ in "Other Information (item 18)": NAV/RNP2

USE OF TRANSPONDER CODES**IFR:**

Controlled High Level Airspace	-	Mode A, Code 2000 plus Mode C, if no direction is given by ATC.
Uncontrolled High Level Airspace	-	Mode A, Code 2000 plus Mode C if available, if no direction is given by ATC.

Controlled Low Level Airspace above 12,500 ASL

-	Mode A, Code 1000 plus Mode C, if no direction is given by ATC.
---	---

All Other Low Level Airspace	-	Mode A, Code 1000 plus Mode C if available, if no direction is given by ATC.
------------------------------	---	--

VFR:

Code 1200, for operation at or below 12,500 ASL.

Code 1400, for operation above 12,500 ASL.

NOTE: If an aircraft leaves confines of an airspace in which a specific code was assigned, the pilot is responsible for changing to the applicable code above.

Emergencies	-	COMM Failure	-	Mode A, Code 7600
		Emergency	-	Mode A, Code 7700
		Hijack	-	Mode A, Code 7500

CAUTION: Pilots should select transponder codes with care so as to avoid inadvertent selection of emergency codes.

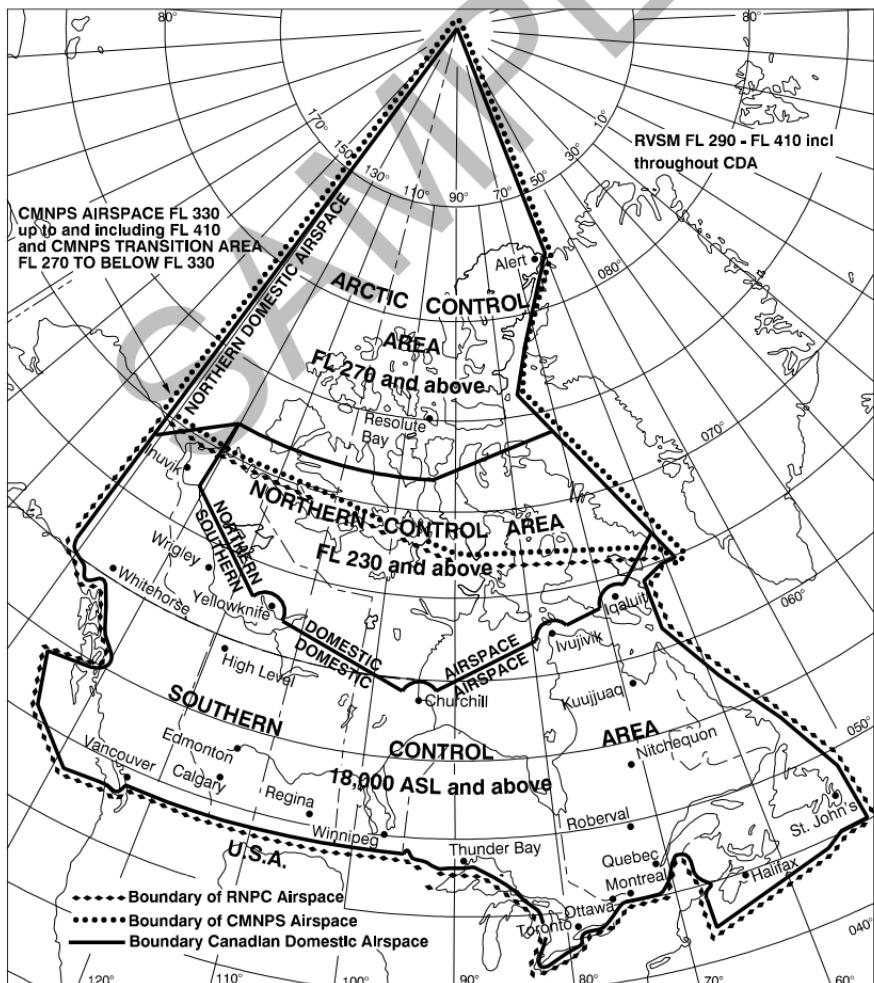

Flight crews of aircraft equipped with transponders capable of Mode C automatic altitude reporting capability are requested to adjust their transponders to transmit Mode C when operating in Canadian Airspace unless deactivation is requested by ATC.

SAMPLE

C8 PLANNING

EMERGENCY SECURITY CONTROL OF AIR TRAFFIC (ESCAT) PLAN

1. The ESCAT rules will only be implemented in times of crisis and war, and restrictions to aircraft movements will not be imposed for any greater time or degree than is necessary to meet the military tactical requirements. When the plan is implemented it applies to all Canadian airspace. The total plan including wartime air traffic priority numbers and ESCAT zones are contained in a joint DND/TC publication.
2. When notified that ESCAT is in effect, pilots of aircraft operation into or over Canada or planning to operate into or over Canada shall:
 - (a) comply with instructions from ATC units to change course or altitude, or to land;
 - (b) include the appropriate Wartime Air Traffic priority number when filing flight plans and obtain approval from an appropriate ATC unit prior to take-off; and
 - (c) make position reports as required by the instrument flight rules and/or as directed in applicable Command/Group Squadron Orders.

CANADIAN AIRSPACE BOUNDARIES

NOTE: - Only aircraft certified by state of registry as meeting Minimum Navigation Performance Specifications (MNPS) of either the North Atlantic (NAT) or Canada will be permitted to operate within the designated CMNPS airspace, unless the appropriate Air Traffic Control Unit indicates that the aircraft in question can be accommodated without penalizing CMNPS certified aircraft.

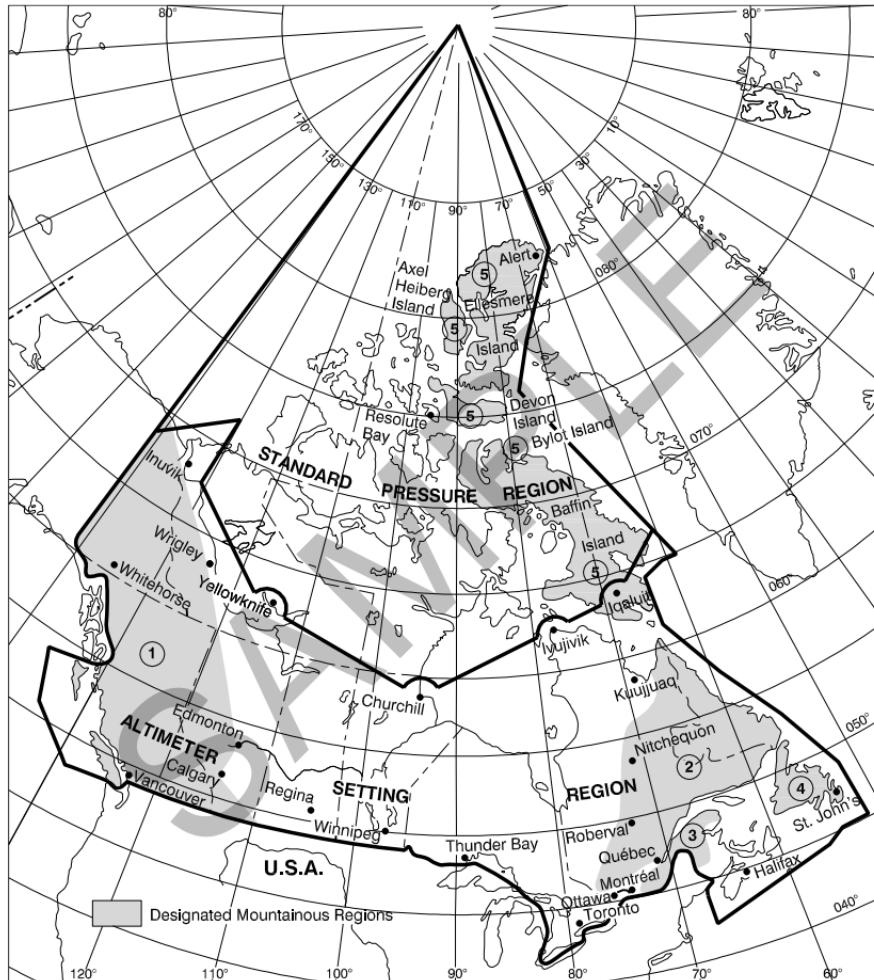

See TC AIM RAC for details.

- Reduced Vertical Separation Minimum (RVSM)

See TC AIM RAC for details.

SAMPLE

C10 PLANNING

ALTIMETER SETTING AND DESIGNATED MOUNTAINOUS REGIONS

Aircraft flying IFR in Designated Mountainous Regions outside of designated airways/air routes shall be flown at an altitude of at least 2000 feet above the highest obstacle within 5NM of the aircraft when in areas 1 & 5, or 1500 feet in areas 2, 3 & 4. Refer to Designated Airspace Handbook for the official area definitions.

CHARACTERISTICS OF AIRSPACE

CLASSIFICATION OF AIRSPACE

For further information regarding Canadian Airspace see the Transport Canada publication, the *Designated Airspace Handbook (DAH)*, TP 1820E.

Class "A" Airspace (IFR)

Controlled high level airspace within which only IFR flight is permitted. ATC separation is provided to all aircraft. The vertical dimensions of Class A airspace are as follows:

Southern Control Area—18,000 ASL to FL600 inclusive

Northern Control Area—FL230 to FL600 inclusive

Arctic Control Area—FL270 to FL600 inclusive

Class "B" Airspace (IFR and VFR)

Controlled airspace within which both IFR and VFR flights are permitted. All controlled low level airspace above 12,500 ASL or at and above the MEA, whichever is higher, up to but not including 18,000 ASL. ATC separation is provided to all aircraft.

Control zones and associated terminal areas may also be classified as Class B airspace.

Class "C" Airspace (IFR and VFR)

Controlled airspace within which both IFR and VFR flights are permitted, but VFR flights require a clearance to enter. ATC separation is provided for all IFR aircraft and, as necessary to resolve possible conflicts, between IFR and VFR aircraft.

Control zones and associated terminal areas may also be classified as Class C airspace.

Class "D" Airspace (IFR and VFR)

Controlled airspace within which both IFR and VFR flights are permitted, but VFR flights must establish two-way communication with the appropriate ATC agency prior to entering the airspace. ATC separation is provided only to IFR aircraft.

Control zones and associated terminal areas may also be classified as Class D airspace.

Class "E" Airspace (IFR and VFR)

All high level controlled airspace above FL600. Also, low level airways, low level fixed RNAV routes, control area extensions, transition areas or control zones established without an operating control tower may be classified Class E airspace.

Class "F" Airspace (IFR and VFR)

Airspace of specified dimensions. Class F airspace may be restricted airspace or advisory airspace, military operations areas or danger areas, and can be controlled airspace, uncontrolled airspace, or a combination of both.

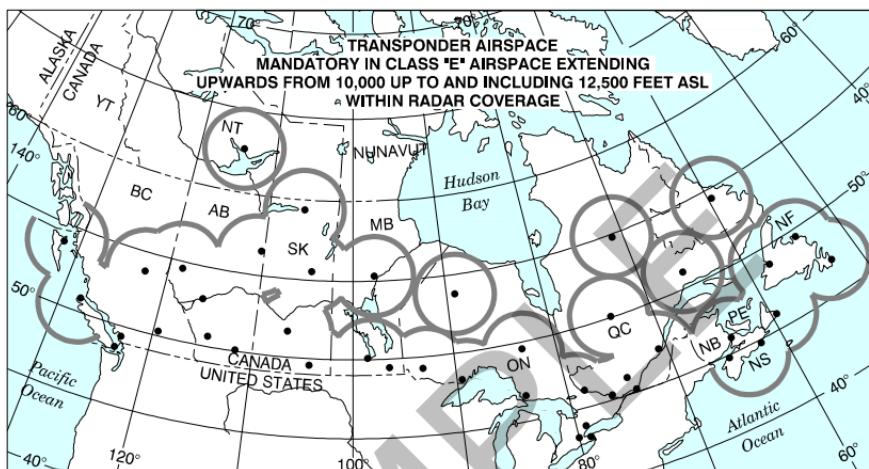

Class "G" Airspace (IFR and VFR)

Airspace within which IFR and VFR flights are not subject to control. Airspace not designated A, B, C, D, E, or F is classified G.

C12 PLANNING

CHARACTERISTICS OF AIRSPACE – Cont'd

TRANSPOUNDER AIRSPACE

TRANSPOUNDER REQUIREMENTS

Aircraft are required to be equipped with a functioning transponder incorporating an automatic pressure altitude reporting device when operating in the following airspace:

- a) all Class A airspace;
- b) all Class B airspace;
- c) all Class C airspace; and
- d) all Class D and Class E airspace that is specified as "Transponder Airspace" in the *Designated Airspace Handbook (DAH TP 1820E)*, as follows:
 - I. Class D TCAs and/or Class D CZs at the following aerodromes:
 - i. Vancouver, BC CZ
 - ii. Abbotsford, BC TCA
 - iii. Kelowna, BC Class D CAE,
 - iv. Fredericton, NB CZ, and
 - v. Halifax/Stanfield Intl, NS TCA and CZ;
 - II. Class E airspace of defined dimensions at the following aerodromes:
 - i. Victoria, BC
 - ii. Vancouver, BC
 - iii. Abbotsford, BC
 - iv. Christina Lake, AB
 - v. Conklin, AB
 - vi. Fort MacKay/Albian, AB
 - vii. Fort MacKay/Firebag, AB
 - viii. Fort MacKay/Horizon, AB
 - ix. Fort McMurray/Mildred Lake, AB
 - x. Kirby Lake, AB
 - xi. Primrose, AB
 - xii. Regina, SK
 - xiii. Saskatoon/John G. Diefenbaker, SK
 - xiv. Thunder Bay, ON
 - xv. Toronto, ON

-
- xvi Montréal (Mirabel), QC
 - xvii Moncton, NB
 - xviii Gander, NL
 - xix St. John's, NL
- e) All Class E airspace extending upwards from 10,000 ASL up to and including 12,500 ASL within radar coverage.

Pilots of IFR aircraft within controlled high level airspace shall adjust their transponder to reply on Mode A, Code 2000 and on Mode C unless otherwise instructed by ATC.

NOTE: To enhance the safety of IFR flight in uncontrolled high level airspace, pilots are urged to adjust their transponders to reply on Mode A, Code 2000, plus Mode C, unless otherwise instructed by ATC.

CONTROLLED LOW LEVEL AIRSPACE

Airway - 2200 AGL up to but not including 18,000 ASL - (for airway width see TC AIM, RAC).

Control Area Extension - Controlled airspace of defined dimensions within the Low Level Airspace extending upwards 2,200 AGL and above, unless otherwise specified.

Control Zone - Controlled airspace of defined dimensions extending vertically from the surface of the earth up to and including 3,000 feet above aerodrome elevation, unless otherwise specified.

Terminal Control Area - Controlled airspace of defined dimensions designated to serve arriving, departing and enroute aircraft.

Military Terminal Control Areas - Controlled airspace of defined dimensions normally established in the vicinity of a military aerodrome and within which special procedures and exemptions exist for military aircraft. The terminology "(Class B, C, D, or E equivalent)" used for the designation of MTCAs describes the equivalent level of service and operating rules for civilian aircraft operating within the MTCA and under military control.

Transition Area - Controlled airspace of defined dimensions extending upwards from 700 AGL unless otherwise specified, to the base of overlying controlled airspace.

CRUISING ALTITUDES & FLIGHT LEVELS APPROPRIATE TO AIRCRAFT TRACK

1. The appropriate altitude or flight level for aircraft in level cruising flight is determined in accordance with:
 - (a) the magnetic track in the Southern Domestic Airspace
 - (b) the true track in Northern Domestic Airspace.
2. Unless otherwise authorized by ATC the following VFR, CVFR or IFR cruising altitudes apply.
3. RVSM cruising flight levels appropriate to aircraft track are applicable in Designated RVSM Airspace.

C14 PLANNING

ALTITUDES OR FLIGHT LEVELS	AIRCRAFT TRACK	
	000° - 179°	180° - 359°
ABOVE FLIGHT LEVEL 290 FLY 4000' INTERVALS:	BEGINNING AT FLIGHT LEVEL 290 (FL 290, 330, 370, 410, 450)	BEGINNING AT FLIGHT LEVEL 310 (FL 310, 350, 390, 430, 470)
RVSM	FL 290, 310, 330, 350, 370, 390, 410	FL 300, 320, 340, 360, 380, 400
AT OR ABOVE 18,000 ASL BUT BELOW FL 290 FLY 2000' INTERVALS:	ODD FLIGHT LEVELS (FL 190, 210, 230, ETC.)	EVEN FLIGHT LEVELS (FL 180, 200, 220, ETC.)
BELOW 18,000 ASL: (FLY CORRESPONDING FLIGHT LEVELS IN STANDARD PRESSURE REGION) FLY 2000' INTERVALS:	IFR and CVFR	IFR and CVFR
	ODD THOUSANDS, ASL (1000, 3000, 5000, ETC.)	EVEN THOUSANDS, ASL (2000, 4000, 6000, ETC.)
	VFR	VFR
	ODD THOUSANDS plus 500 FT ASL (3500, 5500, 7500, ETC.)	EVEN THOUSANDS plus 500 FT ASL (4500, 6500, 8500, ETC.)

CHARACTERISTICS OF AIRSPACE – Cont'd**WEATHER MINIMA VFR FLIGHT**

AIRSPACE	VFR WEATHER MINIMA	
CONTROL ZONES	<ul style="list-style-type: none"> - FLIGHT VIS AND GROUND VIS WHEN REPORTED: NOT LESS THAN 3 MILES - DISTANCE FROM CLOUD: 1 MILE HORIZONTALLY AND 500' VERTICALLY - DISTANCE FROM GROUND OR WATER: 500' VERTICALLY 	
CONTROL AREAS	<ul style="list-style-type: none"> - FLIGHT VIS AND GROUND VIS WHEN REPORTED: NOT LESS THAN 3 MILES - DISTANCE FROM CLOUD: 1 MILE HORIZONTALLY AND 500' VERTICALLY 	
UNCONTROLLED AIRSPACE	1000 AGL OR ABOVE	<ul style="list-style-type: none"> - FLIGHT VIS: NOT LESS THAN 1 MILE DAY, 3 MILES NIGHT - DISTANCE FROM CLOUD: 2000' HORIZONTALLY AND 500' VERTICALLY
	BELOW 1000 AGL	<ul style="list-style-type: none"> - FLIGHT VIS: 2 MILES DAY (AEROPLANES), 1 MILE DAY (HELICOPTERS) (SEE NOTE), 3 MILES NIGHT - CLEAR OF CLOUD

NOTE: Aircraft may be operated below 1000 AGL in uncontrolled airspace during the day, in visibilities less than 2 miles for aeroplanes and 1 mile for helicopters, where they are authorized to do so in an air operator certificate, a private operator certificate or a flight training unit operator certificate - helicopter, as applicable.

SPECIAL VFR (Control zones only)

	Flight visibility and ground visibility when reported
All aircraft except rotorcraft	1 mile
Rotorcraft	1/2 mile

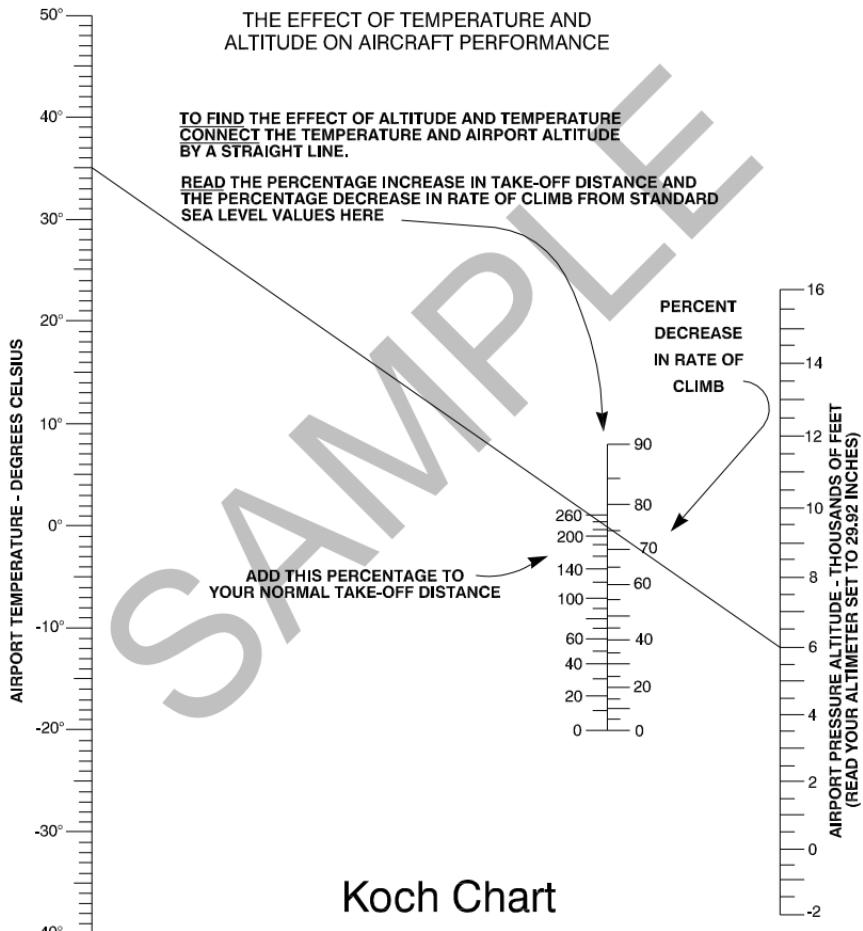

NOTES:

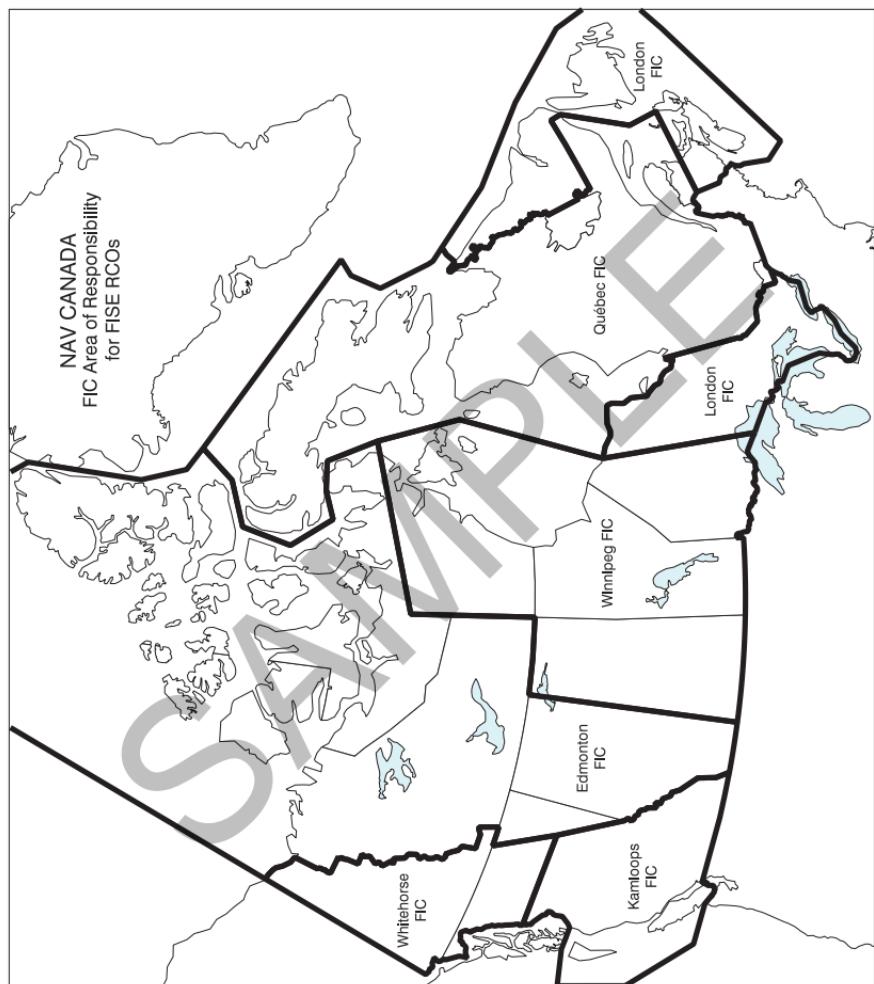

1. All aircraft including helicopters, must be equipped with a radio capable of communicating with the ATC unit and maintain a listening watch with the ATC unit.
2. Aircraft must operate clear of cloud and within sight of the ground at all times.
3. Helicopters should operate at such reduced airspeeds so as to give the pilot-in-command adequate opportunity to see other air traffic or obstructions in time to avoid a collision.
4. When the aircraft is not a helicopter and is being operated at night, ATC will only authorize special VFR where the authorization is for the purpose of allowing the aircraft to land at the destination aerodrome.

C16 PLANNING

CHARACTERISTICS OF AIRSPACE – Cont'd**VFR FLIGHT PLANS / ITINERARIES**

All persons intending to operate VFR within Canadian airspace must file a VFR flight plan or flight itinerary unless the flight will be conducted within 25NM of the departure aerodrome.

**BRITISH COLUMBIA – SPECIAL RADIO PROCEDURES IN THE VICINITY OF THE HAIDA GWAII
(QUEEN CHARLOTTE ISLANDS)**

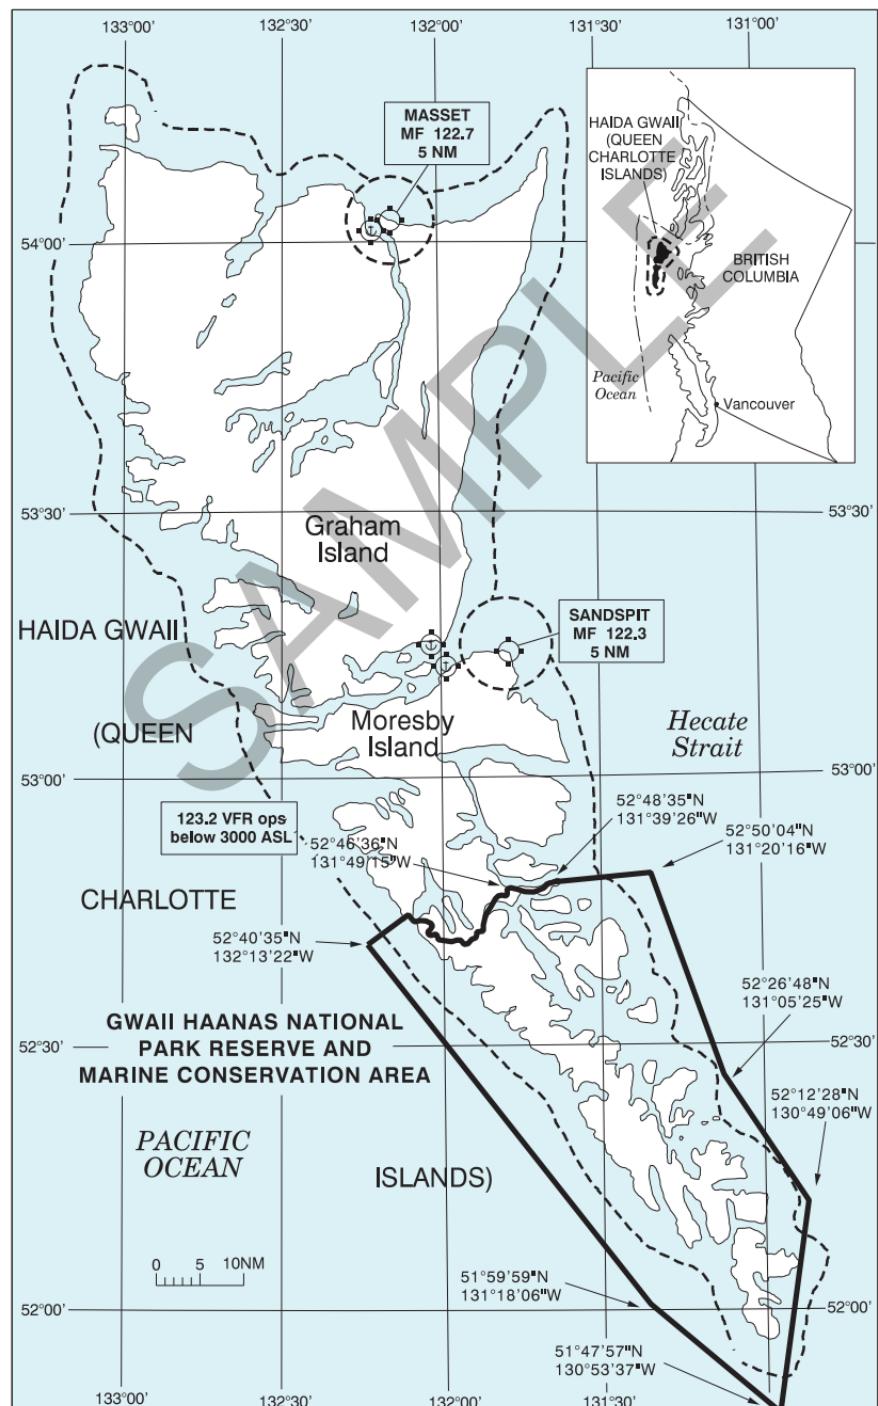

Due to the special conditions under which air traffic operate within the area of the Haida Gwaii (Queen Charlotte Islands), BC, the following special radio procedures have been established:

- 123.2 -** Below 3000 ASL while over or within 3 miles of the Haida Gwaii (Queen Charlotte Islands), unless an ATF frequency is already published in the CFS/CWAS.
- 126.7 -** Enroute traffic 3000 ASL or above.
- 122.3 -** Within the Sandspit (CYZP) MF.

Pilots are reminded to follow the Aerodrome Traffic Frequency (ATF) procedures described in the TC AIM.

C36 PLANNING

BRITISH COLUMBIA – SPECIAL RADIO PROCEDURES IN THE VICINITY OF THE HAIDA GWAII (QUEEN CHARLOTTE ISLANDS) (Cont'd)

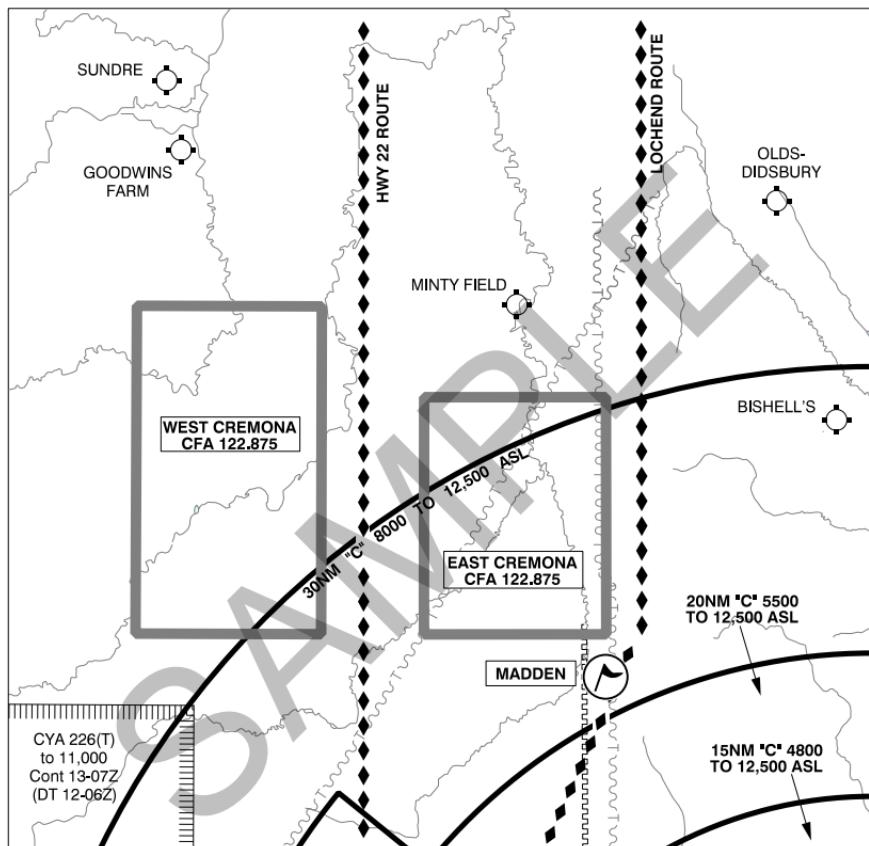

BRITISH COLUMBIA – VFR COMMON AIR-TO-AIR TRAFFIC FREQUENCY FOR FRASER RIVER CORRIDOR

Common air-to-air frequencies have been designated for use in the CYA flight-training areas that border the Fraser River (see backside of Vancouver VTA). To ensure pilots who fly along the Fraser River corridor and between the flight training CYAs can communicate to maintain situational awareness and avoid conflicts, the common air-to-air flight training frequencies have been designated for use along the corridor.

C38 PLANNING

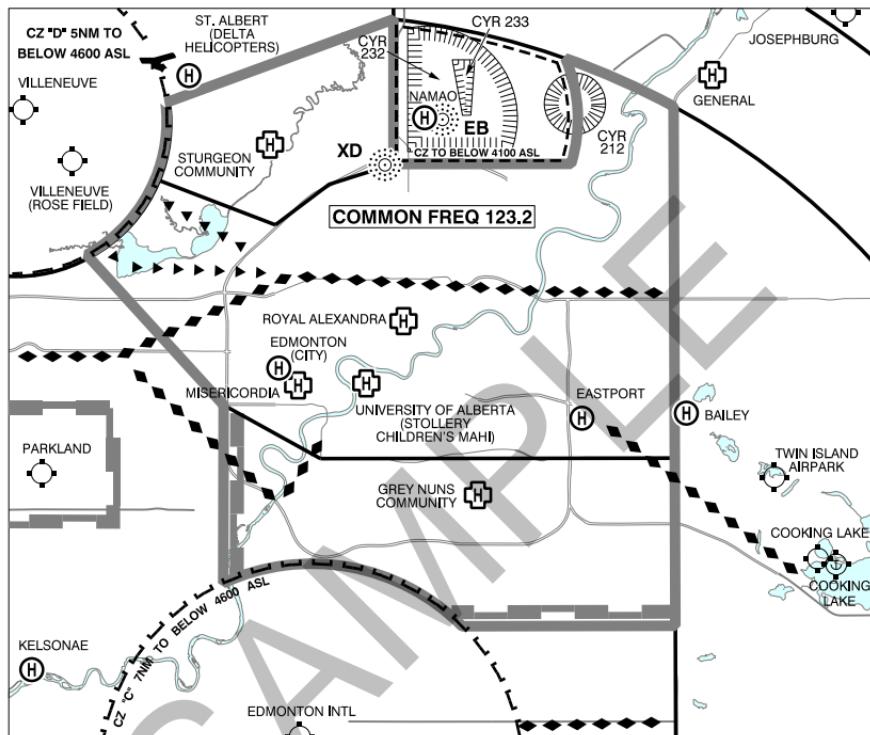

ALBERTA - CREMONA COMMON FREQUENCY AREA

Pilots are encouraged to use the designated common frequency when operating below Class C airspace within the designated areas. Radio transmissions on a common frequency should be the minimum required to provide the aircraft's position and pilot's intentions. Example transmission:

"CREMONA AREA TRAFFIC, CESSNA GOLF ALPHA BRAVO CHARLIE FOUR MILES NORTHWEST OF CREMONA, CONDUCTING FLIGHT TRAINING AT 7000 FEET "

Using a common frequency does not alleviate a pilot from the responsibility for monitoring and/or communicating on, when required, an ATC frequency, aerodrome traffic frequency (ATF), en-route frequency, or any other appropriate frequency.

ALBERTA - EDMONTON CITY ATF COMMON FREQUENCY AREA

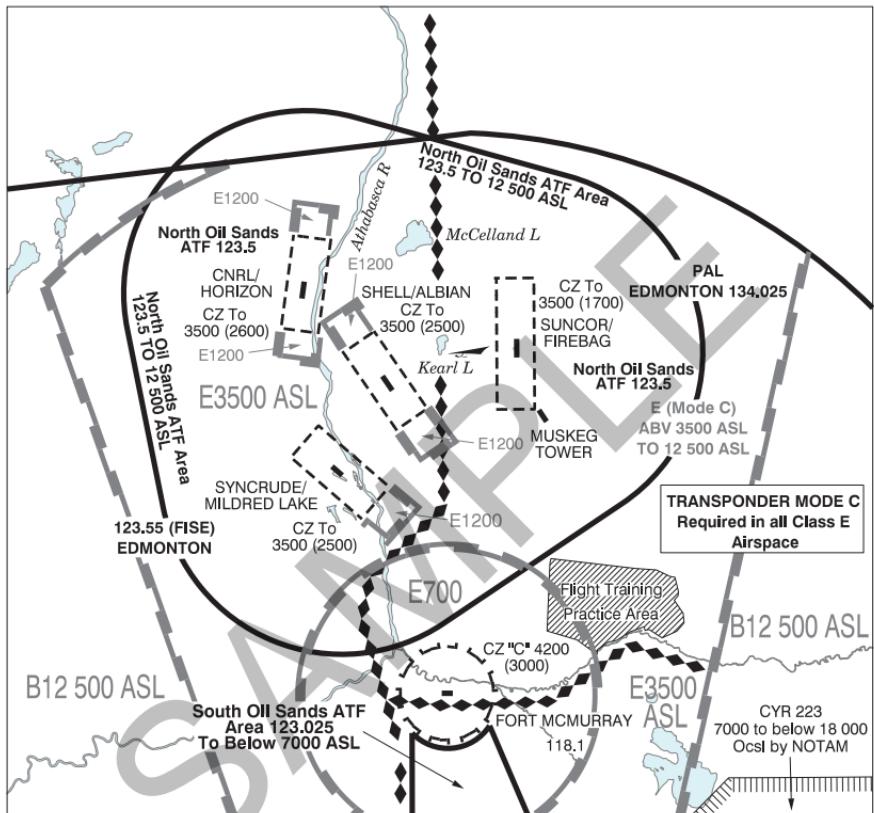

Pilots are encouraged to use the designated common frequency when operating below Class C airspace within the designated area. Radio transmissions on a common frequency should be the minimum required to provide the aircraft's position and pilot's intentions. Example transmission:

"EDMONTON AREA TRAFFIC, CESSNA GOLF ALPHA BRAVO CHARLIE TWO MILES WEST OF THE CEMENT PLANT, CONDUCTING A CITY TOUR AT 4000 FEET"

Using a common frequency does not alleviate a pilot from the responsibility for monitoring and/or communicating on, when required, an ATC frequency, aerodrome traffic frequency (ATF), or any other appropriate frequency.

C40 PLANNING

ALBERTA - NORTH OIL SANDS ATF AREA

Due to the special conditions under which air traffic operates within the North Oil Sands area in north-eastern Alberta, the following special radio procedures have been established:

ATF Pilot-to-Pilot

123.5 - North Oil Sands air traffic frequency: All pilots, prior to entering and while operating below 12,500 ft ASL while within the area joining a 20 NM radius centred on the Fort Mackay/Horizon, Fort McMurray/Firebag and Fort McMurray/Mildred Lake aerodromes, should broadcast their intentions and monitor and broadcast on the North Oil Sands air traffic frequency. This frequency is intended for pilot-to-pilot communications to aid in maintaining situational awareness with respect to other aircraft operating in the area. Pilots are reminded to follow the Aerodrome Traffic Frequency (ATF) procedures described in the TC AIM.

ALBERTA - NORTH OIL SANDS ATF AREA (Cont'd)**UNICOM / ATF**

123.3 - Albian UNICOM: All pilots arriving at, or departing from the Fort Mackay/Albian aerodrome must contact Albian UNICOM for company messages, local traffic and weather information.

122.8 - Firebag UNICOM: All pilots arriving at, or departing from the Fort Mackay/Firebag aerodrome must contact Firebag UNICOM for company messages, local traffic and weather information.

122.7 - Horizon UNICOM: All pilots arriving at, or departing from the Fort Mackay/Horizon aerodrome must contact Horizon UNICOM for company messages, local traffic and weather information.

123.5 - Mildred Lake TFC: All pilots arriving at, or departing from the Fort McMurray/Mildred Lake aerodrome must contact Syncrude Security for company messages and weather information.

123.2 - Muskeg Tower ATF: All pilots arriving at, or departing from the Muskeg Tower aerodrome should contact Muskeg Tower ATF for company messages.

123.2 - Birch Mountain ATF: All pilots arriving at, or departing from the Birch Mountain aerodrome should contact Birch Mountain ATF for company messages.

It is recommended that pilots complete any necessary company-related communications on the appropriate aerodrome frequency prior to entering the North Oil Sands ATF Area on arrival, and prior to ground manoeuvring for departure.

FISE

123.55 - Fort McMurray RCO: All pilots operating in the vicinity of Fort McMurray and requesting enroute flight information service should contact Edmonton FIC on the Fort McMurray FISE frequency.

ATC

134.025 - Oil Sands PAL: To be used by aircraft operating in accordance with IFR to report their arrival and to request their IFR clearances prior to departure. Aircraft operating in accordance with IFR within controlled airspace shall use the Fort McMurray PAL frequency for ATC communications for en route and Fort McMurray arrivals and departures.

Chart not to scale

ALBERTA - PIGEON COMMON FREQUENCY AREA

When requesting a flight to the Pigeon CFA, specify whether Bragg Creek or the Pigeon NDB is the initial destination as it will affect your outbound route and method of conflict resolution.

Use caution in the Pigeon CFA as there is extensive helicopter activity 6000 feet and below (Class C airspace).

From May to September, extensive helicopter activity to and from the Elbow Fire Base and Moose Mountain Lookout.

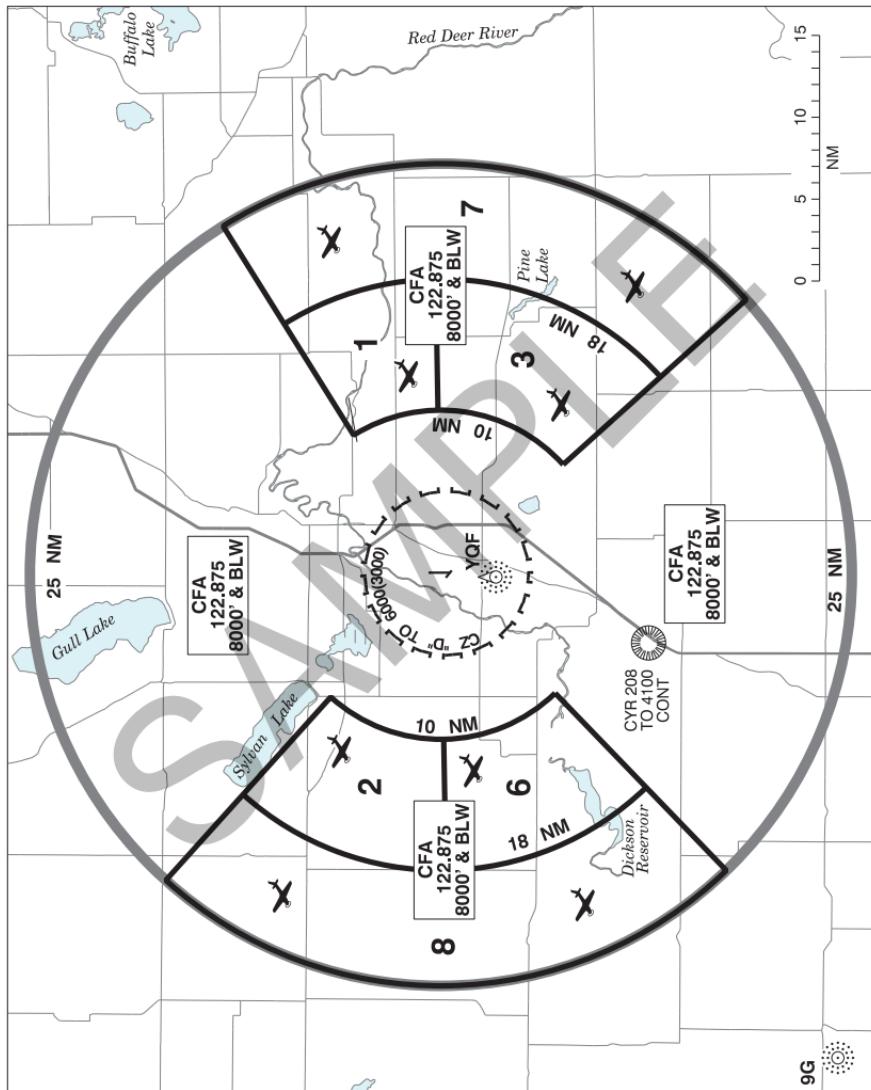

Pilots are encouraged to use the designated common frequency when operating below Class C airspace within the designated areas. Radio transmissions on a common frequency should be the minimum required to provide the aircraft's position and pilot's intentions. Example transmission:

"PIGEON AREA TRAFFIC, CESSNA GOLF ALPHA BRAVO CHARLIE FOUR MILES NORTHWEST OF PIGEON NDB, CONDUCTING FLIGHT TRAINING AT 7000 FEET AND BELOW".

Using a common frequency does not alleviate a pilot from the responsibility for monitoring and/or communicating on, when required, an ATC frequency, aerodrome traffic frequency (ATF), en-route frequency, or any other appropriate frequency.

C44 PLANNING

ALBERTA - RED DEER COMMON FREQUENCY AREA

Pilots are encouraged to use the designated common frequency within the designated areas. Radio transmissions on a common frequency should be the minimum required to provide the aircraft's position and pilot's intentions.

Example transmission:

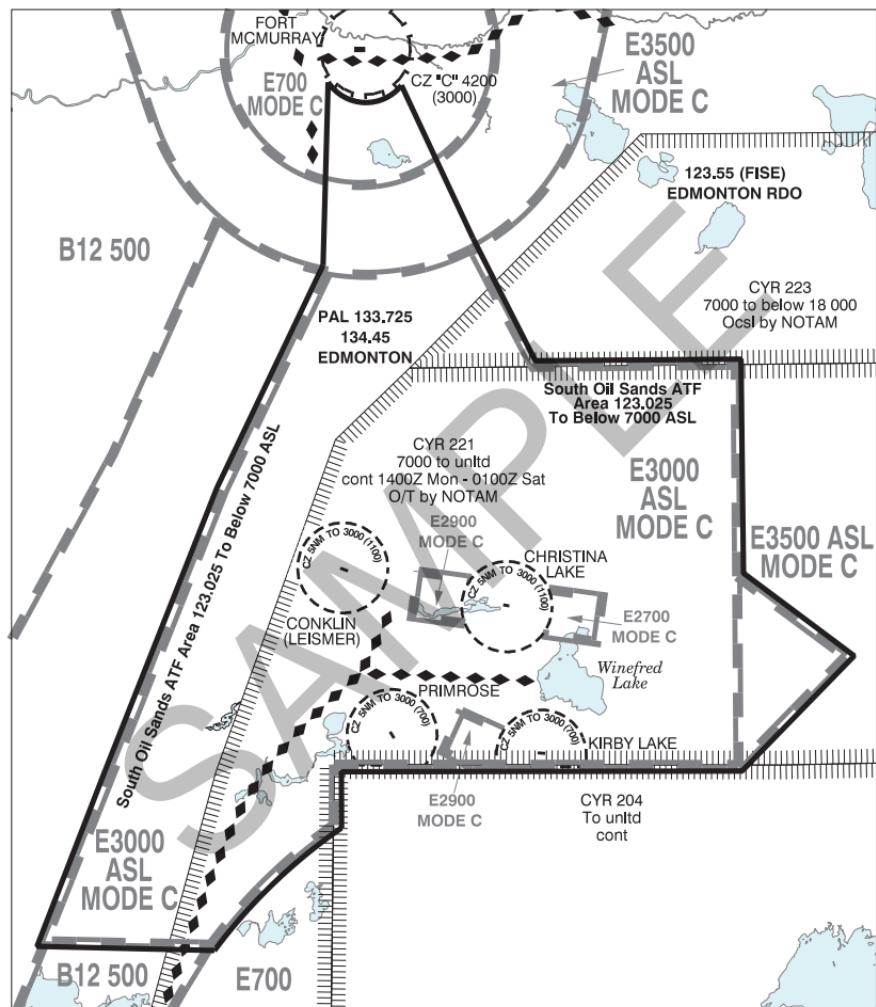

"RED DEER AREA TRAFFIC, CESSNA GOLF ALPHA BRAVO CHARLIE CONDUCTING UPPER AIR WORK WITHIN TRAINING AREA ONE BETWEEN FIVE THOUSAND AND SEVEN THOUSAND."

or

"RED DEER AREA TRAFFIC, PIPER GOLF DELTA ECHO FOXTROT, 8 MILES EAST OF RED DEER, PROCEEDING SOUTHBOUND SIX THOUSAND FIVE HUNDRED."

Using a common frequency does not alleviate a pilot from the responsibility for monitoring and/or communicating on, when required, a MF, an ATC frequency, aerodrome traffic frequency (ATF), en-route frequency, or any other appropriate frequency.

ALBERTA - SOUTH OIL SANDS ATF AREA

The following radio procedures apply to air traffic operating within the South Oil Sands area in north-eastern Alberta.

ATF Pilot-to-Pilot

123.025 - South Oil Sands Area air traffic frequency (ATF): The South Oil Sands Area ATF airspace is defined as the airspace below 7,000 ft ASL within the boundary of the Class E Mode C Control Area Extension surrounding the four affected aerodromes including a corridor to the north that extends to the Fort McMurray control zone. All pilots, prior to entering and while operating in this airspace, should broadcast their position and intentions, monitor and coordinate operations with other aircraft on the South Oil Sands ATF. For aerodrome arrivals/departures follow the Aircraft Operations - Uncontrolled Aerodromes procedures described in the RAC section of A.I.M. Canada.

Aerodrome UNICOM / ATF

122.8 - Christina Lake ATF, AUTO 122.275

122.8 - Conklin UNICOM ltd hrs, O/T ATF

123.35 - Kirby Lake UNICOM(AU) ltd hrs, O/T ATF, AUTO 122.175

122.95 - Primrose UNICOM(AU) ltd hrs, O/T ATF

C46 PLANNING

ALBERTA - SOUTH OIL SANDS ATF AREA (Cont'd)

Pilots should not conduct company-related communications on the South Oil Sands Area ATF.

FISE

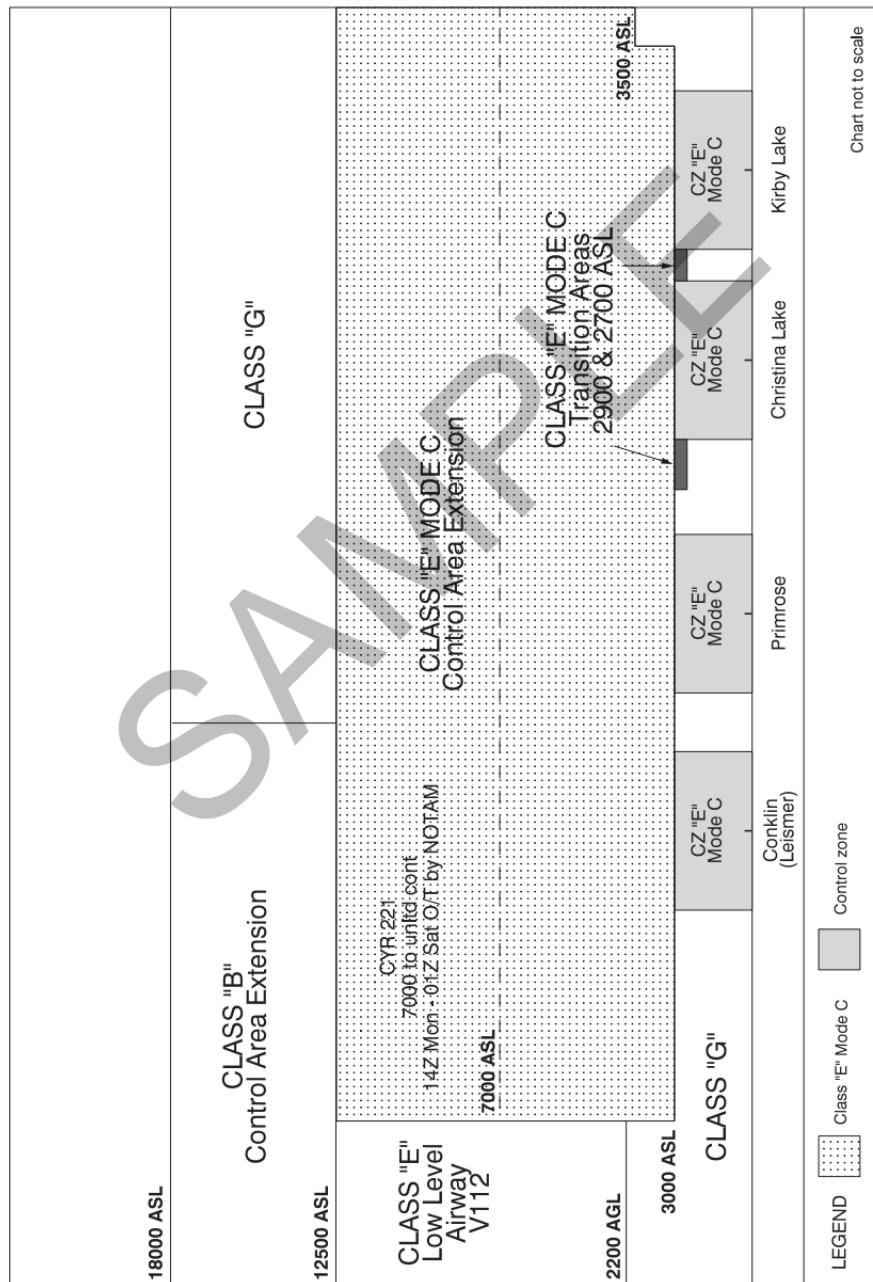

123.55 - Fort McMurray RCO: Pilots operating in the vicinity of Fort McMurray requiring enroute flight information service should contact the Edmonton FIC (call sign Edmonton radio) on this FISE frequency.

ATC

133.725 - Conklin PAL and 134.45 - South Oil Sands PAL: To be used by pilots operating in accordance with IFR in controlled airspace to report arrivals and to request their IFR clearances prior to departure.

SAMPLE

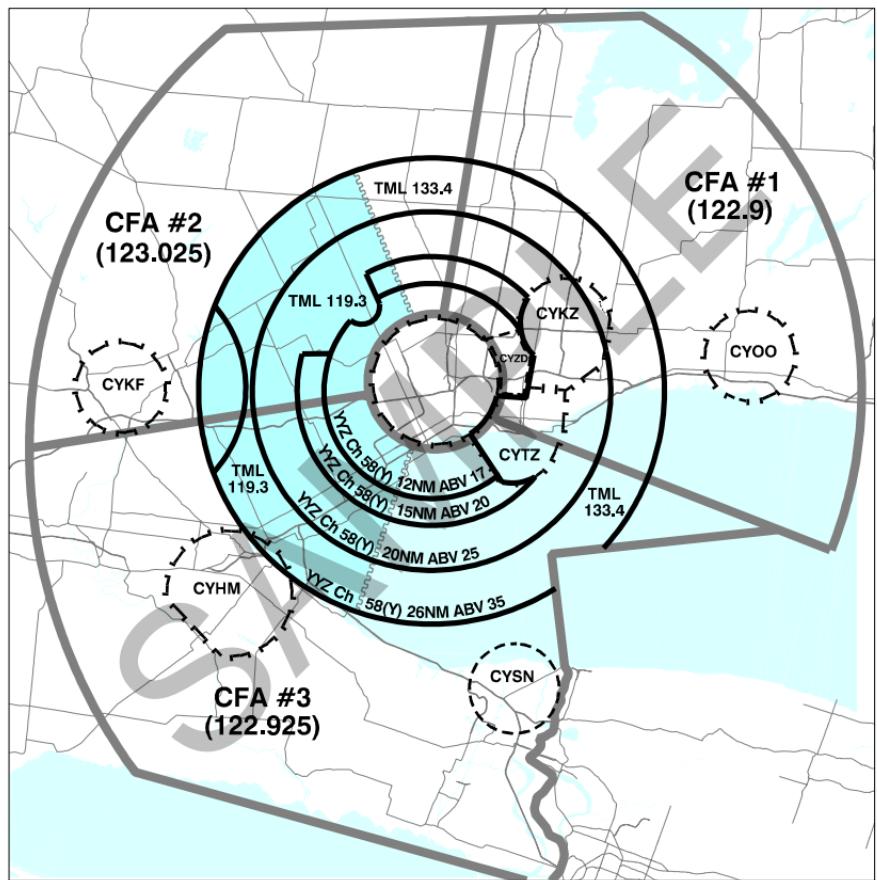

ALBERTA - SOUTH OIL SANDS ATF AREA (Cont'd)

C48 PLANNING

ONTARIO – TORONTO COMMON FREQUENCY AREAS AND VFR TRANSIT ROUTES

TORONTO COMMON FREQUENCY AREA (CFA)

GUIDELINES FOR USING TORONTO COMMON FREQUENCY AREAS (CFA) FREQUENCIES

Pilots are encouraged to use the appropriate CFA frequency when flying in the Toronto CFAs.

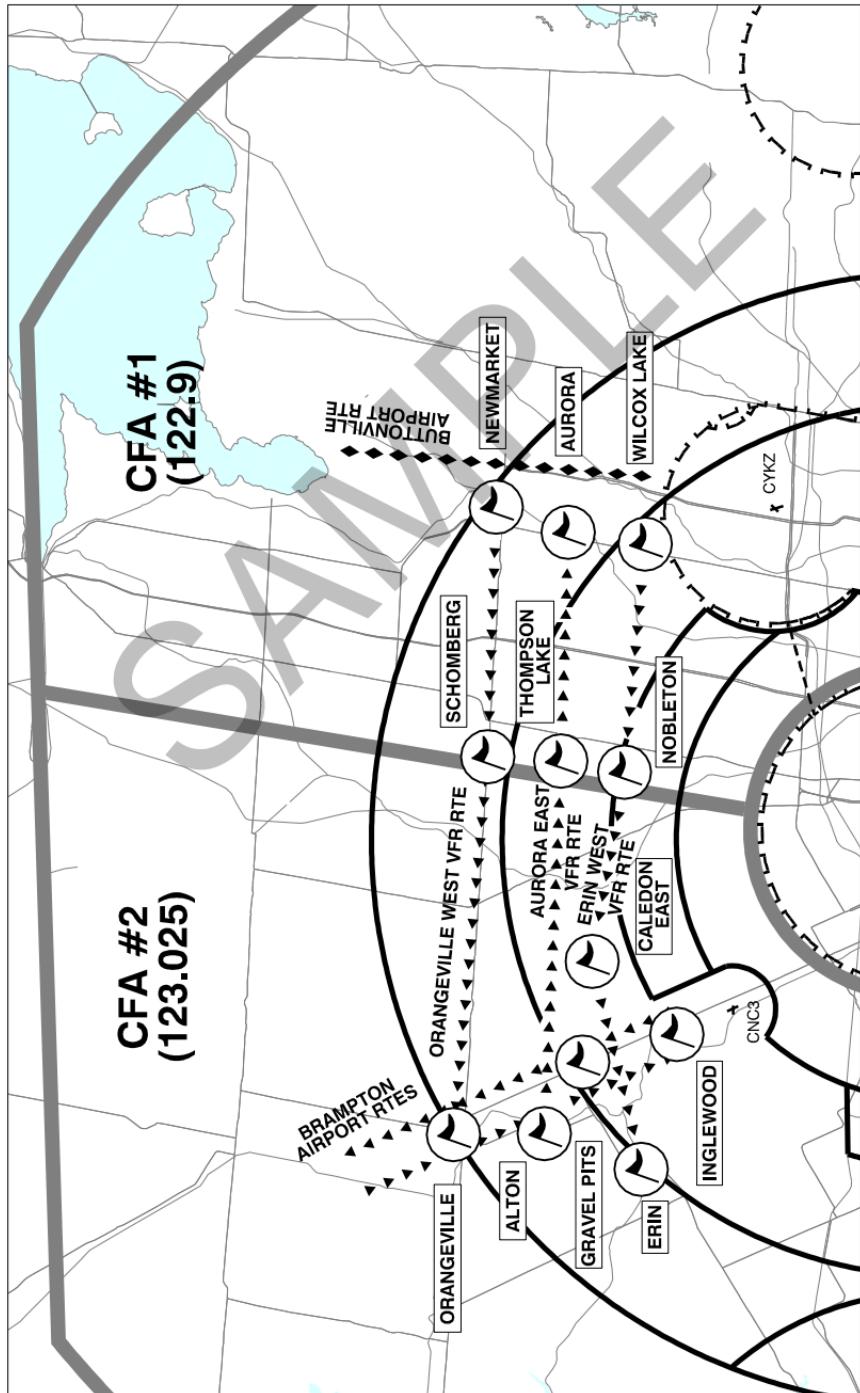

Transmissions on a CFA frequency should be limited to the minimum required to provide the aircraft's position and pilot intentions. Example transmission:

(On CFA#2 123.025) "TRAFFIC IN THE LUTHER LAKE AREA CESSNA GOLF ALPHA BRAVO CHARLIE CONDUCTING AIRWORK TWO MILES EAST OF LUTHER LAKE THREE THOUSAND FEET AND BELOW"

Flying within a CFA and using a CFA frequency does not alleviate a pilot from the responsibility for monitoring and/or communicating on, when required, an ATC frequency, aerodrome ATF or any other appropriate frequency.

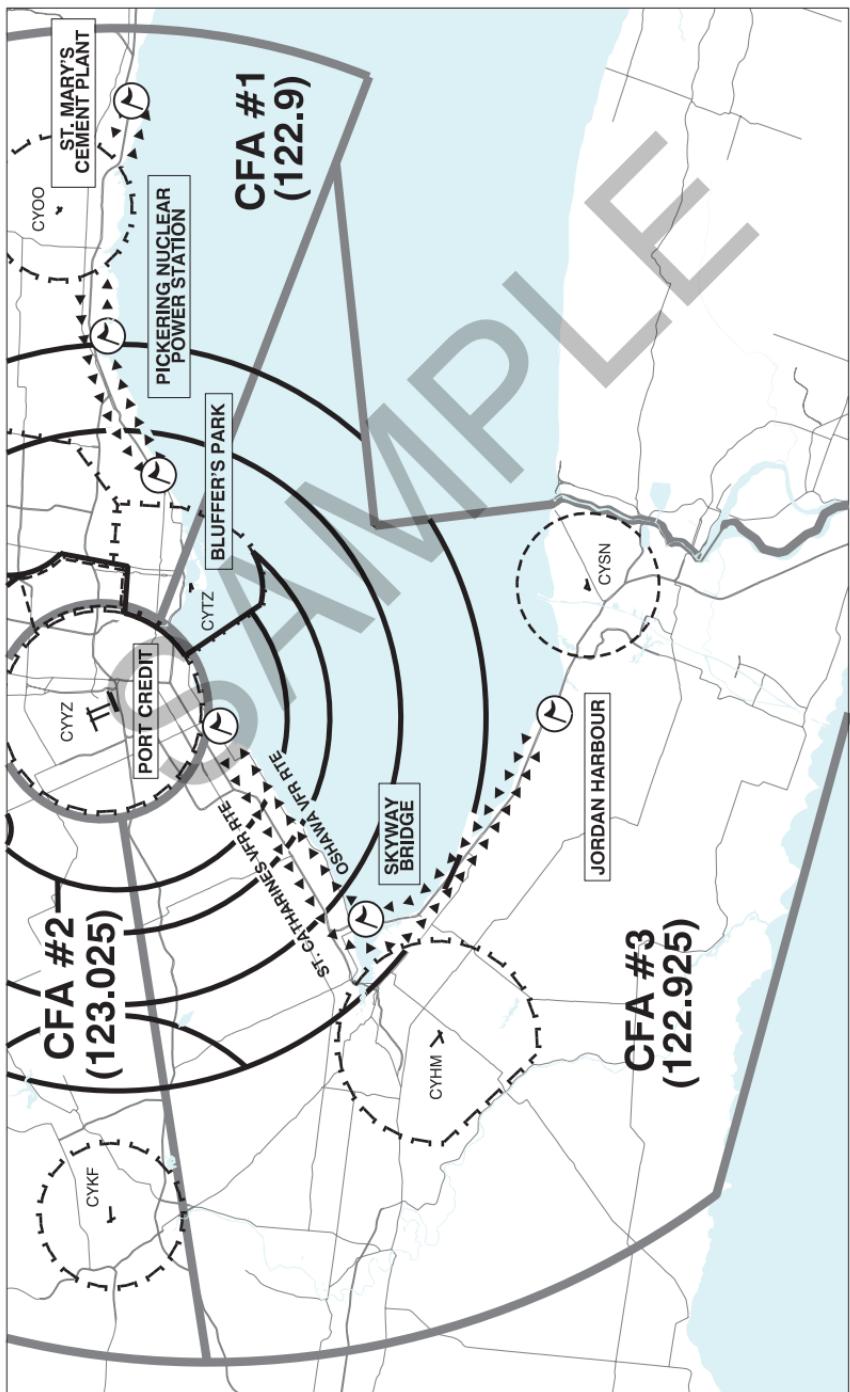

ONTARIO – TORONTO COMMON FREQUENCY AREAS AND VFR TRANSIT ROUTES (Cont'd)

TORONTO NORTH VFR TRANSIT ROUTES

ONTARIO – TORONTO COMMON FREQUENCY AREAS AND VFR TRANSIT ROUTES (Cont'd)

TORONTO LAKESHORE VFR TRANSIT ROUTES

ONTARIO – TORONTO COMMON FREQUENCY AREAS AND VFR TRANSIT ROUTES (Cont'd)**GUIDELINES FOR USING TORONTO VFR TRANSIT ROUTES**

When transiting the Toronto area pilots are encouraged to use the designated VFR transit routes.

There are five routes; three for transiting north of Toronto Intl and two for transiting along the Lakeshore as follows:

North Transit Routes

ORANGEVILLE WEST (NEWMARKET - SCHOMBERG - ORANGEVILLE)

AURORA EAST (ALTON - THOMPSON LAKE - AURORA)

ERIN WEST (WILCOX LAKE - NOBLETON - CALEDON EAST - ERIN)

Lakeshore Transit Routes

OSHAWA (JORDAN HARBOUR - SKYWAY BRIDGE - PORT CREDIT - BLUFFER'S PARK - PICKERING NUCLEAR POWER STATION - ST. MARY'S CEMENT PLANT)

ST. CATHARINES (ST. MARY'S CEMENT PLANT - PICKERING NUCLEAR POWER STATION - BLUFFER'S PARK - PORT CREDIT - SKYWAY BRIDGE - JORDAN HARBOUR)

Use the appropriate CFA frequency when using the VFR routes. An ATC clearance is required if the VFR transit routes are flown within the Toronto TCA Class C airspace or through the Toronto Intl, Toronto/Billy Bishop Toronto City Airport and Oshawa control zones. Following are example transmissions when flying a route:

(On CFA #2 123.025) "TRAFFIC IN THE ALTON AREA CESSNA GOLF ALPHA BRAVO CHARLIE OVER ALTON TWO THOUSAND FIVE HUNDRED ON VFR ROUTE AURORA EAST"

(On CFA #1 122.9) "TRAFFIC IN THE THOMPSON LAKE AREA CESSNA GOLF ALPHA BRAVO CHARLIE OVER THOMPSON LAKE TWO THOUSAND FIVE HUNDRED ON VFR ROUTE AURORA EAST"

(On CFA #1 122.9) "TRAFFIC IN THE AURORA AREA CESSNA GOLF ALPHA BRAVO CHARLIE OVER AURORA TWO THOUSAND FIVE HUNDRED CLIMBING TO THREE THOUSAND FIVE HUNDRED HEADING NORTHEAST TO PETERBOROUGH"

C52 PLANNING

QUEBEC – ATF CORRIDOR SEPT-ÎLES TO LOURDES-DE-BLANC-SABLON

The ATF corridor (frequency 123.5) extends from the surface to 12,500 ASL inclusively, outside Havre St-Pierre, Natashquan and Lourdes-de-Blanc-Sablon MF zones (15NM radius, 3000' AAE).

Delimitation:

The area outside controlled airspace bordered, in part, by Sept-Îles CZ and an arc located at 15NM centred on airport and included between R132 and R090 from YZV VOR/DME. Then northerly by a tangent from a point located on R090 from YZV VOR/DME at 15NM from Sept-Îles airport and linking the arcs of circles of 15NM centred on Havre St-Pierre, Natashquan, Chevery, St-Augustin and Lourdes-de-Blanc-Sablon airports, including an area formed by a line from the point of contact of the 15NM arc of Natashquan airport to YIF NDB and the northern limit already described and excluding CYA733(M), then southerly by a tangent from BX NDB and linking the arcs of 15NM centred on Chevery and Natashquan airports then along a line from a point of contact of the MF zone toward the PN NDB then clockwise to a point located on R132 from YZV VOR/DME at 15NM from Sept-Îles airport.

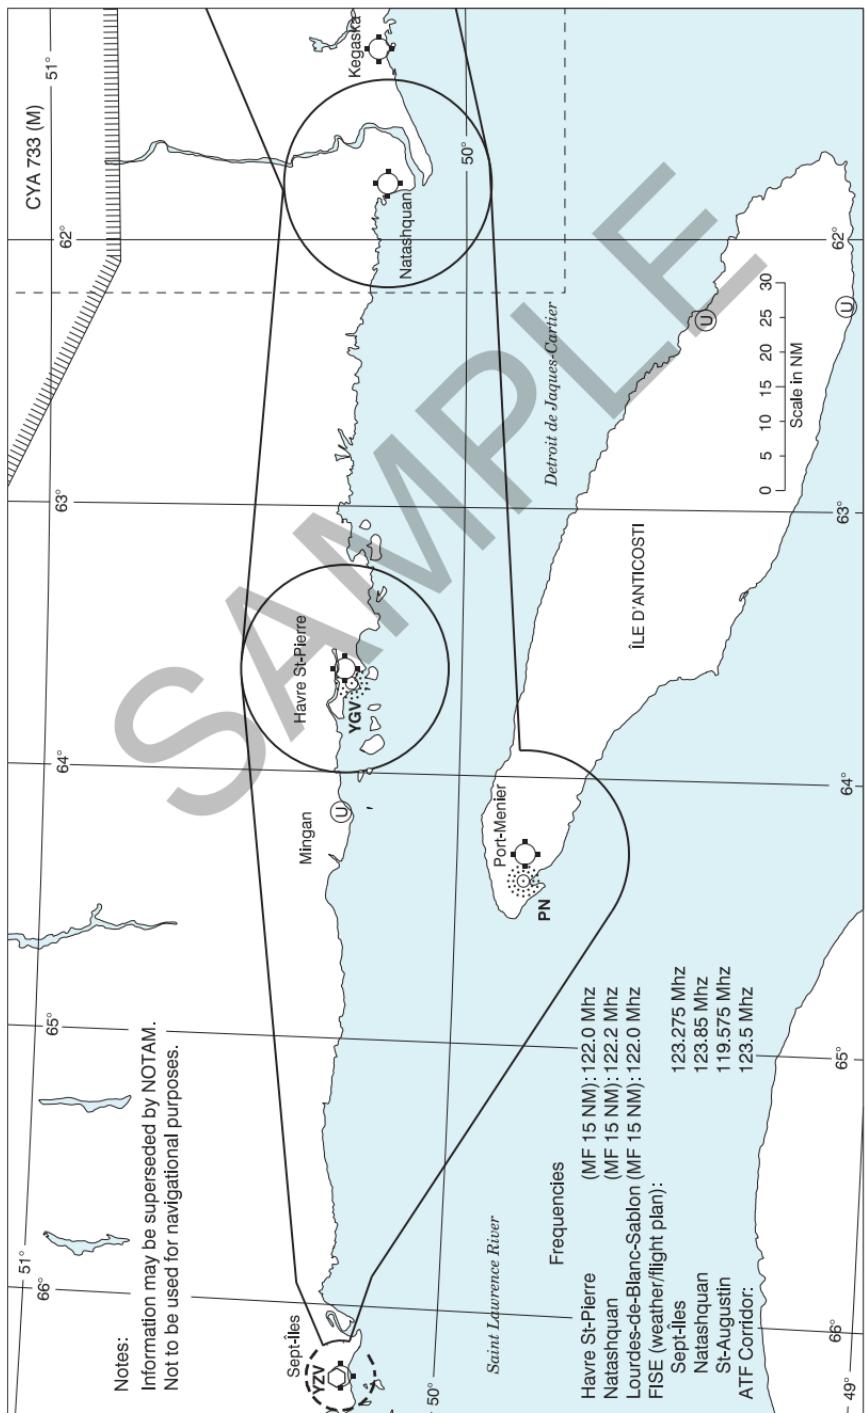

Exceptions:

The corridor extends to but not including 7000 ASL within a radius of 15NM centred on Lourdes-de-Blanc-Sablon airport as well as in the sector formed by a tangent linking the 15NM arcs of Lourdes-de-Blanc-Sablon and St-Augustin airports and the tangent from a 15NM arc of St-Augustin airport to BX NDB, excluding Lourdes-de-Blanc-Sablon MF zone.

Procedures:

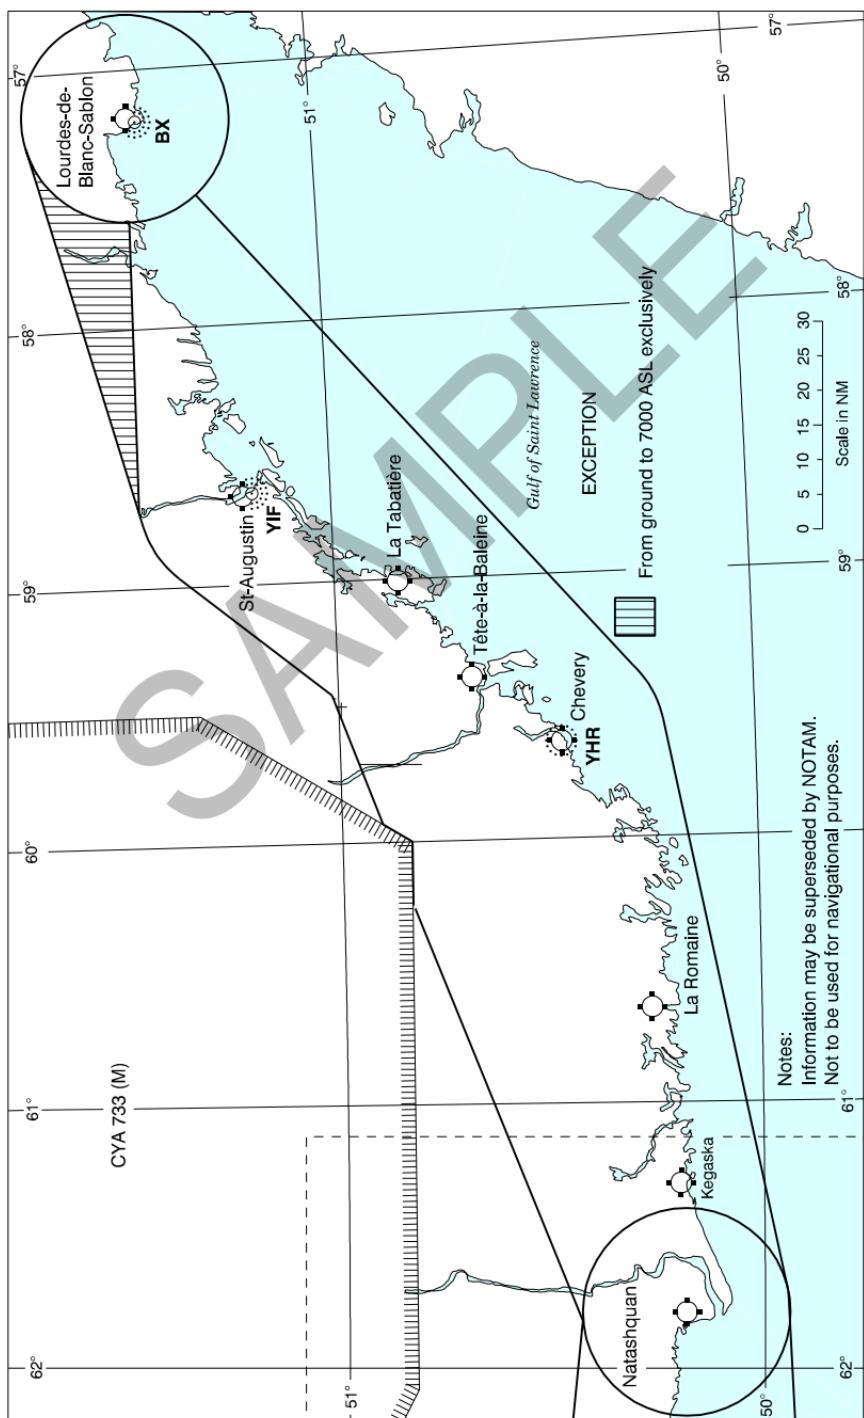

Pilots are reminded to follow the ATF procedures described in TC AIM RAC.

C56 PLANNING

NEWFOUNDLAND & LABRADOR ATF CORRIDOR NAIN TO MARY'S HARBOUR

The ATF corridor (frequency 122.8) extends from the surface to 12,500 ASL inclusively and exists wholly in uncontrolled airspace.

Delimitation:

The corridor begins at a point on the arc 15 NM distant, to the north, from the Nain aerodrome and then along the arc in a clockwise direction and to the points linking the arcs of 15 NM centered on the aerodromes at Makkovik, Black Tickle, St. Lewis and Mary's Harbour and Port Hope Simpson then thence to N53°24' W057°56' (at the extent of the 87 NM Goose Bay MTCA), thence along the arc of the 87 NM Goose Bay MTCA to include the annex to the Goose Bay MTCA in the vicinity of Rigolet, thence to N54°47' W060°10' (at the extent of the 87 NM Goose Bay MTCA), thence to points linking the arcs of 15 NM centered on the aerodromes at Natuashish, Voisey's Bay and Nain to the start point.

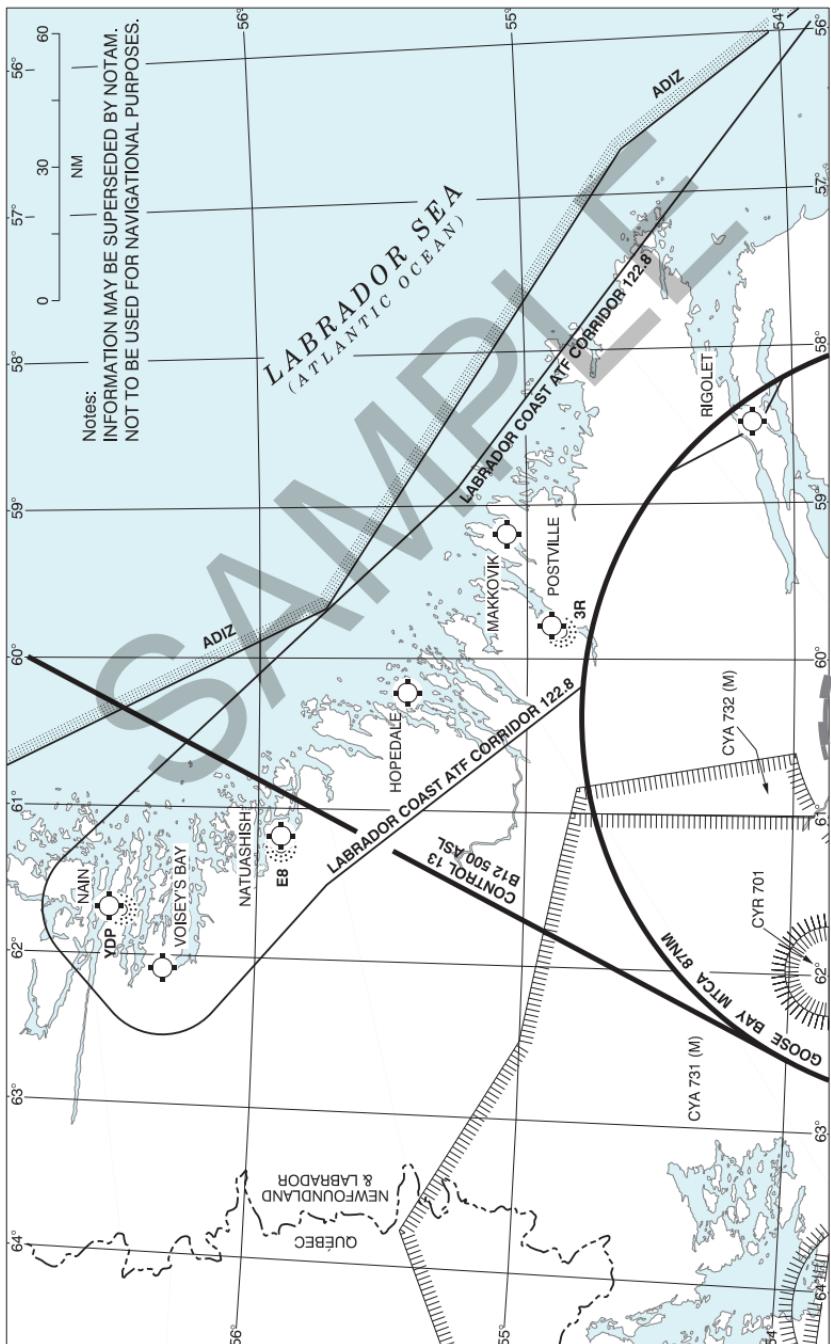

Procedures:

Pilots are reminded to follow the ATF procedures described in TC AIM RAC, published by Transport Canada.

Maps on following two pages.

ATF CORRIDOR NAIN TO MARY'S HARBOUR (Cont'd)

NEWFOUNDLAND & LABRADOR

ATF CORRIDOR NAIN TO MARY'S HARBOUR (Cont'd)

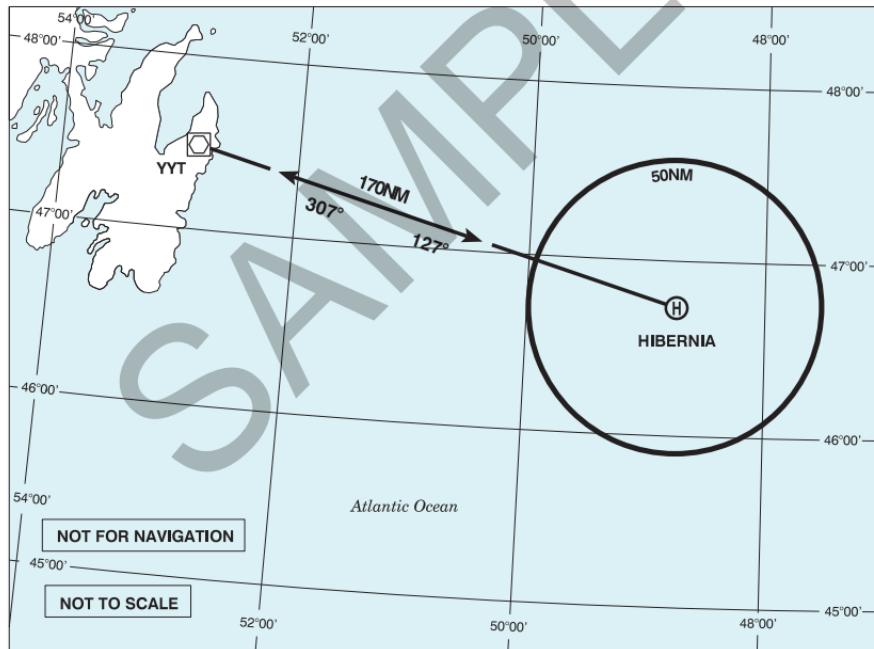

NEWFOUNDLAND & LABRADOR**OFFSHORE AIR TRAFFIC ACTIVITY AREA EAST OF ST. JOHN'S NL, FL55 AND BELOW**

Petroleum exploration and production off the east coast of Newfoundland has created significant air traffic activity. The Hibernia oil production structure is fixed at position N46 45.0 W48 46.7. Other structures with helidecks operate within a 50NM radius of the Hibernia structure. The number and location may vary seasonally.

The majority of the traffic consists of helicopters operating to/from these platforms along direct routes to St. John's airport, however, military and civil fixed wing patrol aircraft also frequently operate in the area and across these routes.

Pilots operating in the area are advised to monitor enroute frequency 126.7MHz and to broadcast their position and intentions.

Clearances at and above FL55 can be obtained by contacting Gander Area Control Centre on 118.25 MHz, via a telecommunications circuit on the Hibernia platform.

BRITISH COLUMBIA – NOISE ABATEMENT PROCEDURES - GULF ISLANDS

The Gulf Islands, located in Georgia Strait, have been identified as home to several unique and endangered wildlife species and in this regard Transport Canada has been working with the Islands Trust, the Department of Fisheries and Oceans Canada as well as the British Columbia Ministry of Environment to establish procedures to aid in wildlife protection. These species include several types of birds as well as sea mammals including the Orca whale. The rapidly growing interest in wildlife has caused concern due to encroachment into endangered bird and animal habitat by both surface and air traffic. Therefore pilots are encouraged to avoid low level flight over bird nesting areas marked on the VFR charts and to avoid, where possible, low flight over any area where bird or sea life activity may be encountered. These islands are also a popular tourist destination and attract many visitors each year in addition to being home to a number of full-time residents. The environment surrounding the Gulf Islands is quiet. As a result, aircraft operating at legal altitudes are often audible and such extraneous noise can be annoying to some residents and disruptive to wildlife.

As a result pilots are requested to follow the guidelines listed below:

1. Aviation safety is foremost. Pilots are responsible for the safe operation on their aircraft and compliance with all aviation regulations. Nothing in this information sheet relieves the pilot-in-command of the aircraft from this responsibility.
2. Pilots not in the process of taking-off or landing should attempt to, where possible, avoid flying in the vicinity of, any marked or designated wildlife sanctuary, any site where bird nesting is known to be located or any residential building or area. If flying in the vicinity of one of these locations pilots should attempt to do so at no less than 2000 ASL (or 1000 AGL where terrain is higher than 1000).
3. All Gulf Islands are to be considered noise sensitive. Pilots are requested to give particular consideration to the following islands: Denman, Gabriola, Thetis, Lasqueti, Galiano, Hornby, Mayne, North and South Pender, Salt Spring and Saturna.

4. Pilots are asked to operate their aircraft in the most community friendly manner possible.
5. Pilots are asked to refrain from training or practicing manoeuvres over the Gulf Islands.
6. Landing and take-off of aircraft in Gulf Islands National Park Reserve is prohibited unless authorized through the issuance of a landing permit by the Parks Canada Agency.

Any questions or comments may be sent to the Regional Director Civil Aviation (Pacific).

CHANGE IN NOTAM PROCEDURE REGARDING LOGGING ACTIVITIES PACIFIC REGION

NOTAMs will not be filed regarding blasting related to logging activities under the following circumstances:

- If utilizing instantaneous blasting equipment, (blasters will ensure the area is clear of all air traffic prior to the blast).
- If utilizing a standard 6 min fuse and utilizing aeronautical freq radio (blaster will make two transmissions on 123.2 MHz advising of the imminent blast. These transmissions will be at approximately 4 min and 1 min prior to the estimated blast. These transmissions will include the geographical location referenced to prominent landmark and the time to the blast).

Notwithstanding the above two calls, if a blaster detects an aircraft in the immediate vicinity of a blast they will direct a radio transmission to that aircraft using aircraft type and colour (i.e. red and white helicopter, you are over an active blast site clear the area immediately). Blasters may elect to utilize both methods for added safety.

When operating VFR over forested areas of BC, pilots should:

- Be aware of new logging road construction, new area of construction at beach level (area used for log sorting and rock drilling equipment, if no dust or activity in the vicinity then a blast could be imminent).
- In areas of active road construction or logging arrange flight to be at least 1000' AGL.
- If operating below 1000' AGL monitor 123.2 MHz for imminent blasting notification.
- Upon hearing a warning transmission regarding an imminent blast determine their location in reference to the blast site and if necessary either climb to at least 1000' AGL or deviate from the blast area.
- If unable to comply with the above recommendations contact the blast site and advise them of the aircraft's location and intentions.
- Relay information on active blast sites to other pilots in the area.

Notwithstanding the above recommendations, a NOTAM will be required if the blast site is within 5NM of an aerodrome or if the blaster elects not to utilize either of the above procedures. In any case, the NOTAM will have a maximum duration period of 14 days.

Any questions or comments may be directed to Transport Canada Aerodromes and Air Navigation Branch (Pacific Region) (604) 666-5490.

BRITISH COLUMBIA – CONSERVATION

Due to the confined manoeuvring area and concentration of small boats the body of water listed below is to be avoided except in emergency.

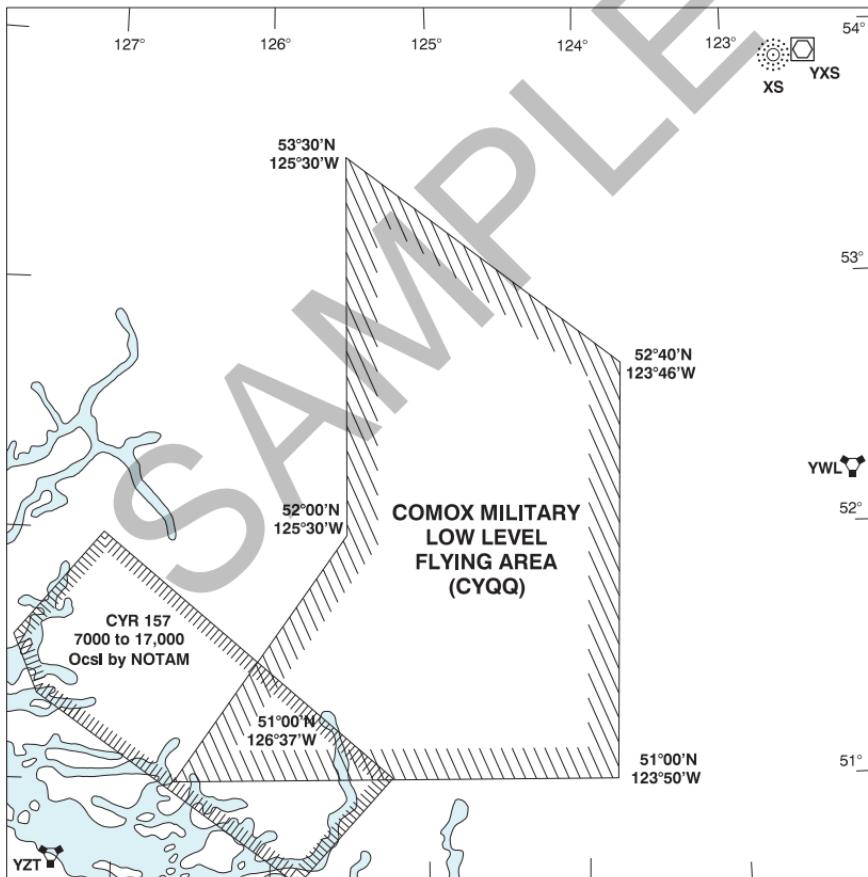

Body of Water	Coordinates		Community Served	Relative Location
	Lat	Long		

BRITISH COLUMBIA – HAZARDS TO AIRCRAFT OPERATIONS

COMOX MILITARY LOW LEVEL FLYING AREA

1. The area consists of that airspace from the surface of the earth up to but not including 18,000 feet ASL and encompasses the following area. From N53 30 W125 30 to N52 40 W123 46 to N51 00 W123 50 to N51 00 W126 37 to N52 00 W125 30 to origin.
 2. The area depicted contains military flying activity from the surface to below 18,000 feet ASL. Military aircraft conduct low level high speed exercises in the area under visual flight rules. Details of active periods are advertised by NOTAM or may be obtained by contacting Comox Tower if enroute.

COMOX MILITARY LOW LEVEL FLYING AREA

BRITISH COLUMBIA – SIGNIFICANT OBSTRUCTIONS

The following known obstructions 300' or higher, and significant obstructions less than 300' for a VNC Chart will be published on the next applicable chart revision. The cardinal direction in True North and nautical mile distance shown is from the nearest aerodrome on the VNC. See General Section - Cross Reference of Aerodrome Indicator and Name.

GENERAL AREA

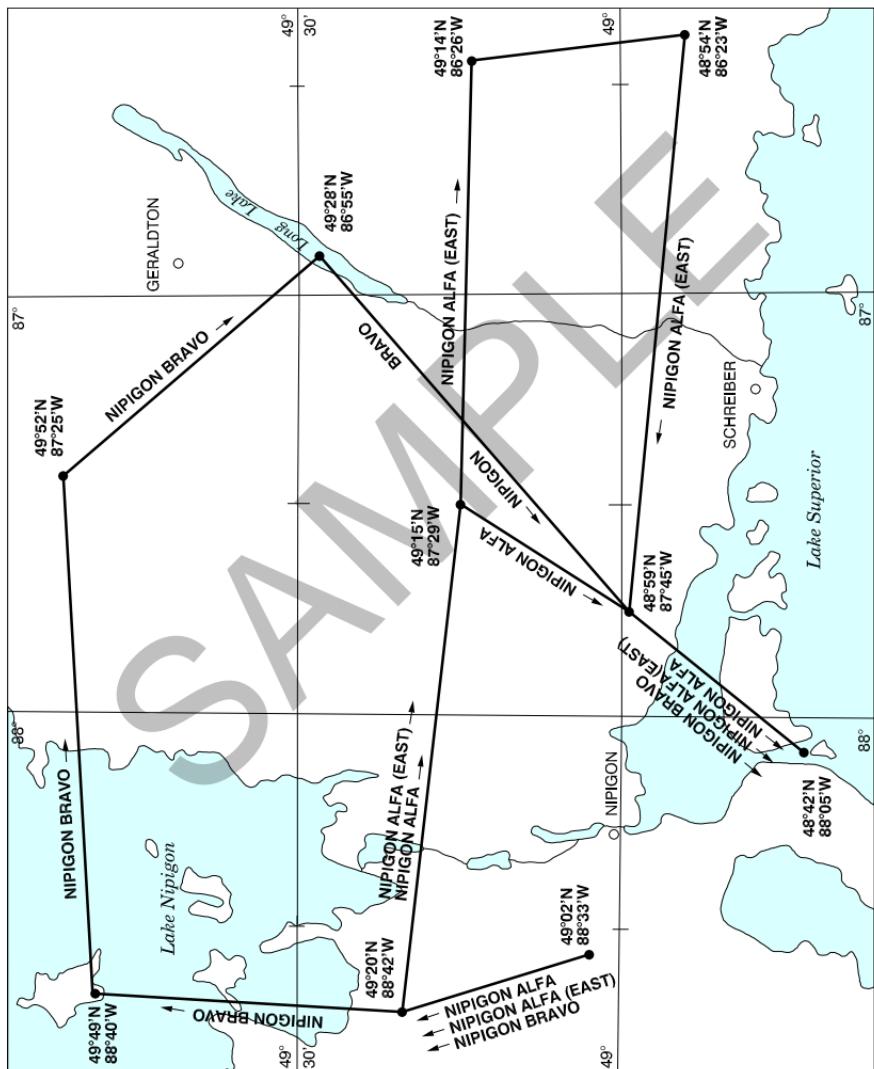

SITE

COORDINATES

C80 PLANNING

ONTARIO – HAZARDS TO AIRCRAFT OPERATIONS (Cont'd)**NIPIGON TRAINING AREA**

Aircraft will follow routes as shown on chart, remain within 5NM of centreline and maintain VFR conditions. Altitudes will vary between 100 AGL and 9,500 ASL.

ONTARIO – HAZARDS TO AIRCRAFT OPERATIONS (Cont'd)**ALGONQUIN LOW LEVEL TACTICAL AIR TRANSPORT EXERCISES (TATEX)**

The area identified as the ALGONQUIN TATEX area and depicted on the following map, contains military training activity from surface to 6,000 feet ASL. The TATEX area is located within the area bounded by a line drawn from N44 44 W78 03, to N44 58 W78 10, to N45 20 W78 30, to N45 30 W78 30, to N47 00 W78 30, to N47 00 W77 40, to N46 54 W77 30, to N46 30 W77 30, to N46 12 W77 44, to N46 04 W77 24, a point on the boundary of CYR510, thence counter-clockwise via the boundary of CYR510 to the boundary of CYR511, thence counter-clockwise via the boundary of CYR511 to N45 50.5 W77 32.3, to N45 47.5 W77 44, to N45 35 W77 44, to N45 18 W76 55, to N45 07 W77 00, to N44 57 W77 28 to the point of beginning.

Military transport aircraft conduct low level formation flights in this area under visual and instrument meteorological conditions, both day and night. During VFR weather conditions formations may depart the area and continue to operate low level.

The ALGONQUIN TATEX area will be active SFC TO 6000 FT MSL 1300-0500Z‡ DLY. Periods of activation outside these times will be completed by NOTAM under the heading TORONTO FIR with as little as 24 hours advance notice.

C88 PLANNING

ONTARIO – HAZARDS TO AIRCRAFT OPERATIONS (Cont'd)**Military Training Route (MTR) 605 - Hi-Low Transition Route - Visual Airdrop**

The area identified as MTR 605 contains military training activity from 500 feet AGL to 13,000 feet ASL, within 2 NM of the centreline in IFR or VFR conditions. This route shall only be planned with weather that will permit a visual drop. Descent commences between MTR4 and HL5 to minimum altitudes (500'/1000' AGL) for subsequent legs. If continuing VMC is anticipated, IFR may be cancelled and the drop conducted visually. Activation of this route will be advertised on CYTR ATIS frequency 135.45 or 257.7 MHz.

Routing - HL1, HL2, HL3, HL4, MTR4, HL5, IPTE, DZT, DZT

HL1	N43 51.00	W078 00.00	Waypoint
HL2	N43 48.00	W078 00.00	Waypoint

MARETH 1, 2 AND 3 LOW LEVEL TRANSIT ROUTES (LLTRs)

The areas identified as the MARETH 1, 2 and 3 are LLTRs one km wide on either side of the centre line as depicted on the following maps. These LLTRs contain Military helicopter operations in single aircraft or in formation from the surface to 1000 AGL, both by day or night, in VFR or marginal VFR weather conditions and are active at all times. Non-participating pilots are urged to exercise caution in the vicinity of these routes.

C96 PLANNING

MARETH 1

The area identified as the MARETH 1 Route, surface to 1000 AGL, is used as a transition zone between CYWA and CYDH. The Route is between 45°57.08'N 77°19.09'W (CYWA), thence over the Ottawa River to 45°50.0'N 76°54.25'W (Hen Island), direct to 45°49.09'N 76°45.55'W (South tip of "Île à Bertrand"), thence over the Ottawa river to 45°26.15'N 76°19.04'W (middle of Goodwin Bay) then to 45°07.50'N 75°56.54'W (CYDH).

MARETH 2

The area identified as the MARETH 2 Route, surface to 1000 AGL, is used as a transition zone between CYWA and CYOW. The Route is between 45°57.08'N 77°19.09'W (CYWA), thence over the Ottawa River to 45°50.0'N 76°54.25'W (Hen Island), direct to 45°49.09'N 76°45.55'W (South tip of "Île à Bertrand"), thence over the Ottawa river to 45°21.17'N 75°49.10'W (Britannia Bay), direct to 45°18.03'N 75°47.28'W (bend in Hwy 416), then direct to 45°19.21'N 75°40.09'W (CYOW).

MARETH 3

The area identified as the MARETH 3 Route, surface to 1000 AGL, is used as a transition zone between CYDH and CYOW. The Route is between 45°07.50'N 75°56.54'W (CYDH) direct to 45°19.21'N 75°40.09'W (CYOW).

ONTARIO – SIGNIFICANT OBSTRUCTIONS

The following known obstructions 300' or higher, and significant obstructions less than 300' for a VNC Chart will be published on the next applicable chart revision. The cardinal direction in True North and nautical mile distance shown is from the nearest aerodrome on the VNC. See General Section - Cross Reference of Aerodrome Indicator and Name.

MARITIME PROVINCES**MARITIME PROVINCES - AIR NAVIGATION RADIO AIDS**

Bluenose (Halifax/Stanfield Intl) NDB ident "ZNS" at N44 58 00 W63 25 37 has been decommissioned.
Split Crow (Halifax/Stanfield Intl) NDB ident "ZH2" freq 364 at N44 48 08 W63 35 23 has been
decommissioned.

MARITIME PROVINCES - AIRSPACE DESIGNATIONS**MARITIME PROVINCES - DANGER, RESTRICTED & ADVISORY AREAS**

All altitudes will be inclusive unless otherwise indicated, i.e. (5000' to 10,000'). To indicate when either the bottom or upper altitude is not included, the words below and above are to be placed before the appropriate altitude, i.e. (above 5000' to 10,000') or (5000' to below 10,000').

Any NOTAM regarding Canadian Danger, Restricted or Advisory Areas are issued under the appropriate NOTAM series, in accordance with their dissemination category. Refer to AIP Canada (ICAO) GEN 3.1.3.4.

MARITIME PROVINCES - BLASTING OPERATIONS

The following is a list of locations where road construction, open-pit mine or quarry blasting operations are conducted.

GENERAL AREA

SITE

COORDINATES

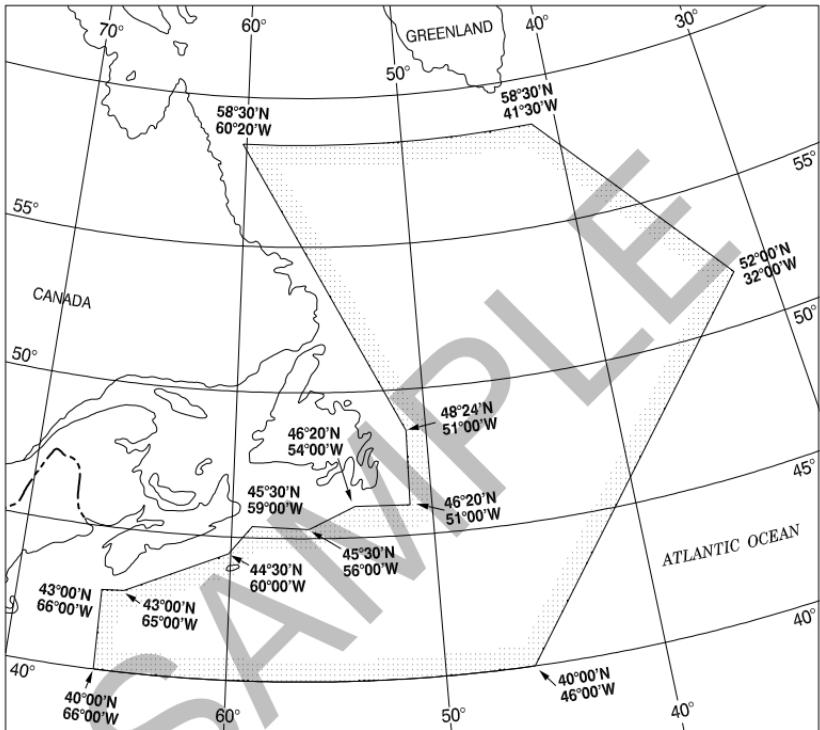

MARITIME PROVINCES - HAZARDS TO AIRCRAFT OPERATIONS**MILITARY OPERATIONS AREA - North Atlantic Operations Patrol Area ELK**

1. ELK consists of that airspace from the surface of the earth to Flight Level 50 within the following area: From N43 00 W66 00 to N43 00 W65 00 to N44 30 W60 00 to N45 30 W59 00 to N45 30 W56 00 to N46 20 W54 00 to N46 20 W51 00 to N48 24 W51 00 to N58 30 W60 20 to N58 30 W41 30 to N52 00 W32 00 to N40 00 W46 00 to N40 00 W66 00 to the point of origin.
2. Maritime surveillance aircraft conduct daily all-weather operational flights in Area ELK. These aircraft are required to operate on various headings and altitudes up to and including FL50 and to make rapid climbs and descents without prior warning. Because of operational considerations they operate without navigation or identification lights during the hours of darkness and often without SIF/IFF.
3. The Regional Joint Operations Centre (Atlantic) RJOC (Atlantic) Maritime Air Flight following (MAFF) provides advisory information between maritime aircraft and other aircraft in Area ELK based on known air traffic.
4. Standard pressure setting 29.92 inches is used for transit and separation within the entire area.
5. In the interest of Flight Safety it is essential that RJOC (Atlantic) be informed in advance of all flights or proposed flights in or through Area ELK. Aircraft flight level(s), track and approximate times of ELK penetration and exit are required. Military aircraft are encouraged to communicate directly with RJOC (Atlantic). On prior request, frequencies will be assigned on which to report position and obtain ELK clearance. ASW aircraft will be routed clear of all known military and civil traffic.
6. RJOC (Atlantic) may be contacted by the following means;
 - (a) Letter to Commander MARLANT, Halifax, NS, Canada.
 - (b) Message to RJOC ATLANTIC//MAFF//.
 - (c) Telephone RJOC (Atlantic) MAFF (902)427-2502, (902)427-2501 CSN 447-2502
 - (d) Email RJOCA.MAFF@FORCES.GC.CA
 - (e) On request of the pilot when filing flight plans at departure points in North America, aircraft flight plans may be relayed through ATC channels to Moncton ACC for RJOC (Atlantic).
 - (f) In-flight position reports or advisories when not transmitted directly as in para 5 above may be relayed through Gander or Moncton ACC. These messages should specify "Pass to RJOC (Atlantic)".

C108 PLANNING

MARITIME PROVINCES - HAZARDS TO AIRCRAFT OPERATIONS (Cont'd)

AREA ELK FL 50 AND BELOW

MILITARY OPERATIONS AREA (MOA)

Shearwater DIP Sectors

1. The Shearwater DIP Sectors consists of that airspace from the surface of the earth to 500 ASL within the following area:

From N44 38 15.05 W63 08 47.56 (UAW 090T°/015 DME) to N44 38 09.27 W62 47 47.18 (UAW 090T°/030 DME) arcing clockwise (on a 30NM arc from UAW) to N44 23 11.26 W64 06 01.84 (UAW 240T°/030 DME) to N44 30 45.56 W63 47 57.24 (UAW 240T°/015 DME) arcing counter-clockwise (on a 15NM arc from UAW) to point of origin.

This area is further divided into four sectors, based on that space between the UAW 15 DME arc and the UAW 30 DME arc, and between the following (UAW) radials:

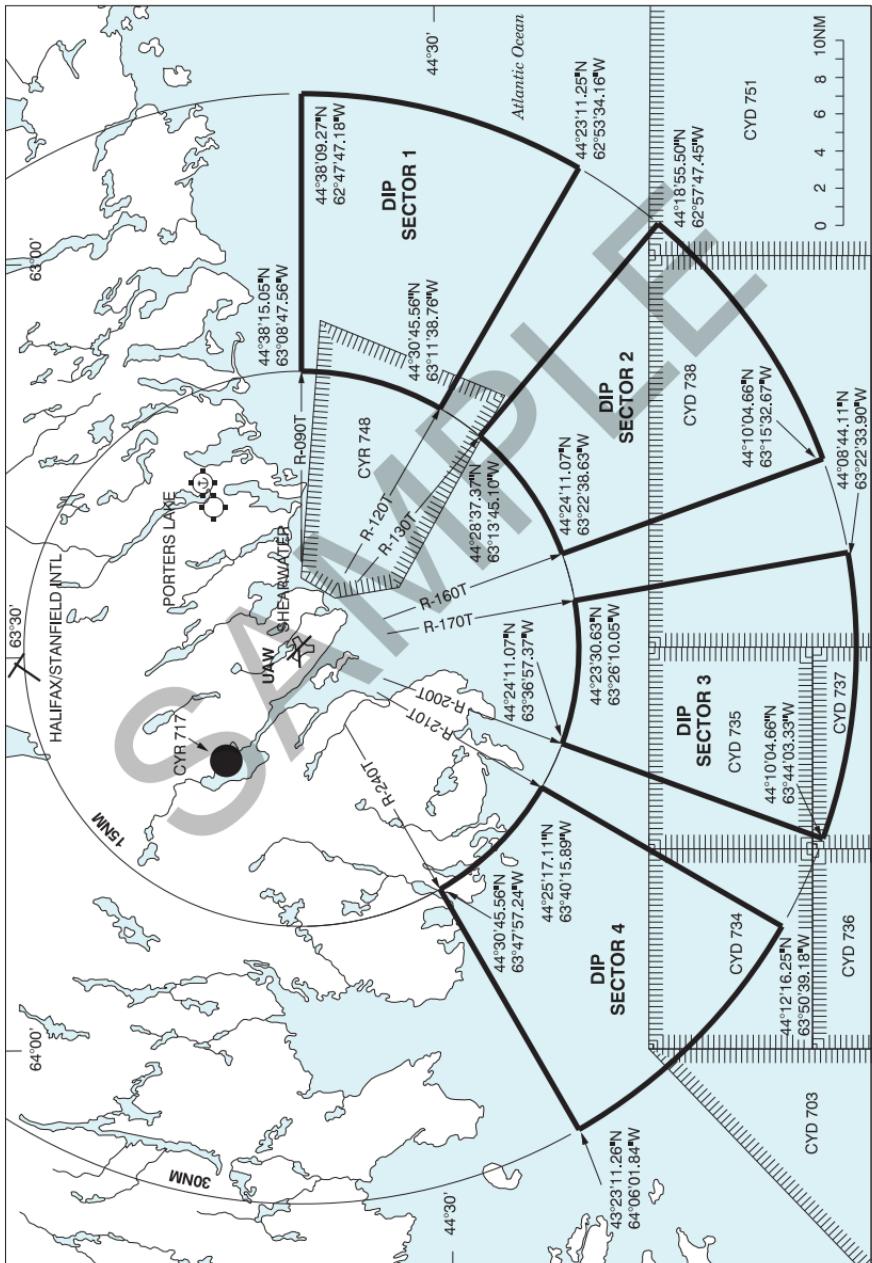

- (a) DIP Sector 1: UAW 090T°R - 120T°R, UAW 15-30 DME (coordinates N44 38 15.05 W63 08 47.56 to N44 38 09.27 W62 47 47.18 to N44 23 11.25 W62 53 34.16 to N44 30 45.56 W63 11 38.76)
- (b) DIP Sector 2: UAW 130T°R - 160T°R, UAW 15-30 DME (coordinates N44 28 37.37 W63 13 45.10 to N44 18 55.50 W62 57 47.45 to N44 10 04.66 W63 15 32.67 to N44 24 11.07 W63 22 38.63)
- (c) DIP Sector 3: UAW 170T°R - 200T°R, UAW 15-30 DME (coordinates N44 23 30.63 W63 26 10.05 to N44 08 44.11 W63 22 33.90 to N44 10 04.66 W63 44 03.33 to N44 24 11.07 W63 36 57.37)
- (d) DIP Sector 4: UAW 210T°R - 240T°R, UAW 15-30 DME (coordinates N44 25 17.11 W63 40 15.89 to N44 12 16.25 W63 50 39.18 to N43 23 11.26 W64 06 01.84 to N44 30 45.56 W63 47 57.24)

MARITIME PROVINCES - HAZARDS TO AIRCRAFT OPERATIONS (Cont'd)

2. Maritime helicopters conduct essential over-water training and proficiency flights in the DIP Sectors on a daily basis. These flights often involve the use of sonobuoys, and helicopters routinely transition to/from the hover while in the area. Typically, military flights operate in the area from 0700-2359 (L).
3. Aircraft operating in or above this area should contact Shearwater ATC on 126.2 MHz or 231.95 MHz for advisory info. If unable, operators should use 126.7 MHz to announce intentions while in the area.

FLIGHT RESTRICTIONS

FOREST FIRES

No person shall operate an aircraft in the airspace below 3,000 feet above ground level within five nautical miles of the limits of a forest fire area or as described in a NOTAM (CAR 601.15, 601.16, 601.17).

FLIGHT RESTRICTIONS INTO NATIONAL, PROVINCIAL AND MUNICIPAL PARKS

Access to National, Provincial and Municipal Parks is governed by regulations enacted by the respective parks authorities.

All National, Provincial and Municipal Parks are closed to aircraft unless otherwise specified in the AIP ENR 5.6.9 and/or the Supplements. On a prior permission basis, some parks will permit access to private flights, while others may authorize commercially registered aircrafts.

To help pilots obtain the required permission, Nav Canada publishes the name and telephone number of applicable park authorities, in the "Aerodrome/Facility Directory" of the Canada Flight Supplement/Canada Water Aerodrome Supplement, for any aerodrome/heliport located within park boundaries.

IFR FLIGHT TRAINING WITHIN 100NM RADIUS OF TORONTO INTL (CYYZ), ONTARIO

All IFR training, test flights and checkride flights between 1200-0200Z‡ must be coordinated with Toronto ACC prior to flight planning. For coordination, contact Toronto flow control (800)268-4831 or (905)676-3528.

RESTRICTIONS AFFECTING SEAPLANES

The **Canada Shipping Act, 2001**, through the **Vessel Operation Restriction Regulations** prohibits or imposes restrictions on the operation of vessels on certain lakes and waterways within Canada.

As a seaplane is considered a vessel while operating on the surface of a body of water, the **Vessel Operation Restriction Regulations** apply. The bodies of water affected and applicable restrictions may be found in the Schedules to the **Vessel Operation Restriction Regulations** -

<http://laws.justice.gc.ca/en/showtdm/cr/SOR-2008-120//?showtoc=&instrumentnumber=SOR-2008-120>

C114 PLANNING

MANDATORY IFR ROUTES

A system of mandatory IFR routes has been established to:

- (a) guide pilots in planning their route of flight;
- (b) minimize route changes during the operational phase of flight; and
- (c) to aid in the efficient and orderly management of the air traffic.

The mandatory IFR routes are designed to serve the needs of the airspace user and to provide for a systematic flow of air traffic in the major terminal and enroute phases. Cooperation by all pilots in filing mandatory IFR routes will result in fewer traffic delays in clearance delivery and will better provide for efficient departure, enroute, and arrival air traffic service.

The following explains the terms and abbreviations used in the listing.

Mandatory Route structure principles:

- Each route includes a start or end waypoint/navigation aid (pitch/catch concept)
- Does not contain MOCA or MEA
- Does not start with AIRWAY
- Only routes with less than 250NM between city pairs are designated (otherwise default to pitch/catch as in 1).
- Route to/from a cardinal point is also acceptable (N,S,E,W,NE,NW,SE,SW).
- Each route is compliant with ARINC 424 coding (machine-readable for flight planning/flight management systems).
- By default, mandatory routes are applicable for all route types unless specified otherwise (i.e. RNAV)
- Mandatory routes are shown in table format, one route per record, with up to 3 sections per FIR: general information/message, location-to-location/Cardinal point enter/exit route and overflights.
- ICAO ident and abbreviations applied throughout.
- Mandatory IFR routes are published for the airports under Canadian ATS control.

When filing routes between two navigational facilities or fixes, pilots are responsible for ensuring that the filed altitude will meet the minimum obstacle clearance requirements, that the navigational signal coverage is adequate and that the route will not penetrate Class F airspace.

In Controlled Airspace between Edmonton and Calgary, altitudes and flight levels which are not appropriate for the direction of flight may be assigned by ATC at any time to an aircraft at FL280 and below on the mandatory IFR route.

SAMPLE

CZEG EDMONTON FIR

In Controlled Airspace between Edmonton and Calgary, altitudes and flight levels which are not appropriate for the direction of flight may be assigned by ATC at any time to an aircraft operating to a maximum of FL280 on the mandatory IFR routes.

NORTHBOUND DEPARTURES overflying CYEG - from CYBW or CYYC

Pilots should be aware that with the introduction of RNAV routes; within the EG FIR, there are 2 northbound routes if overflying CYEG to destinations not listed in mandatory routes. These routes are type specific and should be flight planned as follows:

LOW LEVEL

- **NON-JETS** - SAXOL T761 ALKIK
- **JETS** - AVROM MAPUX

HIGH LEVEL

- **NON-JETS** - SAXOL Q965 ALKIK
- **JETS** - AVROM Q933 MAPUX

CYBW ARRIVALS

In addition to the mandatory routes listed, the following arrival routes are available.

LOW LEVEL

- From the EAST or NORTHEAST, arrivals between BOMIP and SHAWI are permitted via BIRKO MADYN ARR

HIGH LEVEL

- From the EAST or NORTHEAST, arrivals between IGVUX and SHAWI are permitted via BIRKO MADYN ARR

LOW or HIGH LEVEL

- From the SOUTH or SOUTHEAST, arrivals between VESDO and TOVUM are permitted via EBGAL ELBOW ARR
- From the SOUTHWEST, arrivals between ANTAK and MENBO are permitted via TULOB T707 IGVEP BRAGG ARR or via SEDEL T703 IGVEP BRAGG ARR

CYEG ARRIVALS

From the WEST, CYEG arrivals are permitted between ROMRA and YZU via ESKIE ESKIE ARR

CYYC ARRIVALS

Pilots should be aware that STAR Arrivals for CYYC are segregated between JETS and NON-JETS and are required to file the appropriate STAR for type of aircraft. In addition to the mandatory routes listed, the following arrival routes are available.

NON JETS

- From the SOUTH or SOUTHEAST, arrivals are permitted between VESDO and TOVUM via EBGAL TIDUK ARR
- From the SOUTHWEST arrivals are permitted between ANTAK and MENBO via TULOB T707 IGVEP VESGA ARR or via SEDEL T703 IGVEP VESGA ARR

LOW LEVEL

- From the EAST or NORTHEAST, arrivals are permitted between BOMIP and SHAWI via BIRKO TOTUB ARR

HIGH LEVEL

- From the EAST or NORTHEAST, arrivals are permitted between IGVUX and SHAWI via BIRKO TOTUB ARR

JETS

- From the SOUTH or SOUTHEAST, arrivals are permitted between VESDO and TOVUM via EBGAL EBGAL ARR
- From the SOUTHWEST arrivals are permitted between ANTAK and MENBO via TULOB T707 IGVEP IGVEP ARR or via SEDEL T703 IGVEP IGVEP ARR

LOW LEVEL

- From the EAST or NORTHEAST, arrivals are permitted between BOMIP and SHAWI via BIRKO BIRKO ARR

HIGH LEVEL

- From the EAST or NORTHEAST, arrivals are permitted between IGVUX and SHAWI via BIRKO BIRKO ARR

CZWG WINNIPEG FIR

Pilots, when applicable, should file the appropriate departure route and connect it to an Arrival route that best matches their desired route of flight.

If no mandatory departure route is published, file direct to the first enroute point.

STARs where published are the mandatory routes into airports. Pilots are expected to file the appropriate STAR. If no mandatory Arrival route or STAR is published, file direct to the airport.

If the route of flight is to extend outside of Winnipeg FIR, connect the routes published herein to the external route at the most logical point.

Routings through Cold Lake MTCA, Moose Jaw MTCA below FL320, and all CYRs and CYAs within the Winnipeg FIR, when active, are to be avoided.

CYYZ TORONTO FIR**LEAD-IN INFORMATION:**

- Pilots shall first verify if their point of departure has a mandatory routing. If no route is published file direct to the first enroute point.
- Pilots arriving at an airport within Toronto FIR should verify if that airport has a mandatory route for arrival. If none exists, file direct.
- If the route is to include a significant portion of "overflight" or enroute cruise through Toronto FIR, verify if an overflight route is published.
- If the route of flight is to extend outside of Toronto FIR, connect the routes published herein to the external route at the most logical point. Refer to Montreal or Winnipeg FIR as appropriate after the last given point.
- CYQG departures and arrivals are within the Toronto FIR, however are controlled by the FAA. Listed routings must be connected to the appropriate Toronto FIR overflight or arrival route.

RNAV Routes

- If unable to fly the listed RNAV routing, file an alternate routing via navaids and/or airway, adhering as closely as possible to the mandatory route and include RMK/NON RNAV.
- If unable to fly an RNAV SID and/or an RNAV STAR, file via the RNAV fixes within the procedure and include: RMK/NO RNAV SID and/or RMK/NO RNAV STAR.
- For U.S. destinations, a conventional STAR may be filed; no remark is required.

Single engine aircraft wishing to stay close to land, file RMK/NO OVER WATER.

Eastbound Routes:

- Routings via MIGLO are valid only for flights landing within the Montreal TCU.
- Routings via ELSUB are valid only for flights landing within the Ottawa TCU.
- Routings via MIVOK are valid only for flights landing with the Ottawa TCU or CYFJ or for NONJETS at 13,000 & BLW continuing towards PESAC.

DEPARTURES FROM THE FIR

Pilots departing the airports listed below should file the appropriate departure route, and connect it to the overflight or arrival route that best matches their desired route of flight. Where SIDs and STARs are filed, ensure a published transition point is used.

FAA airports: FAA agreement dictates that aircraft departing CYYZ and area, and arriving at airports contained within this document must file the mandatory routing listed. Aircraft departing CYYZ satellite airports for these destinations should join the mandatory route listed under CYYZ departures.

ARRIVALS WITHIN THE FIR

Pilots arriving at the airports listed below should file the appropriate arrival route, and connect it to the departure route or overflight route that best matches their desired route of flight. Refer to the adjacent FIR as required. Where STARs are filed, ensure a published transition point is used.

EASTBOUND OVERFLIGHTS (refer to Montreal FIR after last listed waypoint)

No eastbound flights will be permitted via MENKO, KENLU, ILUSI or YSO

Routes entering via FNT, HOCKE, a track DAYYY-RUBKI or north of DAYYY-RUBKI: random routing over or north of YXI to INF or coastal fix.

Routes entering from SVM or DJB: join via DERLO SIKBO towards IPTOS, LORKA, OLABA, MIGLO or MIVOK.

Routes entering from FNT or HOCKE: join via NUBER SIKBO towards IPTOS, LORKA, OLABA, RAKAM, TULEG, MIGLO or MIVOK.

WESTBOUND OVERFLIGHTS (refer to Montreal FIR prior to the first listed waypoint)

No westbound overflights will be permitted via IPTOS, LORKA, MIGLO, or OLABA.

Excluding KORD arrivals, random routing is acceptable for flights entering:

- North of YXI to SSM, ASP, or HOCKE
- North of a track LETAK Q824 TAGUM or LETAK-TVC
- North of a track YEE-DERLO

Flights landing at airports listed below must file an appropriate routing through the Toronto FIR to join the arrival route listed.

CZUL MONTREAL FIR

Pilots shall first verify if their point of departure has a mandatory departure routing. If no route is published, file direct to the first enroute point. If the route is to include a significant portion of enroute cruise through Montreal FIR, verify if an overflight route is published.

Pilots arriving at an airport within Montreal FIR shall verify if that airport has a mandatory route for arrival. If none exists, file direct.

If the route of flight extends outside of Montreal FIR, refer to the adjacent FIR mandatory route section for instructions. If none exists, connect the routes published herein to the external route at the most logical point.

Pilots departing from an airport within the Montreal Terminal airspace and filing a below listed routing over BOBK1 MELTI must maintain an IAS of 240kts or greater until 16000 feet. If unable they must advise ATC.

Routings through the Bagotville (CYBG) Military Restricted areas CYR664, CYR665 and CYR666 are to be avoided when areas are in operation.

Except for polar flights, westbound overflights transiting from Edmonton FIR to Montreal FIR north of 63N shall file over or west of AYROU.

Note for non-RNAV equipped aircraft:

The airspace route structure is based on unidirectional flows. In order to facilitate the flight, non-RNAV route planning shall be done by choosing NAVAID defined airways closest to the listed mandatory RNAV routes.

Where NAVAID based airways are not available, NAVAID direct NAVAID navigation can be used.

NORTH AMERICAN ROUTE PROGRAM (NRP)

General

A flight that originates and terminates within conterminous U.S. and Canada and North Atlantic international flights operating within the North American Route (NAR) System may participate in the NRP under the following procedures and requirements.

FAA/NAV CANADA Common Procedures

The following common FAA and NAV CANADA procedures apply:

- (a) Flights to operate at or above FL 290.

NORTH AMERICAN ROUTE PROGRAM (NRP) (Cont'd)

- (b) For that portion of flight within 200NM of the departure or destination airport, flights shall be filed and operated via Standard Instrument Departures (SIDs), Departure Procedures (DPs), Standard Terminal Arrival Routes (STARs) or published Mandatory IFR Routes. If none of the above are available, airways may be used.
- (c) NRP flights are not normally subject to routing restrictions such as published Mandatory IFR Routes or airways, beyond a 200NM radius of both the departure and destination airports.
- (d) Flight planning requirements are:
- (i) routes shall contain at least one significant point in each delegated area of airspace jurisdiction for each FAA Air Route Traffic Control Center (ARTCC) or Canadian FIR/CTA;
 - (ii) significant points may be a navigational aid or waypoint defined in fix-radial-distance (FRD) format from a navigation aid. Within Canadian airspace a significant point may also be a coordinate described in degrees and minutes of latitude/longitude;
 - (iii) for routes that cross the U.S./Canada border, a significant point within 30NM of either side of the border shall be filed;
 - (iv) significant points should be filed for all turnpoints;
 - (v) route(s) shall avoid active Class F airspace;
 - (vi) "NRP" shall be entered in the Remarks section of the flight plan; and
 - (vii) flight plans to be filed at least one hour prior to departure.
- (e) In the event that a NRP aircraft has to be recleared due to weather or tactical reasons, ATC will attempt to return the aircraft to the original NRP routing as soon as practical. Aircraft that depart from the NRP routing due to a pilot request or an ATC clearance authorizing a direct routing will be considered as a non participant of the NRP.
- (f) Unless published routing restrictions are in effect, North Atlantic international flights planning to operate within the North American Route (NAR) System may file NRP routes beyond 200NM of the NAR identified system airport and the published Inland Navigation Fixes (INFs).

Specific NAV CANADA Requirements

The following specific Canadian requirements apply:

- (a) When a significant point is defined by latitude and longitude the following applies:
- for flights operating on predominately north or south tracks (315°T clockwise through 045°T or the reciprocals), tracks shall be defined by reference to significant points formed by the intersection of whole degrees on longitude with specified parallels of latitude spaced at 5° of latitude expressed in longitude by degrees and minutes and latitude by degrees;
 - for flights operating on predominately east or west tracks (046°T clockwise through 134°T or the reciprocals), tracks shall be defined by reference to significant points formed by the intersection of half or whole degrees of latitude with meridians spaced at intervals of 10° expressed in longitude by degrees and latitude by degrees and minutes.
- (b) All flights to remain north of N48°15'00" W90°00'00" or south of N47°30'00" W90°00'00".
- (c) Toronto International (CYYZ). For aircraft landing at CYYZ, those aircraft inbound from the northwest are to terminate the NRP portion and join the BOXUM arrival at OTNIK.
- (d) Vancouver International (CYVR). For aircraft landing at CYVR, those aircraft arriving from the east and north of the Canada/USA border are to arrange routing to be north of J500 no later than the intersection LOCAN (N49°30.7' W117°33.1').
- (e) Ottawa/Macdonald-Cartier International (CYOW). For aircraft landing at CYOW, those aircraft inbound from the west are to terminate the NRP portion and join a mandatory arrival routing no later than the intersection SMARE (N46°19.6' W78°9.8').
- (f) Montreal/Pierre Elliott Trudeau International (CYUL). For aircraft landing at CYUL, those aircraft inbound from the west-northwest are to terminate the NRP portion and join a mandatory arrival routing no later than the Mirabel VOR/DME (YMX) (N45°53.3' W74°22.5') provided the route proceeds over or north of Maniwaki (YMW) (N46°12.5' W75°57.4'). For routes that do not comply with this requirement terminate the NRP portion and join a mandatory arrival routing no later than Maniwaki.

Specific FAA Requirements

C182 PLANNING

NORTH AMERICAN ROUTE PROGRAM (NRP) (Cont'd)

Refer to the current FAA Advisory Circular-NRP.

NORTH AMERICAN ROUTES (NARs) FOR NORTH ATLANTIC TRAFFIC

1. The objectives of the NAR System are as follows:
 - (a) To expedite flight planning;
 - (b) To reduce the complexity of route clearances and thereby minimize the confusion and error potential inherent in lengthy transmissions and readbacks; and;
 - (c) To minimize the time spent in the route clearance delivery function.
2. The NAR System is designed to accommodate major airports in North America where the volume of NAT traffic and route complexity dictate a need to meet the above requirements. It is for the use of traffic entering/exiting the NAT and consists of a series of pre-planned routes from/to coastal fixes and identified system airports. Most of the routes are divided into two portions:

<p>(a) Common Portion</p>	<p>– That portion of the route between a specified coastal fix or an oceanic entry/exit point and a specified inland navigation fix (INF). Some routes have a common portion only (N598A-N700A); and</p>
<p>(b) Non Common Portion</p>	<p>– That portion of the route between a specified INF and a system airport. The routes are within the high level airspace structure with a transition to/from system airports.</p>
3. The routes are prefixed by the abbreviation "N" with the numbering for the common portions orientated geographically from south to north. The ODD numbers have eastbound application while the EVEN numbers apply to westbound. Following a one to three digit number, an alpha character indicates the validation code and forms part of the route identifier. Validation codes are associated to amendments to the common routes only and not to non-common route portions.
4. Since a primary function of the NAR System is to complement the NAT traffic flow, a limited number of NAR routes, appropriate for coastal fixes or oceanic entry/exit points serving the Organized Track System (OTS) and the domestic traffic organization, are included in the NAT/OTS message published by the Gander and Shanwick Oceanic Area Centres.
5. Aircraft can only join the NAR System:
 - (a) At the identified coastal fix or oceanic entry/exit point; or
 - (b) On departure from one of the identified system airports; or
 - (c) At an identified INF.
6. **Flight Planning – GENERAL:**

WESTBOUND:

 - (a) Westbound routes begin at the oceanic exit points, thence along common route portions to an INF and then fan-out along non common routes to selected system airports;
 - (b) For aircraft proceeding to an identified system airport and the route of flight is described by a single NAR designator, use the designator; and
 - (c) For aircraft proceeding to a non system airport but the route of flight is described by the common route portion to an identified INF, use the designator to the INF followed by a detailed routing to the destination.

EASTBOUND:

 - (a) Eastbound routes only have a common portion from the INF to a coastal FIX or oceanic entry point;
 - (b) When the route of flight is described by a single NAR designator, use the designator;
 - (c) For aircraft departing from a non-system airport, file via an appropriate detailed routing to the applicable INF and thence via the common portion to the coastal fix or oceanic entry point using the NAR designator;

GENERAL:

NORTH AMERICAN ROUTES (NARs) FOR NORTH ATLANTIC TRAFFIC (Cont'd)

For those cases not described above, a detailed routing is required.

7. NAR- Requirement:

- (a) There is no requirement to flight plan and operate using the NAR system with the following exceptions:
 - i) Eastbound aircraft intending to operate on the NAR OTS and operating wholly on or south of a line between the intersections BAREE and TUDEP shall flight plan and operate using one of the NARs published on the daily OTS message.
 - ii) Westbound aircraft exiting the ocean via oceanic/coastal fixes JEBBY CARAC, BOBTU JAROM or RAFIN must file via one of the published NAR common portions as specified in the CFS unless re-entering NY oceanic via M201/M202/M203:
 - JEBBY CARAC - N26B, N28B, N30B, N32B, N34B
 - BOBTU JAROM - N46G, N48G, N50G, N52G, N54G, N56G, N58D, N60D, N62C
 - RAFIN - N76A, N78A, N80A, N82A, N84A, N86A, N88A, N90A.
- (b) NARs may be assigned by air traffic control for the tactical management of air traffic in Canadian Domestic airspace.
- (c) For operators who elect not to use the NAR system, the rules of the North American Route Program (NRP) apply.

8. Route Clearances:

- (a) For aircraft operating within the NAR System, the ATC routing clearance and pilot readback will be indicated by the NAR designator, eg: "North American Route 105C";
- (b) For aircraft operating in the NAR System but only using the common route portion, the ATC routing clearance and pilot readback will be indicated by the NAR designator followed by the detailed routing;
- (c) For aircraft not operating in the NAR System, the ATC routing clearance and pilot readback will be via a detailed route;
- (d) Aircraft cleared to a system airport via a NAR designator are to follow the common and the non common portion of the route to the system airport. If the issued NAR, either the common or non common portion, is incompatible or unacceptable, the pilot is to advise ATC accordingly.

9. Documentation:

It is expected that the following documentation will be carried on the flight deck of aircraft operating within the NAR system:

- (a) The current publications of NAV Canada, Canadian Flight Supplement, or Federal Aviation Administration, Airport Facility Directory (Northeast) or another product which provides the current NAR; and
- (b) Information in the current NAT/OTS message.

DME FREQUENCY PAIRING PLAN

The following list of paired "X" and "Y" DME frequencies is provided to allow DME equipped aircraft to use the DME function of TACAN's not collocated with a VOR. The "Y" frequencies are generally associated with an ILS. ICAO Annex 10, Vol. 1 refers.

VOR- ILS Freq MHz	TACAN Channel	VOR- ILS Freq MHz	TACAN Channel	VOR Freq MHz	TACAN Channel	VOR Freq MHz	TACAN Channel
108.00	17X	109.95	36Y	111.90	56X	113.85	85Y
108.05	17Y	110.00	37X	111.95	56Y	113.90	86X

SAMPLE

D4 RADIO NAVIGATION AND COMMUNICATIONS**VOR FACILITIES WITH REDUCED SERVICE VOLUMES**

(Service volume is that volume of airspace where adequate co-channel and adjacent channel protection is provided.)

VOR frequency assignments in Canada are normally protected against co-channel interference to a maximum radius of 200NM from the facility. However, in the Quebec City - Windsor - Sault Ste. Marie triangle the protection is only 150NM. Exceptions to these standards appear in the following table:

Location	Service volume	VOR frequency
Midland ON	VOR/DME 125 NM	112.8 MHz
Quebec QC	VORTAC 125 NM	112.8 MHz
Coehill ON	VOR/DME 055° clkwz to 145° 100 NM 145° clkwz to 235° 40 NM 235° clkwz to 055° 150 NM	115.1 MHz
Beauce QC	VOR/DME 135° clkwz to 275° 100 NM 275° clkwz to 315° 150 NM 315° clkwz to 135° 200 NM	117.2 MHz
Geraldton ON	VOR/DME 135° clkwz to 250° 150 NM 250° clkwz to 135° 200 NM	114.2 MHz
Prince George BC	VOR/DME Scalloping may be experienced on all radials from 20-60 NM	112.3 MHz
Sept-Iles QC	VOR/DME R-112 possibility of scalloping between 30 and 50 NM	114.5MHz
Whitehorse YT	VOR/DME R-074 is occasionally subject to severe scalloping	116.6 MHz

RADIO NAVIGATION AIDS BY LOCATION

This section provides variation information on VHF/UHF NAVAID facilities that do not fit into Section B "Aerodrome/Facility Directory", NAVIGATION (NAV).

Magnetic variation values for NDBs and magnetic declination values for which VORs and TACANs are physically set are shown.

Omission of a variation value indicates that magnetic variation data is not available for that location.

Any NOTAM regarding Canadian navigation facilities are issued under the appropriate NOTAM series, in accordance with their dissemination category. For more information on how to obtain NOTAM, NOTAM Regions and dissemination categories, consult AIP Canada (ICAO).

DND CANADA WIDE NDB AND TACAN INDICATORS

DND/DFSM has been assigned by Transport Canada 10 NDB indicators and 4 TACAN indicators that can be used Canada Wide by tactical/transportable terminals. Use of these indicators can only be authorized by DFSM, 613-992-8744. They are as follows:

Canada Wide NDB Indicators – UAA, UFF, UGG, UJJ, UKK, UNN, USS, UTT, UWW and UZZ.

Canada Wide TACAN Indicators – 8V to UBB
8W to UCC
9J to UDD
9L to UHH

SAMPLE

COMMERCIAL BROADCASTING STATIONS

The following listing is provided by the Department of Industry Canada and is updated every six months; it covers all Canadian AM stations 40W and higher. Commercial broadcasting stations that are within the coverage of a VTA are not shown on the VNC.

NOTE:

- (a) Some stations operate H24 but most operate 0700-2359 local time.
- (b) Power is listed in watts. Where there is separate power for day and night the night power is in parenthesis.

CAUTION:

- (a) A station may switch to a back-up transmitter without warning and the back-up facility may be at a different location.
- (b) Commercial Broadcasting Stations are subject to outage or change without NOTAM.
- (c) Some Commercial Broadcasting Stations will not identify themselves by their designated identifier.

Direct communication between pilot and forecaster.

AERONAUTICAL RADIO INCORPORATED (ARINC)

Aeronautical Radio Incorporated provides communications for air traffic services of the United States using common air/ground frequencies. These frequencies are listed below by the areas in which they are used. These frequencies are for use during emergency situations and when communications with control centres or military air/ground stations on military air/ground frequencies cannot be maintained. Users are advised that a charge may be levied for services provided other than air traffic services.

NORTH ATLANTIC

New York (ARINC) -	129.9,	(NAT-A)	21964	17946	13306	8906	5598	3016
		(NAT-E)	17952	13354	11309	8825	6628	2962

CARIBBEAN

New York (ARINC) -	130.7,	(CAR-A)	13297	11396	8846	6577	5550	2887
		(CAR-B)	17907	11330	8918	6586	5520	3455

CENTRAL EAST PACIFIC

San Francisco (ARINC) - 131.95,

POLAR ROUTES

A/G: For aircraft using the Polar Routes, ARINC has a remote LDOCF voice site at Barrow, Alaska, controlled from ARINC SFO Communications Centre. Although primarily for company type communications, ATC communications can be passed to and from Anchorage Centre under unusual or emergency situations. Site is available for Phone Patches and Radio Operator delivered message traffic. Barrow LDOCF frequencies are: 3494 6640 11342 13348 17925 21964.

SATCOM VOICE AVAILABLE AS ALTERNATIVE COMMUNICATIONS MEDIUM

Aircraft desiring to contact an ARINC Communications Centre should use the following numbers to call the appropriate ARINC Centre:

Oceanic Area	Centre	IMARSAT Number	Public Phone Number
Pacific	SFO	436625	925-371-3920
Atlantic	NYC	436623	631-244-2492

ARINC will also utilize SATCOM Voice as a normal operational backup to HF to initiate communications from ground-to-air on the rare occasion when HF communications cannot be established in a timely manner. SATCOM Voice may be used for either ATC or AOC (Aeronautical Operation Control) Communications. This capability will be on a "search, find and contact" basis initially, which may require some delay in contacting flights. Aircraft operators with aircraft currently cockpit SATCOM Voice equipped should contact ARINC at 1-410-266-4430 to provide, update or verify aircraft AES ID codes which are required to initiate ground-to-air calls.

NOTE: Only SSB avbl on HF freqs

E2 MILITARY FLIGHT DATA AND PROCEDURES

FLIGHT PROCEDURES

PROCEDURES FOR THE PREVENTION OF DANGEROUS MILITARY ACTIVITIES BETWEEN CANADA AND THE CIS

SECTION 1

Communication Channels:

For the purpose of implementing this Agreement, the armed forces of the Parties shall provide for establishing and maintaining, as necessary, communications at the following levels:

- (a) The Task Force Commander of the armed forces of one Party present in a Special Caution Area and the Task Force Commander of the armed forces of the other Party in the same Area;
- (b) Commander* of a ship, aircraft, ground vehicle or ground unit of the armed forces of one Party and the Commander* of a ship, aircraft, ground vehicle or ground unit of the armed forces of the other Party; and
- (c) Commander* of an aircraft of the armed forces of one Party and an air traffic control or monitoring facility of the other Party.

* "Commander" means the individual with authority to command or lead a ship, aircraft, ground vehicle or ground unit.

SECTION 2

Radio Frequencies:

1. To establish radio communication, as necessary, the following frequencies shall be used:
 - (a) between aircraft of the Parties or between an aircraft of one Party and an air traffic control or monitoring facility of the other Party: on VHF band frequency 121.5 MHz or 243.0 MHz, or on HF band frequency 4125.0 KHz (alternate 6215.0 KHz); after initial contact is made, the working frequency 130.0 MHz, or 4125.0 KHz should be used;
 - (b) between ships of the Parties and ship-to-shore: on VHF band frequency 156.8 MHz, or on HF band frequency 2182.0 KHz;
 - (c) between a ship of one Party and an aircraft of the other Party: on VHF band frequency 121.5 MHz or 243.0 MHz; after initial contact is made, the working frequency 130.0 MHz or 278.0 MHz shall be used; and
 - (d) between ground vehicles or ground units of the armed forces of the Parties: on VHF band frequency 44.0 MHz (alternate 46.5 MHz), or on HF band frequency 4125.0 KHz (alternate 6215.0 KHz).
2. The Parties agree to conduct necessary testing to ensure reliability of the communications channels agreed by the Parties.

SECTION 3

Signals and Phrases:

1. The Parties recognize that the lack of radio communication can increase the danger to the personnel and equipment of their armed forces involved in any incident which may arise as a result of dangerous military activities. Personnel of the armed forces of the Parties involved in such incidents who are unable to establish radio communication, or who establish radio communication but cannot be understood, shall try to communicate using those signals referred to in this Section. In addition, such personnel shall attempt to establish communications with other personnel of their armed forces, who in turn shall take measures to resolve the incident through communications channels set forth in this Agreement.
2. Ship-to-ship and ship-to-shore communications shall be conducted using signals and phrases as set forth in the International Code of Signals of 1965 and the Special Signals developed in accordance with the Agreement between the Government of the United States of America and the Government of the Commonwealth of Independent States on the Prevention of Incidents On and Over the High Seas of 1972. Aircraft-to-aircraft communications shall be conducted using signals and phrases for intercepting and intercepted aircraft contained in the Rules of the Air, Annex 2 to the 1944 Convention on International Civil Aviation (Chicago Convention). The additional signals and phrases contained in paragraph 4 of this Section may also be used.

3. Whenever aircraft of the Parties come into visual contact with each other, their aircrews shall monitor the frequency 121.5 MHz or 243.0 MHz. If it is necessary to exchange information, but communications in a common language are not possible, attempts shall be made to convey essential information and acknowledgment of instructions by using phrases referred to in paragraphs 2 and 4 of this Section. If radio communication is not possible, then visual signals shall be used.
4. The following summary plus table contains frequencies signals and phrases for communications between aircraft, ships, ground vehicles or ground units, in accordance with this Agreement:

FREQUENCIES FOR USE WITH RUSSIAN MILITARY AIRCRAFT (RMA)

Initial Contact

	Primary	Alternate	Sustained Communication
VHF	121.5 MHz	None	130.0 MHz
UHF	243.0 MHz	None	278.0 MHz
HF	4125.0 KHz	6215.0 KHz	4125.0 KHz

Always monitor GUARD. Attempt contact on the primary frequency, if no response, attempt the alternate frequency (if available), interceptors use appropriate visual signal. If sustained communication is desired, the calling party uses the additional phrase "RADIO CONTACT". After the other party responds with "RADIO CONTACT", both parties switch to the appropriate sustained frequency

TABLE OF CALL SIGNS FOR USE WITH RUSSIAN FORCES

Type Platform	Russian C.S. (Phonetic)	United States C.S.	Canadian C.S.
Aircraft	SEDLO (Sed-low')	IVORY EAGLE	HORSE
ATC or Monitor	ZEMLYA (Zem-le-yaw')	ELECTRIC LIGHT	CLOUD
Ship	BUGEL (Boo'-gel)	PORT MAST	BEAVER
Ground Unit	POLYA (Po-le-yaw')	POST POUNDER	SWORD

MUTUALLY AGREED PHRASES

CLOSE TO TERRITORY	(within 27NM/50KM of sovereign airspace)
TERRITORY ENTERED	(in sovereign airspace)
STOP INTERFERENCE	(stop dangerous command net radio interference)
STOP LASER	(stop dangerous use of laser)
LASER DANGER	(planned use of laser may create danger in this area)
REQUEST LANDING	(self explanatory)
RADIO CONTACT	(desire radio contact on sustained communication frequency)
WILCO	(understood will comply)
CANNOT	(understood/unable to comply)
REPEAT	(say again)
AM LOST	(position unknown)
MAYDAY	(international distress call)
DESCEND	(self explanatory)

E4 MILITARY FLIGHT DATA AND PROCEDURES

PROCEDURES TO INITIATE CONTACT WITH / WARN RUSSIANS

1. Transmit his call sign three times
2. Followed by "DELTA ECHO" (meaning from)
3. Followed by your call sign (IVORY EAGLE or ELECTRIC LIGHT)
4. Followed by appropriate agreed phrase. For example:
SEDLO, SEDLO, SEDLO, DELTA ECHO, IVORY EAGLE, agreed phrase"

Expected Response:

RMA alters course, stops interference, etc.

Radio acknowledgement, if accomplished, should be as below:

1. RMA transmits your call sign three times
2. Followed by "DELTA ECHO"
3. Followed by his call sign (SEDLO)
4. Followed by appropriate agreed phrase, if required:
"IVORY EAGLE, IVORY EAGLE, IVORY EAGLE, DELTA ECHO, SEDLO"

SUBSEQUENT TRANSMISSIONS use call signs only once:

"IVORY EAGLE, DELTA ECHO, SEDLO, REQUEST LANDING"

SAMPLE

ADDITIONAL SIGNALS, PHRASES AND APPROPRIATE RESPONSES

MEANING OF SIGNAL/PHRASE	VISUAL SIGNALS FOR AIRCRAFT	PHRASE	PRONUNCIATION	APPROPRIATE RESPONSE
You are in close proximity to our national territory	DAY and NIGHT —The intercepting aircraft flying abeam and parallel to the intercepted aircraft, rocking wings and flashing navigation lights at slow regular intervals, followed by a series of shallow bank "S" turns, in the horizontal plane, approximately 10 degrees either side of line of flight.	"CLOSE TO TERRITORY"	CLOSE-TO TERR-I-TORY	Intercepted aircraft turns away from national territory.
You have entered into our national territory	DAY and NIGHT —The intercepting aircraft, flying abeam and parallel to the intercepted aircraft, rapidly flashing navigation lights while rocking wings, followed by a shallow turn executed in the horizontal plane, with a 15-20 degree bank in the direction of the intercepted aircraft. The approach shall be accomplished with great caution and not closer than one wing span. Repeat until intercepted aircraft acknowledges or radio contact is established.	"TERRITORY ENTERED"	TERR-I-TORY EN-TERED	Intercepted aircraft shall follow the appropriate instructions of the intercepting aircraft.
I need to land	DAY and NIGHT —The aircraft flashes its navigation lights repeatedly and rapidly while rocking wings, followed by a gentle porpoising of the aircraft.	"REQUEST LANDING"	RE-QUEST LAN-DING	Intercepting aircraft assists intercepted aircraft.
I request radio communications on 130.0 MHz or 278.0 MHz (Initial contact is established on 121.5 MHz or 243.0 MHz)	DAY and NIGHT — If 121.5 MHz and 243.0 MHz are inoperative, aircraft continuously alternates one long with one short flash of navigation lights while rocking wings.	"RADIO CONTACT"	RA-DI-O CON-TAC	Acknowledge requesting aircraft, ship, or air traffic control or monitoring facility with phrase "RADIO CONTACT". After contact is made, tune to 130.0 MHz or 278.0 MHz.
My aircraft requests radio contact with your ship on 121.5 MHz or 243.0 MHz	DAY and NIGHT — Aircraft circling the ship, in a left hand turn, at a safe distance and altitude until radio contact is established.	"RADIO CONTACT"	RA-DI-O CON-TAC	The aircraft and ship establish radio contact by exchanging the phrase "RADIO CONTACT"; then both shall switch to 130.0 MHz or 278.0 MHz, as appropriate, for further radio communication.
I am experiencing a dangerous level of interference with my command and control network. (Transmit PHRASE on contact frequency)	NONE	"STOP INTERFERENCE"	STOP IN-TER-FER-ENCE	Investigate the circumstances and, as appropriate, terminate any activities which may be causing the dangerous interference.
My planned use of a laser may create danger in this area. (Transmit PHRASE on contact frequency)	NONE	"LASER DANGER"	LAS-ER DAN-GER	Take appropriate measures to prevent harm to personnel or damage to equipment.
I am experiencing a dangerous level of laser radiation. (Transmit PHRASE on contact frequency)	NONE	"STOP LASER"	STOP LA-SER	Investigate the circumstances and, as appropriate, terminate any use of a laser that could harm to personnel or damage to equipment.

E6 MILITARY FLIGHT DATA AND PROCEDURES**MILITARY ADIZ - NORTH ATLANTIC**

- (a) Military aircraft which will penetrate the ADIZ towards the continental land mass of Greenland and North America shall file an IFR or DVFR flight plan or Defense flight itinerary with an appropriate ATC unit or ADIZ station including the estimated time and place of ADIZ penetration. The pilot-in-command of an aircraft operating on an IFR flight plan and in accordance with an ATC clearance on a flight that will penetrate the ADIZ is not required to include estimated time and place of ADIZ penetration in the filed flight plan or in a routine in-flight position report.
- (b) Aircraft departing from a location within the ADIZ shall file an IFR or DVFR flight plan with an ATC unit or ADIZ station prior to take-off.
- (c) Aircraft departing from locations within Greenland or within the ADIZ where flight planning facilities are not available shall: contact an ATC unit or ADIZ station as soon as possible, and airfile, including estimated time and place of ADIZ penetration where applicable and Nuuk FIC 121.3 ADIZ 126.2 236.6

NOTE: Aircraft operating laterally within the ADIZ shall conduct as much of the flight as possible south of the centreline.

REPORTING: PX to ADIZ station as soon as possible after take-off.

TOLERANCES: Estimates shall be revised, with ATC or ADIZ station, if the aircraft will not be within 5 minutes or 20 nm.

RADIO EQUIPMENT: IFF/SIF - Military aircraft so equipped shall operate IFF/SIF in accordance with command directions (for US/CAN military aircraft, NORAD IFF/SIF Instr. 1-61 refers) RADAR - Radar assistance is available in emergencies.

VHF/UHF DIRECTION FINDING EQUIPMENT

VHF/UHF Direction Finding (DF) equipment installed at Canadian Forces ATC Units is authorized as a navigational aid for Canadian Forces aircraft operating under VFR or IFR. Service provided includes homing, check steers and bearings and emergency approach procedures.

MILITARY ADIZ - ICELAND

APPLICATION: All US military aircraft

FLIGHT PLANNING: File DVFR or IFR when the flight penetrates or operates within the Iceland Military ADIZ. Pilots departing on DVFR flight plans from joint use airports will append the initial call up to the appropriate civil authority with the phrase "DVFR to (destination)".

NOTE: Airfile will not be submitted for flights penetrating or operating within the Iceland Military ADIZ. However, changes may be initiated en route if the flight has continued IFR or DVFR to the point of change.

REPORTING: Prior to entering or operating in the ADIZ, report time, position and altitude at last reporting point along path and ETA next reporting point, or estimate time, position and altitude of penetration no sooner than 30 nor later than 15 minutes prior to penetration. Make position reports at least once an hour within ADIZ or as required, use established reporting points when practicable.

TOLERANCES:

TIME – Plus or minus 5 minutes.

DISTANCE – 20NM from centreline of proposed route if entering or operating within Military ADIZ.

ALTITUDE DEVIATION – None, unless an amended ATC clearance is obtained, or, if operating where no ATC clearance is required, prior notice is given to an appropriate facility, except that in this case normal descent may be initiated a reasonable distance from the intended destination.

REVISIONS: Transmit corrected information to an appropriate facility immediately it becomes apparent that the flight plan cannot be adhered to.

EMERGENCY PROCEDURES: If deviation from current flight plan becomes necessary, report this as soon as practicable to Military Flight Service and/or the appropriate Icelandic facility. Flight plans will not be submitted or changed in flight to provide initial entry into the ADIZ except in an emergency.

AIR REFUELING ROUTES IN CANADIAN AIRSPACE

The DND/DoD have established air refueling (AR) tracks and air traffic control procedures for use in Canadian airspace. The ARs are described below. For additional information, contact 1 Canadian Air Division. Attention: SO ASR.

REMARKS:

AR-62 (E) & AR-62 (W): Track comes within 12NM of CYA732 (controlled by Goose Bay). Primary means of scheduling track reservation requests is email to: doas@heads.and.al.mil. Transatlantic fighter crossings will still require altitude reservations.

Petro North: Airspace Reservation Area is 30NM wide x 808NM long. (15NM either side of track).

Minaki: Airspace Reservation Area is 30NM wide x 271NM long. (15NM either side of track).

Note 1: Alternate Primary freq: 305.5. Alternate Backup freq: 265.65

Note 2: AR20 (SW) REFUELING ALTITUDES: btwn FL220 and FL250, or btwn FL260 and FL280

Note 3: AR128 - A 3000' block altitude is approved subject to direction of flight; e.g. eastbound FL250B270 // westbound could be FL220B240 / etc.

***CR PLAN: A - Primary UHF, B - Backup UHF, C - APN69/134/135 settings, D - APX 78/Encode/decode settings, E - TACAN channels Receiver/Tanker**

CANADIAN MILITARY AERONAUTICAL COMMUNICATIONS SYSTEM (MACS)

This service is provided for non-tactical air-ground communications and may be used for position reporting, weather information and search and rescue. MACS aeronautical stations have point-to-point relay capability which is also supported for message traffic by a teletype. Therefore, position reports and messages destined for any location may be relayed through any MACS station.

PHONE PATCH – Facilities are available at each MACS aeronautical station to provide official phone patch service in accordance with existing communication instructions. In addition to normal telephone lines, MACS Edmonton, Trenton and St. John's have the capability of patching into GP CSN/AUTOVON. THIS FACILITY IS INSECURE. CLASSIFIED MATTERS SHALL NOT BE DISCUSSED.

FLIGHT DATA AND PROCEDURES - UNITED STATES**(U.S. AIRSPACE) GENERAL**

When planning flights into United States (U.S.) airspace, aircrew should be aware of the pertinent information contained in the U.S. DOD planning and information documents and publications. GPH 270, FIH, DOD Enroute Supplements and corresponding FLIPs should be consulted before flight.

IN-FLIGHT TECHNICAL ASSISTANCE

Military aircraft requiring in-flight emergency or technical assistance may avail themselves of the facilities listed below. Phone patch may be available through these agencies.

- A. North American Aerospace Defence Command (NORAD)
Call sign: NORAD SECTOR freq: 364.2 MHz
- B. Strategic Command (STRAT COMM)
Call sign: SKYBIRD freq: 311.0 MHz
- C. Air Combat Command (ACC)
Call sign: GOLDEN freq: 381.3 MHz
- D. Air Mobility Command (AMC)
Call sign: MAINSAIL freq: 11175 kHz

NOTE: For frequency listings, telephone numbers, and additional procedures world-wide, see DOD Flight Information Handbook (FIH).

USE OF RUNWAY CONDITION READING

U.S. Navy/U.S. Army use of Runway Conditions Readings (RCR), runway condition (braking action) at USAF bases and certain U.S. Navy and U.S. Army airfields is determined by the use of decelerometers. Runway condition at USAF bases is reported by ATC facilities in terms of runway condition reading (RCR). By comparing the RCR to a table in the applicable aircraft flight manual, USAF pilots can determine predicted landing ground roll distances. However, similar tables are not available in the NATOPS manuals for naval aircraft or in army aircraft handbooks. Accordingly, a table of equivalents is furnished to provide a convenient method of converting RCR to comparable braking action and predicted landing ground roll distances for use by Navy and Army pilots. Runway condition at U.S. Navy and U.S. Army airfields will be reported by air traffic controllers in terms of equivalent braking action as delineated in the following table. NOTE - Joint USAF/NASA test have proven RCR measurements invalid where the only form of moisture affecting the runway is water. Readings taken during such conditions will be reported as Wet Runway - WR. Measurements taken when water is present in ice or slush will be reported as RCR 12 or the measured decelerometer reading, whichever is lower.

Runway Condition Reading (RCR)	Equivalent Braking Action	Percent Increase in Landing Roll
02 to 05	Nil	100% or more
06 to 12	Poor	99% to 46%
13 to 18	Fair (Medium)	45% to 16%
19 to 25	Good	15% to 0%

Runway surface conditions and RCR readings as reported by base operation are appended to hourly aviation weather observations in coded form based on the following:

Wet Runway	WR
Slush on Runway	SLR
Loose Snow on Runway	LSR
Packed Snow on Runway	PSR
Ice on Runway	IR
Patchy conditions (ice, snow or water)	*P
Runway Sanded	SANDED

Asterisk code "P" will be used when the runway is less than fully covered by the coded RSC element. After patchy, a wet or dry report will be added to describe the portions of the runway not covered by ice, snow or slush. Examples:

Condition	Code
Pack snow on runway	PSR 15
Ice on runway - Decelerometer reading of 05.	IRO5P/SANDED
Condition patchy, runway sanded	

NOTE: The Air Force is conducting tests to determine the actual runway condition reading (RCR) of all USAF runways under wet runway conditions. As the tests are completed, the information will be included within the Aerodrome/Facility Remarks for each base.

The following conversion table from CRFI to RCR is provided for military operators operating in Canada whose aircraft operating instructions refer to RCR values.

CRFI	RCR	CRFI	RCR	CRFI	RCR
.2	3.6	.45	11.0	.6	17.0
.25	5.5	.5	13.0	.7	19.0
.3	7.5	.55	15.0	.75	20.5
.4	9.5				

E16 MILITARY FLIGHT DATA AND PROCEDURES

BRAKING COEFFICIENT AND CONVERSION TABLE

GROUND VEHICLE FRICTION CORRELATION CHART
Nominal Test Speed, 65 Km/h (40 mph)⁹

GROUND VEHICLE READING						
BRAKING ACTION LEVEL	RCR ¹	DECEL METERS ²	MU-METER	SURFACE FRICTION TESTER ⁴	RUNWAY FRICTION TESTER ⁵	BV-11 SKIDDO-METER ⁶
GOOD	> 17	> 0.53	> 0.58	> 0.50	> 0.54	> 0.51
FAIR	12-17	0.37-0.53	0.40-0.58	0.35-0.50	0.38-0.54	0.35-0.51
POOR	6-11	0.17-0.36	0.20-0.39	0.15-0.34	0.18-0.37	0.18-0.34
NIL	≤ 5	≤ 0.16	≤ 0.17	≤ 0.14	≤ 0.16	≤ 0.15

NOTES: 1. RCR=Runway Condition Report=Decelerometer reading x 32

2. Decelerometers include Tapley, Bowmonk, and electronic recording decelerometer
3. CRFI=Canadian Friction Index

4. Measurements obtained with grooved aero tire inflated to 690 kPa (100 psi)

5. Measurements obtained with smooth ASTM 4 x 8.0 tire inflated to 210 kPa (30 psi)

6. Measurements obtained with smooth ASTM tire inflated to 140 kPa (20 psi)

7. ASTM E-274 skid trailer and E-503 diagonal-braked vehicle equipped with ASTM E-524 smooth test tires inflated to 170 kPa (24 psi)

8. ICAO=International Civil Aviation Organization

9. A wet runway produces a drop in friction with an increase in speed. If the runway has good texture, allowing the water to escape beneath the tire, then the friction value will be less affected by speed. Conversely, a poorly textured surface will produce a larger drop in friction with increase in speed. Friction characteristics can be further reduced by poor drainage because of inadequate slopes or depressions in the runway surface.

NAVY/MARINE CORPS AIRFIELD CATEGORIES

Cat A Afld - Supports IFR operations, with authorized PAR approaches less than 100' HAT, 1/4 mile visibility or 1200' RVR.

Cat B Afld - Supports IFR operations, with authorized PAR approaches less than 200' HAT, 1/2 mile visibility or 2400' RVR - but not less than 100' HAT, 1/4 mile visibility or 1200' RVR.

Cat C Afld - Supports IFR operations, with authorized PAR approaches to not less than 200' HAT, 1/2 mile visibility or 2400' RVR.

Cat D Afld - All other airfields supporting IFR operations.

U.S. COAST GUARD SHORE RADIO STATIONS MAINTAINING WATCH ON 8364 kHz

The following Coast Guard radio stations listen on the 8 MHz ship radio telegraph calling band 8354-8374 kHz of which 8364 kHz is the centre frequency. Stations receiving a call in the 8 MHz band will normally reply on the frequencies indicated.

MILITARY AIRCRAFT ACCIDENT/INCIDENT REPORTING PROCEDURES**OCCURENCE****ACTION BY**

Unit of Occurrence

or

Aircraft Captain

or

Senior Survivor

AIR/GROUND ACCIDENTS OF A
AND B CATEGORY

and/or

FATAL, VERY SERIOUS OR
SERIOUS INJURY

and/or

MISSING AIRCRAFT

MISSING PERSON(S)

Notify the unit of ownership by fastest possible means. If impractical, phone the Canadian Forces Integrated Command Centre (CFICC) (1-613-998-4136). Inform the CFICC duty watch officer of the nature of the call and give all available information in format below. The CFICC will record this information and subsequently disseminate to DFS who will inform appropriate authorities concerning foreign military aircraft in Canada.

SIGNIFICANT EVENT

(An aircraft event involving either prominent persons, or circumstances likely to create public interest.)

If outside North America or Europe, notify the nearest Canadian diplomatic or Foreign Liaison Staff. If a fatality is involved, notify the local coroner and Attorney General of Province.

Telephone report to the CFICC (1-613-998-4136) followed by an Aircraft Occurrence Report in the format below.

**AIR/GROUND
ACCIDENTS/INCIDENTS**

Notify the unit of ownership by fastest possible means. If impractical, telephone the CFICC: (1-613-998-4136). Collect calls accepted.

CATEGORIES OF DAMAGE:

These definitions will determine the type of report.

ACCIDENTS

A CATEGORY The aircraft is destroyed, declared missing or damaged beyond economical repair.

B CATEGORY The aircraft must be shipped, not flown under its own power, to a contractor or depot level facility for repair.

E18 MILITARY FLIGHT DATA AND PROCEDURES**MILITARY AIRCRAFT ACCIDENT/INCIDENT REPORTING PROCEDURES**

- C CATEGORY** The aircraft sustains damage to a major component requiring repair beyond field level resources including those occurrences where:
- (1) the aircraft must be flown to a contractor or depot level facility for repair;
 - (2) the damaged major component is shipped to a contractor or depot level facility for repair;
 - (3) the repair is carried out by a mobile repair party from depot level or contractor; or
 - (4) the major component is damaged beyond economical repair.

INCIDENTS

- D CATEGORY** Damage to any component that is repaired within field level resources. Note that because powerplants are not classed as major components, any powerplant damage shall be classified in this category regardless of the repair level.

- E CATEGORY** The aircraft (including powerplant) has no damage, but accident potential exists.

ACCIDENT/INCIDENT REPORT FORMAT:

Send to:

COMMAND OF OCCURRENCE
COMMAND OF OWNERSHIP
UNIT OF OWNERSHIP

info copy to:

NDHQ OTTAWA
LOGCON OTTAWA
DCIEM TORONTO (all accidents and incidents with aeromedical aspects)

Subject: AIR ACCIDENT/INCIDENT; or AIRCRAFT GROUND ACCIDENT/INCIDENT
 (Add ARMAMENT IMPLICATIONS if appropriate)

1. Injury classification – Green (no injury)
 - Yellow (minor injury)
 - Red (major injury)
 - Black (fatal)
 - Grey (missing)
2. Aircraft type, registration number, and engine serial number if applicable.
3. Unit and Command to which aircraft belongs.
4. Geographic location of occurrence. Give specific position only in case of actual crash site. For other occurrences a general description is sufficient (local area etc.)
5. Category of Damage.
6. Person(s) involved - SIN, (include rank and name only for accidents), how to contact (when means of communication not obvious).
7. Type of flight (Training, Ferry, Testing, Display, etc, or N/A).
8. Description of occurrence. To include significant weather, property damage and armament factors if applicable.
9. What further reporting is planned? – none, Supplementary Report, CF210, Board of Inquiry. Note that if the answer is "none", the information required in the SR must be appended to the initial report (GA-135 refers).
10. Recommended immediate corrective action.
11. Casualties – name and nature of injury (minor injury, serious injury, very serious injury, killed, missing).

MILITARY AIRCRAFT ACCIDENT/INCIDENT REPORTING PROCEDURES

12. Barrier engagement:
- speed and weight at engagement;
 - position and angle of engagement from runway centreline;
 - use of brakes at engagement?
 - chute used?
 - runout distance;
 - successful or unsuccessful - explain;
 - reason for engagement;
 - damage to arresting system;
 - elapsed time until arresting system available for re-use;
 - aircraft damage caused by engagement.

NEAR-MISS REPORTING PROCEDURES

NON-MILITARY PILOTS

Pilots experiencing a near-miss with military (DND) aircraft should report these occurrences to DND
Attn: 1 CAD ICP at (204) 833-2500 Ext 5512 or Fax at (204) 833-2717.

F2 EMERGENCY**TRANSPONDER OPERATION**

A transponder may, at any time, be adjusted to reply to

- (a) Code 7600, to indicate a communication failure;
- (b) Code 7700, to indicate an in-flight emergency; or
- (c) Code 7500, to indicate hijacking of the aircraft. (see unlawful interference)

UNLAWFUL INTERFERENCE (HIJACK)

Selection of the code activates an alarm system and points out the aircraft on radar displays. If the controller doubts that an aircraft is being hijacked (as could occur when a code change was requested and the hijack code appears rather than the assigned code), the controller will say, CONFIRM SQUAWK SEVEN FIVE ZERO ZERO. If the pilot answers yes, the controller will alert the ATC system. If the pilot replies no, the controller will re-assign the proper code. If the pilot does not reply, the controller will take this as confirmation that the use of Code 7500 is intentional. If after using Code 7500 an aircraft changes to Code 7700, or transmits a message including the phrase TRANSPONDER SEVEN SEVEN ZERO ZERO, it indicates that the aircraft is threatened by grave and imminent danger and requires immediate assistance.

TRAFFIC CONTROL LIGHT SIGNALS

Pilots without radio equipment should observe the tower for light signals. Acknowledge signals in the daytime by movement of ailerons or rudder on the ground and by rocking wings in the air. Acknowledge signals at night by flashing aircraft lights.

Color and Type

of Signal	On the Ground	In Flight
STEADY GREEN	Clear for take-off	Cleared to land
FLASHING GREEN	Cleared to Taxi	Return to landing (to be followed by steady green at proper time)
STEADY RED	Stop	Give way to other aircraft and continue circling
FLASHING RED	Taxi clear of landing area (runway) in use	Airport unsafe-do not land
FLASHING WHITE	Return to starting point on airport	
RED PYROTECHNICAL LIGHT		Notwithstanding any previous instructions. Do not land for the time being.
Projectiles at 10 sec intervals which burst into red and green lights or stars		Means: "You are in the vicinity of a prohibited, danger or restricted area, alter course".

FUEL DUMPING**GENERAL**

Whenever it is necessary to jettison fuel, the pilot should immediately notify ATC and provide information such as the course to be flown, the period of time and weather conditions. ATC may suggest an alternate area where fuel should be dumped; aircraft will be encouraged to dump fuel on a constant heading over unpopulated areas and clear of heavy traffic. When necessary information has been obtained, ATC will broadcast on appropriate frequencies a "fuel dumping advisory". Pilots should advise ATC immediately when fuel dumping has been completed. Environmental regulatory authorities must be notified of fuel jettisoning events.

MIL: Reporting shall be in accordance with 1 CAD HQ Uniform Spill Reporting Protocol. For detailed description of Aircraft Fuel Jettisoning, see B-GA-100-001/AA-000, Book 1 - Flight Rules, Chapter 6.

MINIMIZING FUEL JETTISONING

No person shall jettison fuel from an aircraft in flight unless all appropriate measures are taken to minimize the danger to human life and the environment. Fuel jettisoning shall only take place when necessary to ensure aviation safety insofar as:

- (a) It is necessary to do so to achieve safe flying or landing conditions; or
- (b) It is necessary to verify aircraft serviceability by conducting maintenance flight tests.

MINIMIZING THE IMPACT OF FUEL JETTISONING

Surface level impacts from fuel jettisoning are primarily dependent on the amount and type of fuel jettisoned, the altitude at which the jettisoning occurs, the location of jettisoning and the climatic conditions. In all cases, fuel jettisoning shall:

- (a) Be limited to the minimum amount necessary to ensure safe flight and landing conditions or to verify aircraft serviceability;
- (b) Unless emergency conditions dictate otherwise, be conducted at an altitude that will reduce to a minimum the amount of fuel reaching the ground. In non emergency conditions, 5000 feet AGL shall be used as a minimum altitude; and
- (c) Unless emergency conditions dictate otherwise, be conducted in designated areas.

SEARCH AND RESCUE

REQUEST FOR SEARCH AND RESCUE SERVICES

As soon as information is received that an aircraft is overdue, operators or owners should immediately alert the nearest JRCC or any ATS unit, giving all known details. The alerting call should not be delayed until after a small-scale private search. Such a delay could deprive those in need of urgent assistance at a time when it is most needed.

VICTORIA

(serving British Columbia and the Yukon)
Joint Rescue Coordination Centre Victoria
Tel.: 1-800-567-5111 (within region)
250-413-8933
#SAR or #727 (toll-free cellular)

TRENTON

(serving Alberta, Manitoba, Northwest Territories, western Nunavut, Ontario, western Quebec, Saskatchewan)
Joint Rescue Coordination Centre Trenton
Tel.: 1-800-267-7270 (within Canada)
613-965-3870

HALIFAX

(serving New Brunswick, Newfoundland and Labrador, Nova Scotia, eastern Nunavut, Prince Edward Island, eastern Quebec)
Joint Rescue Coordination Centre Halifax
Tel.: 1-800-565-1582 (within region)
902-427-8200

All JRCCs will accept collect telephone calls dealing with missing or overdue aircraft.

RECOMMENDED PROCEDURES TO ASSIST IN SEARCH

The flight plan and flight itinerary are the primary sources of information for SAR operations. Therefore, proper flight planning procedures must be followed and the filed routes adhered to in order to ensure early detection and rescue. It is therefore critical to the safety of the pilots to advise ATS of any en route change or deviation as soon as practicable.

Refer to TC AIM RAC for details relating to filing and closing various plans or itineraries.

F4 EMERGENCY

SEARCH AND RESCUE (Cont'd)

IF YOU CRASH LAND

EMERGENCY LOCATOR TRANSMITTER (ELT):

ELTs are required for most general aviation aircraft (see CAR 605.38). They operate on a primary frequency of 121.5 MHz, 243 MHz, or 406 MHz, and help search crews locate downed aircraft and rescue survivors.

When activated, ELTs emit a signal that is detected by the international satellite system for search and rescue, COSPAS-SARSAT. Position information is calculated and relayed to the appropriate JRC/C for action. The 121.5 MHz signal common to all ELTs also produces a distinctive siren-like tone that can be heard on a radio receiver tuned to this frequency. This signal helps incoming SAR responders pinpoint an aircraft's position. During routine operations, hearing a 121.5 MHz signal also alerts pilots to the inadvertent activation of their ELT. The frequency should therefore be monitored briefly after each flight.

Properly maintained ELTs with serviceable batteries should provide continuous operation for a minimum of 24 hr at a wide range of temperatures. Batteries that remain in service beyond their recommended life may not provide sufficient power to produce a usable signal. ELTs that contain outdated batteries are not considered to be serviceable.

All ELTs currently operating on 406, 121.5 and/or 243 MHz can be detected by COSPAS-SARSAT satellites. However, it is vital to note that effective February 1, 2009, COSPAS-SARSAT satellites will only detect 406 MHz ELT signals. After that date, a 406 MHz ELT will be required to ensure the COSPAS-SARSAT system is automatically notified in the event of an aircraft crash.

When to Activate (Emergency conditions):

The ELTs in general aviation aircraft contain a crash activation sensor, or G-switch, which is designed to detect the deceleration characteristics of a crash and automatically activate the transmitter. However, it is always safest to place the ELT function switch to "ON" as soon as possible after the crash, if practicable.

COSPAS-SARSAT satellites continually overfly Canada and will detect ELT signals within 90 min. In the case of aircraft equipped with a 406 MHz ELT, geostationary satellites (GEO) will detect the ELT within minutes, alerting the SAR system that there is an emergency, even while the final position is calculated.

Some military and commercial aircraft also monitor 121.5 MHz or 243 MHz and will notify ATS or SAR agencies of any ELT transmissions they hear.

In case of emergency, do not delay ELT activation until flight-planned times expire, as such delays will only delay rescue. Do not cycle the ELT through "OFF" and "ON" positions to preserve battery life, as irregular operation reduces localization accuracy and will hamper homing efforts. Once your ELT has been switched to "ON", do not switch it "OFF" until you have been positively located and directed to turn it off by the SAR forces.

If you have landed to wait out bad weather, or for some other non-emergency reason, and no emergency exists, do not activate your ELT. However, if the delay will extend beyond:

- (a) flight plan-1 hr past ETA; or
- (b) flight itinerary-the SAR time specified, or 24 hr after the duration of the flight, or the ETA specified;

your aircraft will be reported overdue, and a search will begin.

To avoid an unnecessary search, notify the nearest ATS unit of your changed flight plan or itinerary. If you cannot contact an ATS unit, attempt to contact another aircraft on one of the following frequencies in order to have that aircraft relay the information to ATS:

- (a) 126.7 MHz;
- (b) local VFR common frequency;
- (c) local ACC IFR frequency listed in the CFS;
- (d) 121.5 MHz; or
- (e) HF 5680 kHz, if so equipped.

If you cannot contact anyone, a search will begin at the times mentioned above. At the appropriate time, switch your ELT to "ON", and leave it on until search crews locate you. Once located, use your aircraft radio on 121.5 MHz (turn ELT off if there is interference) to advise the SAR crew of your condition and intentions. ELTs and the COSPAS-SARSAT system work together to speed rescue. The ELT "calls for help." COSPAS-SARSAT hears that call, and promptly notifies SAR authorities, who then dispatch help. Delays in activating your ELT will delay your rescue.

SEARCH AND RESCUE (Cont'd)

Maximizing Your Emergency Signal:

If the ELT is a portable model with its own auxiliary antenna, and can be safely removed from the aircraft, it should be placed as high as possible on a level surface to reduce obstructions between it and the horizon. Raising an ELT from ground level to 2.44 m (8 ft) may increase the range by 20 to 40 percent. The antenna should be vertical to ensure optimum radiation of the signal. Placing the transmitter on a piece of metal, or even the wing of the aircraft, if it is level, will provide the reflectivity to extend transmission range. Holding the transmitter close to the body in cold weather will not significantly increase battery power output. As the body will absorb most of the signal energy, such action could reduce the effective range of the transmission.

If the ELT is permanently mounted in the aircraft, ensure that it has not been damaged and is still connected to the antenna. If it is safe to do so (i.e. no spilled fuel or fuel vapours), confirm the ELT's operation by selecting 121.5 MHz on the aircraft radio and listening for the audible siren-like tone.

Reminder: The search will be conducted to locate the aircraft. If the aircraft lands in an uninhabited area, stay with the aircraft and the ELT. The aircraft is easier to see than people are. If possible, have smoke, flares or signal fires ready to attract the attention of search crews who are homing to the ELT. Smoke, flares and signal fires should be sited with due regard for any spilled fuel resulting from the crash.

AIRCRAFT RADIOS

If your radio is serviceable, you can use it to send a distress message. Aircraft battery life will be limited so you will have to decide when to transmit. The choice will be between saving the radio until after your ELT has run down as compared to transmitting a MAYDAY regularly in expectation of a ground station or passing aircraft hearing the signal. Be prepared to transmit your MAYDAY blind, i.e. don't expect a reply. Also, if you know your position or approximate position, include it in the MAYDAY.

The frequency 121.5 MHz (VHF) and 243 MHz (UHF) are international voice distress frequencies, with 121.5 MHz monitored by many high-flying aircraft. If it is on, your ELT may interfere with a voice transmission on this frequency. Choose instead a working frequency that ground stations or passing aircraft are likely to monitor. In Canada, VFR aircraft are advised to monitor 126.7 MHz when operating en-route in uncontrolled airspace.

If you have an HF radio, it might be more effective than VHF or UHF. The HF's range of several thousand miles is much greater than the line-of-sight capability of VHF and UHF, and for this reason, is particularly useful in uninhabited and off-airways areas. The recommended HF frequency is 5680 KHz, a long-range communications channel monitored by many flight information centres for remote areas of Canada. The recommended time for voice distress signals is 15 and 45 minutes after each hour for 3 minutes' duration. Canada maintains two networks of direction-finding stations that can pinpoint the source of HF transmissions made anywhere in the country.

GROUND-TO-AIR SIGNALS

Even if no ELT or distress signal has been received, a visual search will commence at the time indicated in the flight plan or flight itinerary. The search in Canada will typically extend up to 15 NM on either side of the flight-planned route, starting from the aircraft's last known position and concluding just beyond its destination. In mountainous regions, the search area will be defined to best suit the terrain and route of flight.

Some searches may last at least 24 hr before rescue is accomplished. Make the accident site as conspicuous as possible. Searchers will be looking for anything out of the ordinary, and their eyes will be drawn to any unnatural feature on the ground. The aircraft has the best chance of being spotted if large portions of its wings and tail are painted in vivid colours. Keep the aircraft cleared of snow.

As soon as possible after landing, and with due concern for spilled fuel or vapours, build a campfire. Collect a large pile of green material (e.g. tree boughs, fresh leaves, grasses) to quickly place on the fire should an aircraft be seen or heard. Three signal fires forming a triangle is the standard distress signal, but even one large smoky fire should attract the attention of searchers.

One of the best high-visibility items now available on the market is a cloth panel of brilliant fluorescent colour, often referred to as a "conspicuity panel." It is staked to the ground during the day and used as a highly effective ground signal. It can also be used as a lean-to shelter and can supply some warmth as a blanket. Other means of attracting attention are reflecting sunlight using signal mirrors or shiny pieces of metal during daylight; or using flashlights, headlamps, strobes, or even camera flashes during hours of darkness.

F6 EMERGENCY

SEARCH AND RESCUE (Cont'd)

The following symbols are to be used to communicate with aircraft when an emergency exists.
Symbols 1 to 5 are internationally accepted; 6 to 9 are for use in Canada only

TABLE 1		
NO.	MESSAGE	CODE SYMBOL
1	Require assistance	V
2	Require medical assistance	X
3	No or negative	N
4	Yes or affirmative	Y
5	Proceeding in this direction	↑

TABLE 2		
NO.	MESSAGE	CODE SYMBOL
6	All is well	LL
7	Require food and water	F
8	Require fuel and oil	L
9	Need repairs	W

NOTE:

- Use strips of fabric or parachutes, pieces of wood, stones or any other available material to make the symbols.
- Endeavour to provide as big a colour contrast as possible between the material used for the symbols and the background against which the symbols are exposed.
- Symbols should be at least 8 ft. in height or larger, if possible. Care should be taken to lay out symbols exactly as depicted to avoid confusion with other symbols.
- A space of 10 feet should separate the elements of symbol 6.

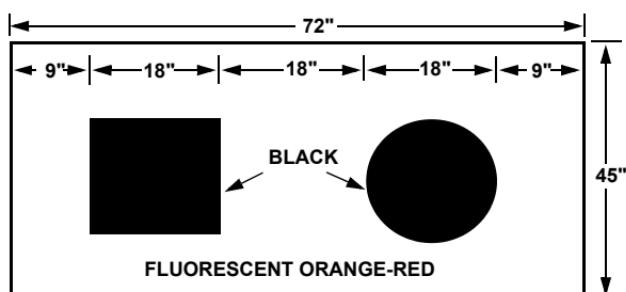

PROCEDURES WHEN SPOTTING SOMEONE IN DISTRESS

When a pilot observes an aircraft or surface craft in distress, he shall, if possible:

- (a) keep the craft in sight until such time as his presence is no longer necessary;
- (b) If his position is not known, attempt to establish it;
- (c) report to the Rescue Co-ordination Centre or Air Traffic Control Unit the following information:
 - time of observation
 - position of craft
 - general description of scene
 - apparent physical condition of persons.

SMALL CRAFT DISTRESS SIGNALS

Small craft may display distress or urgency signals as shown below

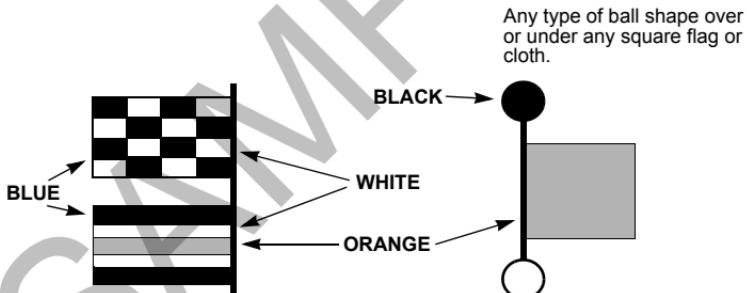

SEARCH AND RESCUE (Cont'd)**DIRECTIONS TO SHIPS:**

Signals used by aircraft engaged in search and rescue operations to direct ships towards an aircraft, ship or person in distress.

- (a) CIRCLE the vessel at least once.
- (b) CROSS the vessel's projected course close AHEAD at low altitude while ROCKING the wings (see note).
- (c) HEAD in the direction in which vessel is to be directed.
- (d) When assistance of the vessel is no longer required, CROSS the vessel's wake close ASTERN at low altitude while ROCKING the wings (see note).

NOTE: Opening and closing the throttle or changing the propeller pitch may also be practiced as an alternative means of attracting attention to that of rocking wings. However, this form of sound signal may be less effective than the visual signal of rocking the wings owing to high noise level on board the vessel.

WATER CRAFT will normally change direction if able to comply. If unable to comply, it will hoist International flag "N" or give other visual signals. Crossing the stern of the boat at low altitude, opening and closing the throttle or changing the propeller pitch will indicate that the assistance of the boat is no longer required.

INTERNATIONAL FLAG "N" over "C"

AVOIDANCE OF SEARCH AND RESCUE AREAS

It has been reported that pilots of private and commercial aircraft, not under the control of the Canadian Forces during air searches, are seriously interfering with and jeopardizing the safety of aircraft engaged in search operations.

Such interference is occasioned by pilots flying unnecessarily through the search area, whose bounds have been established at the commencement of the search by a NOTAM, at heights below 2,000 feet above ground level.

In the interest of safety, and efficient search and rescue operations, pilots of aircraft not engaged in this activity are to avoid airspace in the area specified by NOTAM whenever possible. Extreme caution should be exercised whenever it is necessary to enter this airspace.

F8 EMERGENCY**EMERGENCY RADAR ASSISTANCE**

- Emergency radar assistance is available on a 24 hour basis to identified aircraft within the limits of any Air Defense Identification Zone. The military radar system can at the discretion of the operator, provide the following services to aircraft; track, ground speed checks, position and bearing to the nearest airport or other designated points. Canadian military assistance provides bearing in degrees true. The radar assistance provided is advisory only and does not absolve the aircraft commander of the responsibility for safe navigation of the aircraft and compliance with air traffic control clearance or other required procedures.
- Contact the Sector Air Operations Centre (SAOC) on frequencies 121.5 and 243.0. In the Domestic ADIZ, 364.2 is also available. Example: "Radar Assistance," aircraft call sign. Subsequent calls should address the specific ROCC answering the initial call.

EMERGENCY SURVEILLANCE RADAR APPROACHES:

Surveillance radar approaches will be provided by ATC, if:

- ATC radar coverage is adequate,
- no alternative method of approach is available, and
- the pilot declares an emergency and requests a radar approach.

NOTE: NAV CANADA radars are not flight-checked or commissioned for surveillance approaches, nor are NAV CANADA controllers specifically trained to conduct them.

EMERGENCY COMMUNICATIONS PROCEDURES**DEGREES OF EMERGENCY:**

Type	Radio	R/T Signal	C/W Signal Usage
DISTRESS	MAYDAY	SOS	When you are threatened by serious and imminent danger and require immediate assistance, (ditching, crash landing, bailout, etc.). To give distress message for others unable to transmit. To relay a distress message. A distress message has priority over all other messages.
URGENCY	PAN PAN	XXX	When your situation requires urgent action, but is not actual distress (lost, fuel shortage, etc.). To report concerning the safety of an aircraft, ship or other vehicle or of some person on board or within sight. An urgency message has priority over all other messages except distress.

COMMUNICATION PROCEDURES:

- Switch on all automatic emergency equipment.
- Transmit appropriate distress call on A/G freq in use or on 121.5 followed by the distress message.

NOTE: 121.5 MHz may also be used to establish communications when the aircraft is not equipped with the published frequencies or when equipment failure precludes the use of normal channel.

Aircraft equipped with satellite voice communication equipment may call the appropriate Air Traffic Services Unit using the following short codes or public switched telephone network (PSTN) numbers:

Location	Short Code	PSTN Number
Gander Oceanic FIR	431603	1-709-651-5260
Gander Domestic FIR	431602	1-709-651-5297
Gander Radio	431613	1-709-651-5328
Moncton FIR	431604	1-506-867-8745
Montréal FIR	431605	1-514-633-3606
Toronto FIR	431606	1-905-405-8684
Winnipeg FIR	431608	1-204-837-9481
Edmonton FIR	431601	1-780-890-2775
Vancouver FIR	431607	1-604-507-7875

EMERGENCY COMMUNICATIONS PROCEDURES (Cont'd)**MESSAGE FORM:**

1. (a) VOICE - MAYDAY, MAYDAY, MAYDAY, THIS IS, aircraft call sign (3 times).
(b) CW - SOS, SOS, SOS, aircraft call sign (3 times).
2. TYPE OF AIRCRAFT.
3. POSITION OR ESTIMATED POSITION (state which) and TIME (when geographic coordinates are used, express latitude and longitude in "degrees and minutes".)
4. HEADING (state true or magnetic) AND INDICATED AIRSPEED.
5. ALTITUDE or FLIGHT LEVEL.
6. NATURE OF EMERGENCY.
7. PILOT'S INTENTIONS (bail out, ditching, crash landing, etc.).

CANCELLATION:

When the aircraft is no longer in distress, transmit a message cancelling the state of distress on the same frequency if possible, as was used for the distress call.

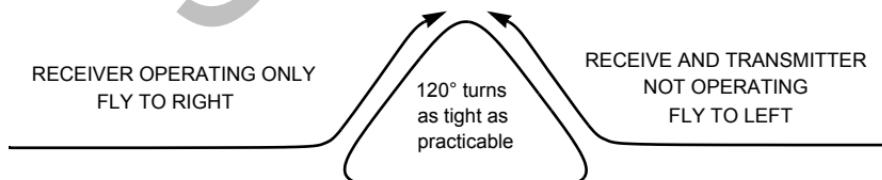

IFF/SIF/TRANSPONDER OPERATION

Emergency IFF Control Box - Select Emergency
SIF and Transponder - Mode A/3 Code 7700

Communication Failure Mode A/3 Code 7600

RADAR ALERTING MANOEUVRES:

1. When lost or in distress and unable to make radio contact, attempt to alert all available radar systems as follows:
 - (a) activate IFF/SIF to EMERGENCY;
 - (b) guard emergency frequencies;
 - (c) fly two triangular patterns as depicted, resume course, repeat at 5 minute intervals.

**TAS 300 Kts or less - fly TWO minute legs
TAS more than 300 Kts - fly ONE minute legs**

2. If distressed aircraft is flying at night or in limited visibility, landing lights, navigation lights should be turned on to assist the interceptor.
3. If radar contact is established, a rescue aircraft will be dispatched for intercept.
4. Upon successful interception the interceptor and the distressed aircraft should attempt radio contact. If this is not possible, the following visual signals should be used.

NOTE: If flying at a low altitude an attempt should be made to climb, as the greater the altitude of the aircraft, the better chances of its being detected.

NOTE: For more detailed information on radar coverage see TC AIM SAR.

F10 EMERGENCY

TWO WAY COMMUNICATIONS FAILURE

It is impossible to provide regulations and procedures applicable to all possible situations associated with two-way communications failure. During a communications failure when confronted by a situation not covered in the regulations, pilots are expected to exercise good judgement in whatever action they elect to take. The following procedures are the standard communications failure procedures. However, they may be superseded by specific procedures which take precedence. For example, some missed approach and SID procedures may have specific published communications failure procedures.

GENERAL: Unless otherwise authorized by ATC, the pilot-in-command of an aircraft that experiences a two-way communications failure when operating in or cleared to enter controlled airspace under IFR, or is operating in or cleared to enter Class B or C airspace under VFR shall:

1. if transponder equipped-select the transponder to reply to Mode A/3 code 7600 interrogations;
2. maintain a listening watch on appropriate frequencies for control messages or further clearances; acknowledge receipt of any such messages by any means available, including selective use of the normal/standby functions of transponders; and
3. attempt to contact any ATC facility or another aircraft and inform them of the difficulty and request they relay information to the ATC control facility with whom communications are intended.
4. NAV CANADA publishes the phone numbers of area control centres, control towers, flight information centres and flight service stations in the Canada Flight Supplement. In the event of an in-flight radio communications failure, and only after normal communications failure procedures have been followed (see TC AIM RAC), the pilot in command may attempt to contact the appropriate NAV CANADA air traffic services unit by means of a cellular telephone.

IFR FLIGHT PLAN

1. **Visual Meteorological Conditions:** If the failure occurs in visual meteorological conditions, or if visual meteorological conditions are encountered after the failure, the pilot-in-command shall continue the flight under VFR and land as soon as practicable.

NOTE: This procedure applies in any class of airspace. The primary purpose is to preclude extended IFR operation in controlled airspace in visual meteorological conditions. However, it is not intended that the requirement to "land as soon as 'practicable'" be construed to mean "land as soon as 'possible'". The pilot retains the prerogative of exercising his/her best judgement and is not required to land at an unauthorized airport, at an airport unsuitable for the type of aircraft flown, or to land only minutes short of destination.

2. **Instrument Meteorological Conditions:** If the failure occurs in instrument meteorological conditions, or if the flight cannot be continued under visual meteorological conditions, the pilot-in-command shall continue the flight according to the following:

(a) **Route**

- (i) by the route assigned in the last ATC clearance received and acknowledged; or
- (ii) if being radar vectored, by the direct route from the point of communications failure to the fix, route, or airway specified in the vector clearance; or
- (iii) in the absence of an assigned route, by the route that ATC has advised may be expected in a further clearance; or
- (iv) in the absence of an assigned route or a route that ATC has advised may be expected in a further clearance, by the route filed in the flight plan.

(b) **Altitude**

At the HIGHEST of the following altitude or flight levels for the ROUTE SEGMENT BEING FLOWN:

- (i) the altitude(s) or flight level(s) assigned in the last ATC clearance received, and acknowledged; or
- (ii) STAR charted altitude(s) or flight level(s); or
- (iii) the minimum IFR altitude (see TC AIM, RAC for definition); or
- (iv) the altitude or flight level ATC has advised may be expected in a further clearance. (The pilot shall commence climb to this altitude/FL at the time or point specified by ATC to expect further clearance/altitude change.)

TWO WAY COMMUNICATIONS FAILURE (Cont'd)

Note 1: The intent of the above is that an aircraft which has experienced communications failure will, during any segment of a flight, be flown at an altitude that provides the required obstacle clearance.

Note 2: If the failure occurs while being vectored at a radar vectoring altitude which is lower than a published IFR altitude, then the pilot shall immediately climb to and maintain the appropriate minimum IFR altitude until arrival at the fix, route or airway specified in the clearance.

(c) Descent for Approach

(i) Route includes a STAR procedure

1. Maintain the appropriate altitude described in paragraph b. "Altitude"; and
2. Follow the transition for the arrival runway:
 - ATC has advised may be expected; or
 - Advertised on the ATIS;

Conventional STAR

Follow the lateral path of the procedure up to where radar vectors are depicted to commence; then execute a straight-in approach.

Closed PBN STAR

Follow the lateral path of the procedure and execute a straight-in approach.

Open PBN STAR

With DTW & FACF	<ol style="list-style-type: none">1. Follow the lateral path of the procedure up to the DTW; then2. Proceed direct the FACF and execute a straight-in approach; <p style="text-align: center;">or</p> <ol style="list-style-type: none">1. Follow the lateral path of the procedure up to where radar vectors are depicted to commence; then2. Execute a straight-in approach.
Without DTW & FACF	<ol style="list-style-type: none">1. Follow the lateral path of the procedure up to the waypoint interfacing with an RNAV (RNP) or RNAV (GNSS) or ILS approach; then2. Execute a straight-in approach; <p style="text-align: center;">or</p> <ol style="list-style-type: none">1. Follow the lateral path of the procedure up to where radar vectors are depicted to commence; then2. Execute a straight-in approach.

F12 EMERGENCY

TWO WAY COMMUNICATIONS FAILURE (Cont'd)

- (ii) Route does not include a STAR procedure

Maintain enroute altitude to the navigation facility or the approach fix to be used for the instrument approach procedure selected and commence an appropriate descent procedure at whichever of the following times is the most recent:

1. the expected time of arrival (ETA as calculated from take-off time plus the filed or amended (with ATC) estimated time enroute);
2. the estimated time of arrival last notified to and acknowledged by ATC; or
3. the expected approach time (EAT) last received and acknowledged

If failure occurs after receiving and acknowledging a holding instruction, hold as directed and commence an instrument approach at the expected approach time or expected further clearance time, whichever has been issued.

NOTE: If the holding fix is not a fix from which an approach begins, leave the fix at the expected further clearance time if one has been received, or, if none has been received, upon arrival over the clearance limit, and proceed to a fix from which an approach begins. Commence descent and/or approach as close as possible to the estimated time of arrival as calculated from the filed estimated time enroute or as amended with ATC.

For flights to the United States, communication failure procedures are essentially the same, but it is the pilots responsibility to consult the appropriate American publications.

Some instrument procedures do not include a procedure turn but include a statement, "RADAR REQUIRED", as part of the procedure. The initial approach segment of these instrument procedures is being provided by ATC radar vectors. Without ATC radar vectoring, the instrument procedure may not have a published initial approach segment.

- (iii) the expected approach time (EAT) last received and acknowledged

If failure occurs after receiving and acknowledging a holding instruction, hold as directed and commence an instrument approach at the expected approach time or expected further clearance time, whichever has been issued.

Note 1: If the holding fix is not a fix from which an approach begins, leave the fix at the expected further clearance time if one has been received, or, if none has been received, upon arrival over the clearance limit, and proceed to a fix from which an approach begins. Commence descent and/or approach as close as possible to the estimated time of arrival as calculated from the filed estimated time enroute or as amended with ATC.

Note 2: If cleared for a conventional or RNAV STAR, maintain the appropriate altitude described in paragraph b. "Altitude" and proceed to the final approach fix via:

- (a) the published routing; or
- (b) the published routing to the segment where radar vectors are depicted to commence, then direct to the facility or fix serving the runway advertised on the ATIS or specified in the ATC clearance, for a straight-in approach, if able, or to conduct the full procedure if one is published.
- (c) for a closed RNAV STAR, by flying the arrival as published, including any vertical and/or speed requirements depicted in the procedure, and intercepting the final approach course for a *straight-in approach*; or
- (d) for an open RNAV STAR, by flying the arrival as published, including any vertical and/or speed requirements depicted in the procedure. The pilot is expected to delete the heading leg at the downwind termination waypoint (DTW), to initiate an auto-turn at the DTW to the final approach course fix (FACF) and to intercept the final approach course for a *straight-in approach*.

For flights to the United States, communication failure procedures are essentially the same, but it is the pilots responsibility to consult the appropriate American publications.

Some instrument procedures do not include a procedure turn but include a statement, "RADAR REQUIRED", as part of the procedure. The initial approach segment of these instrument procedures is being provided by ATC radar vectors. Without ATC radar vectoring, the instrument procedure may not have a published initial approach segment.

TWO WAY COMMUNICATIONS FAILURE (Cont'd)

Should an aircraft communication failure occur while being vectored on one of these approaches, separately or as part of a STAR, the pilot is expected to comply with the communication failure procedure by selecting the transponder to MODE A/3 CODE 7600 immediately. Pilots should always be aware of the traffic situation, (i.e., ATC may have indicated that your aircraft was number two for an approach to runway 06L), and under these circumstances continue the flight along the route that normally would have been expected under radar vectoring. In some cases, this may necessitate a pilot to "dead reckon" or "DR" a route to the final approach course. It is important to other aircraft and ATC for the communication failed aircraft to continue the flight along a route that would permit the aircraft to conduct a straight-in approach and landing without unexpected manoeuvring. Pilots are expected to exercise good judgment in these cases. Unexpected manoeuvres, such as turns away from the final approach course, may cause traffic disruptions and conflicts.

If the communication failure occurs while being vectored at a radar vectoring altitude which is lower than a published IFR altitude (i.e., Minimum Sector Altitude 25 NM), the pilot shall immediately climb to and maintain the appropriate minimum IFR altitude until arrival at a fix associated with the instrument procedure.

Modern technology has introduced new onboard communications capabilities, such as airborne telephone communications. Pilots who are confronted with an aircraft communications failure may, if circumstances permit, utilize this new onboard technology to establish communications with the appropriate ATC units. NAV CANADA publishes the phone numbers of ACCs, control towers, and FSS units in the *Canada Flight Supplement*.

NORTH ATLANTIC TRAFFIC

The following procedures are intended to provide general guidance for North Atlantic (NAT) aircraft experiencing a communications failure. These procedures are intended to complement and not supersede state procedures/regulations, as contained in the preceding section under "TWO WAY COMMUNICATIONS FAILURE" (pages F9 to F11). It is not possible to provide guidance for all situations associated with a communications failure.

1. General
 - (a) If so equipped, the pilot of an aircraft experiencing a two-way radio communications failure shall operate the secondary radar transponder on identity (Mode A) Code 7600 and Mode C.
 - (b) The pilot shall also attempt to contact any ATC facility and inform them of the difficulty and request they relay information to the ATC facility with whom communications are intended.
2. Communications Failure Prior To Entering NAT Oceanic Airspace
 - (a) If operating with a received and acknowledged oceanic clearance, the pilot shall enter oceanic airspace at the cleared oceanic entry point, level and speed, and proceed in accordance with the received and acknowledged oceanic clearance. Any level or speed changes required to comply with the oceanic clearance shall be completed within the vicinity of the oceanic entry point. The 'cleared oceanic flight level' is the flight level contained in the oceanic clearance.
 - (b) If operating without a received and acknowledged oceanic clearance, the pilot shall enter oceanic airspace at the first oceanic entry point, level and speed, as contained in the filed flight plan and proceed via the filed flight plan route to landfall. The first oceanic level and speed shall be maintained to landfall.
3. Communications Failure Prior to Exiting NAT Oceanic Airspace
 - (a) If cleared on flight plan route, the pilot shall proceed in accordance with the last received and acknowledged oceanic clearance to the last specified oceanic route point, normally landfall, then continue on the flight plan route. Maintain the last assigned oceanic level and speed to landfall. After passing the last specified oceanic route point, conform with the relevant State procedures/regulations.
 - (b) If cleared on other than flight plan route, the pilot shall proceed in accordance with the last received and acknowledged oceanic clearance, including level and speed, to the last specified oceanic route point, normally landfall. After passing this point, the pilot shall conform with the relevant State procedures and regulations, rejoining the filed flight plan route by proceeding, via published ATS routes where possible, to the next significant point ahead as contained in the filed flight plan.

F14 EMERGENCY

TWO WAY COMMUNICATIONS FAILURE (Cont'd)

- (c) Pilots of re-routed westbound aircraft exiting the NAT at FL290 and above must not program the FMS with the filed Oceanic Exit Point following the cleared Oceanic Exit Point. To re-establish on flight planned route, pilots must program the FMS with the next significant point on the original flight plan beyond the filed Oceanic Exit Point. For example if flight planned CUDDY HO but re-routed AVUTI, pilots must insert HO after AVUTI as opposed to CUDDY after AVUTI. Position reports that indicate AVUTI (OEP) CUDDY (OEP) require ATC intervention whereas AVUTI HO does not.

INFORMATION SIGNALS

Fuel Status. Make drinking motion with closed hand, thumb extended toward mouth. Report estimated flying time remaining at present cruise condition, by extending fingers, each finger to indicate ten minutes, a closed hand indicating one hour. (Example: clenched fist followed by three fingers will mean one hour and a half.)

System	Preparatory Signal	Execution Signal
(a) Airbrakes in or out	Biting motion with hand; fingers and thumb meeting and opening alternately.	Nod of head
(b) Flaps up or down	Hand flat - Fingers forward. Downward motion of hand from wrist to lower flaps - reverse motion to raise flaps.	Nod of head
(c) Landing gear up or down	To signal intent to extend or retract the undercarriage, hold a closed hand forward of your head and rotate it in a circular motion in the vertical plane.	Nod of head

Note 1: Preparatory signals will be given at least twice.

Note 2: The execution signal is to be given when aircraft in formation are ready to activate the appropriate system.

Request Tower Permission to Land. Fly aircraft past the tower, if possible alongside the runway parallel to the landing direction at a height of 500 feet (150 metres) - with all available lights flashing, slowly rocking wings until the upwind end of the runway is reached. Climb and turn downwind checking for light or pyrotechnic signals from the tower or mobile control (if available). Exercise extreme caution to avoid other aircraft.

MILITARY VISUAL SIGNALS**DAY EMERGENCY:**

Attention will first be attracted by rocking the wings of the aircraft laterally.

Bailing Out. One or both clenched fists pulled downwards across the face to simulate pulling the ejection blind.

Desire to Land. Movement of the hand, flat, palm downwards, from above the head forward and downwards, finishing the movement in a simulated round-out. Alternatively, lower the landing gear.

Systems Failures. The HEFOE signals are to be used only when radio contact is not possible. The pilot will clench his fist and hold it to the top of the canopy. After this signal he will show the required number of fingers to indicate which system is malfunctioning.

- (a) Hydraulic - one finger;
- (b) Electrical - two fingers;
- (c) Fuel - three fingers;
- (d) Oxygen - four fingers;
- (e) Engine - five fingers;

The pilot receiving the signal will repeat it to show acknowledgment.

If either the one finger signal is received or the intercepting pilot is unable to understand the signal given, he is to assume that the aircraft in distress has one or more systems inoperative and is to proceed with extreme caution.

Radio Failure. Tap microphone or earphone and signal as appropriate.

THUMBS-UP or THUMBS-DOWN. The signals will indicate satisfaction or dissatisfaction.

MILITARY VISUAL SIGNALS (Cont'd)

NIGHT EMERGENCY:

Attention will first be attracted by switching on the landing light(s), or taxi light(s) or by other means of illumination. Because night signals will be difficult to understand only one night signal shall be used:

- (a) Repeated intermittent Flashes with a flashlight. This signal indicates that the aircraft is in distress and wishes to land as soon as possible. The intercepting aircraft should assume that the aircraft in distress has one or more inoperative systems and is to proceed with extreme caution.
- (b) Care should be taken not to dazzle the other pilot with the flashlight.

INTERCEPTION OF CIVIL AIRCRAFT

Interceptions are made only where the possibility is considered to exist that an unidentified aircraft may be truly hostile until definitely proven to the contrary. Intercepted aircraft should maintain a steady course and under no circumstances take retaliatory action such as shining a light on an interceptor or attempt evasive action. Retaliatory action on the part of an intercepted aircraft could be construed a hostile intent and might result in drastic consequences.

Practice interceptions are not carried out on civil aircraft

INTERCEPTION SIGNALS

The word "interception" in this context does not include intercept and escort service provided, on request, to an aircraft in distress, in accordance with the ICAO Search and Rescue Manual (Doc. 9731).

An aircraft which is intercepted by another aircraft shall immediately:

- (a) follow the instructions given by the intercepting aircraft, interpreting and responding to visual signals (see following page);
- (b) notify, if possible, the appropriate air traffic services unit;
- (c) attempt to establish radio communication with the intercepting aircraft or with the appropriate intercept control unit, by making a general call on the emergency frequency 121.5 MHz and repeating this call on the emergency frequency 243.0 MHz, if practicable giving the identify and position of the aircraft and the nature of the flight;
- (d) if equipped with transponder select Mode A Code 7700, unless otherwise instructed by the appropriate air traffic services unit.

If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual or radio signals, the intercepted aircraft shall request immediate clarification while continuing to comply with the instructions given by the intercepting aircraft.

F16 EMERGENCY

SIGNALS FOR USE IN THE EVENT OF INTERCEPTION

SIGNALS INITIATED BY INTERCEPTING AIRCRAFT AND RESPONSES
BY INTERCEPTED AIRCRAFT

SERIES	INTERCEPTING AIRCRAFT SIGNALS	MEANING	INTERCEPTED AIRCRAFT RESPONDS	MEANING
1	<p>DAY-Rocking wings from a position in front and, normally, to the left of intercepted aircraft and, after acknowledgment, a slow level turn, normally to the left, on to the desired heading.</p> <p>Flares dispensed in immediate vicinity.</p> <p>NIGHT - Same and, in addition flashing navigational lights at irregular intervals.</p> <p>Flares dispensed in immediate vicinity.</p> <p>NOTE 1. Meteorological conditions or terrain may require the intercepting aircraft to take up a position in front and to the right of the intercepted aircraft and to make the subsequent turn to the right.</p> <p>NOTE 2. If the intercepted aircraft is not able to keep pace with the intercepting aircraft, the latter is expected to fly a series of race-track patterns and to rock its wings each time it passes the intercepted aircraft.</p>	You have been intercepted Follow me.	<p>AEROPLANES: DAY - Rocking wings and following.</p> <p>NIGHT - Same and, in addition flashing navigational lights at irregular intervals.</p> <p>HELICOPTERS: DAY or NIGHT - Rocking aircraft, flashing navigational lights at irregular intervals and following.</p> <p>NOTE - Additional action by intercepted aircraft is prescribed on preceding page in para "INTERCEPTION SIGNALS"</p>	Understood, will comply.
2	DAY or NIGHT - An abrupt breakaway manoeuvre from the intercepted aircraft consisting of a climbing turn of 90 degrees or more without crossing the line of flight of the intercepted aircraft.	You may proceed.	<p>AEROPLANES: DAY or NIGHT - Rocking wings.</p> <p>HELICOPTERS: DAY or NIGHT - Rocking aircraft.</p>	Understood, will comply.
3	<p>DAY - Circling aerodrome, lowering landing gear and overflying runway in direction of landing or, if the intercepted aircraft is a helicopter, overflying the helicopter landing area.</p> <p>NIGHT - Same and, in addition, showing steady landing lights.</p>	Land at this aerodrome.	<p>AEROPLANES: DAY -Lowering landing gear, following the intercepting aircraft and, if after overflying the runway landing is considered safe, proceeding to land.</p> <p>NIGHT-Same and, in addition showing steady landing lights (if carried).</p> <p>HELICOPTERS: DAY or NIGHT - Following the intercepting aircraft and proceeding to land, showing a steady landing light (if carried).</p>	Understood, will comply.

SIGNALS FOR USE IN THE EVENT OF INTERCEPTION

SIGNALS INITIATED BY INTERCEPTED AIRCRAFT AND RESPONSES
BY INTERCEPTING AIRCRAFT

SERIES	INTERCEPTED AIRCRAFT SIGNALS	MEANING	INTERCEPTING AIRCRAFT RESPONDS	MEANING
4	AEROPLANES: DAY - Raising landing gear while passing over landing runway at a height exceeding 300m (1000 ft) but not exceeding 600m (2000 ft) above the aerodrome level, and continuing to circle the aerodrome. NIGHT - Flashing landing lights while passing over landing runway at a height exceeding 300m (1000 ft) but not exceeding 600m (2000 ft) above the aerodrome level, and continuing to circle the aerodrome. If unable to flash landing lights, flash any other lights available.	Aerodrome you have designated is inadequate	DAY or NIGHT - If it is desired that the intercepted aircraft follow the intercepting aircraft to an alternate aerodrome, the intercepting aircraft raises its landing gear and uses the Series 1 signals prescribed for intercepting aircraft. If it is decided to release the intercepted aircraft, the intercepting aircraft uses the Series 2 signals prescribed for intercepting aircraft.	Understood Follow me. Understood you may proceed.
5	AEROPLANES: DAY or NIGHT - Regular switching on and off of all available lights but in such a manner as to be distinct from flashing lights.	Cannot comply.	DAY or NIGHT - Use Series 2 signals prescribed for intercepting aircraft.	Understood.
6	AEROPLANES: DAY or NIGHT - Irregular flashing of all available lights. HELICOPTERS: DAY or NIGHT - Irregular flashing of all available lights.	In distress	DAY or NIGHT - Use Series 2 signals prescribed for intercepting aircraft.	Understood.

F18 EMERGENCY**EMERGENCY SECURITY CONTROL OF AIR TRAFFIC (ESCAT) PLAN**

In Canadian airspace, the ESCAT Plan provides security control of civil and military air traffic to ensure effective use of airspace when an air defence emergency or any situation involving aerial activities that threatens national security or vital Canadian interests is declared by the appropriate authority. The Plan outline highlights responsibilities, procedures, and instructions for the security control of civil and military air traffic with respect to diversion, landing, grounding and dispersal. It was developed in coordination with the DND, Transport Canada, and NAV CANADA.

The Commander, Canadian NORAD Region (CANR), is responsible for testing and implementing the ESCAT Plan. When the ESCAT Plan is implemented or tested, the appropriate NAV CANADA ACCs (through ATS units), under the direction of the Canadian Forces Integrated Command Centre (CFICC), will take actions to broadcast instructions through civil and military ATS units as necessary.

Testing

To ensure effectiveness of communications during implementation of the ESCAT Plan, periodic tests may be conducted without any prior notice.

The test message will read as follows:

"ATTENTION-THIS IS AN ESCAT TEST. I SAY AGAIN, THIS IS AN ESCAT TEST."

As these tests are considered essential to national security, co-operation of all pilots and agencies is necessary.

Implementation

In an emergency situation, the appropriate NAV CANADA ACC (through their respective ATS units), under directions of the Commander, CANR, will broadcast the following message:

"ATTENTION ALL AIRCRAFT-AIR DEFENCE EMERGENCY-ALL AIRCRAFT WILL COMPLY WITH THE PROCEDURES FOR THE EMERGENCY SECURITY CONTROL OF AIR TRAFFIC. VFR TRAFFIC ON THIS FREQUENCY MUST LAND AT THE NEAREST SUITABLE AIRFIELD AND FILE AN IFR OR DVFR FLIGHT PLAN."

In accordance with CAR 602.146, the pilot-in-command of an aircraft that is notified by an ATS unit of the implementation of the ESCAT Plan shall

- (a) before take-off, obtain approval for the flight from the appropriate ATC unit or FSS;
- (b) comply with any instruction to land or to change course or altitude that is received from the appropriate ATC unit or FSS; and
- (c) provide the appropriate ATC unit or FSS with position reports
 - (i) when operating within controlled airspace, as required under CAR 602.125; and
 - (ii) when operating outside controlled airspace, at least every 30 min.

ESCAT PHASES

ESCAT may be executed in phases to facilitate a smooth transition from normal peacetime air traffic identification and control procedures to the more restrictive identification and control procedures that accompany the full implementation of ESCAT. When ESCAT has been implemented, the movement of civil and military aircraft is governed by the implementation of an ESCAT Air Traffic Priority List (EATPL) and/or a Security Control Authorization (SCA).

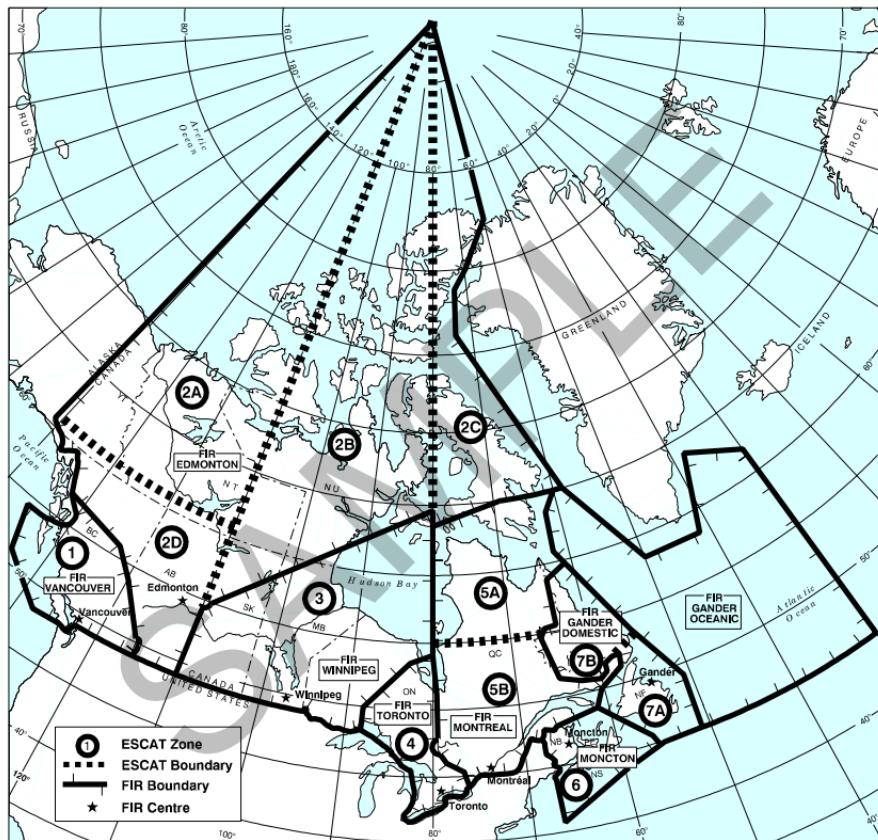

There are two phases in the implementation process.

1. *Phase One:* Requires all aircraft in designated areas to file IFR/DVFR flight plans in accordance with CAR 602.76(1) and (2), CAR 602.145, this Plan and the established procedures detailed in the GPH 205 Canada Flight Supplement.
2. *Phase Two:* The Commander CANR restricts aircraft movement within designated areas through implementation of the ESCAT Air Traffic Priority List (EATPL) and Security Control Authorization (SCA) process.

Note: EATPL and SCA approval request procedures will be promulgated by NOTAM.

ESCAT ZONES

For the purpose of implementing ESCAT, Canadian airspace has been divided into seven zones. These zones may be activated by one or more zones or portions of zones.

Note: Coordinates for ESCAT Zones are published in the Designated Airspace Handbook (TP1820)

Termination

The appropriate NAV CANADA ACC (through their respective ATS units), will broadcast the following message:

"ATTENTION ALL AIRCRAFT-EMERGENCY SECURITY CONTROL OF AIR TRAFFIC HAS BEEN TERMINATED. ROUTINE AIRSPACE PROCEDURES ARE NOW IN EFFECT."

For information about ESCAT, please contact Transport Canada Civil Aviation Contingency Operations (CACO) at 1-877-992-6853 or 613-992-6853 or NAV CANADA National Operations Centre: 613-563-5626 (Primary) & 613-563-5667 (Secondary).
